REYNOLDS, HENRY ROBERT (1825-1890), congregational divine, born at Romsey in Hampshire on 26 Feb. 1825, was the grandson of Henry Revell Reynolds [q. v.], and the elder son of John Reynolds (1782-1862), congregational minister, by his second wife, Sarah (z. 1868), daughter of Robert Fletcher of Chester and sister of Joseph Fletcher (1784-1843) [q. v.]. Sir John Russell Reynolds [q. v.] was his younger brother. Henry was educated chiefly by his father, and in September 1841 he entered Coward College, London (now incorporated in New College, South Hampstead) to prepare for the ministry. He matriculated at London University in the same year, obtaining the university mathematical scholarship in 1844 and graduating B.A. in 1848. In the same year he was made a fellow of University College, London.

In April 1848 he became pastor of the congregational church at Halesden in Essex, receiving permission to curtail his course at Coward College at the urgent request of the congregation. He was ordained on 16 July 1848. Among his congregation was the future missionary, Matthew Amore Sherring [q. v.], whose father was one of Reynolds's deacons. In 1849 Reynolds accepted a call to be minister of the East Parade chapel at Leeds, entering on his new duties on 28 March. The ten succeeding years were probably the most strenuous in his life. He took a keen interest in theological controversies of the day, and made an especial study of the writings of Auguste Comte, on whom he published a criticism in the 'British Quarterly Review' in April 1854. In 1855 his health gave way, and the labours of the next five years were diversified by visits to Egypt, Italy, and the south of France, and broken by frequent illness. During this period he and his brother, John Russell Reynolds, wrote a novel dealing with the intellectual and religious questions of the time, which was published anonymously in 1860 with the title 'Yes and No.'

In June 1860 Reynolds accepted the post of president of Cheshunt College, whither he removed in August. Besides fulfilling the duties of principal of the college and pastor of the college chapel and village churches, he was professor of dogmatic theology, ecclesiastical history, and New Testament exegesis. In addition to these he undertook serious literary labours. From 1866 to 1874 he was co-editor with Henry Allon [q. v. Suppl.] of the 'British Quarterly Review,' and from 1877 to 1882 he edited the 'Evangelical Magazine.' In 1870 and 1871 he edited two series of essays on church problems by

various writers, entitled 'Ecclesia' (London, 8vo), and in 1874 he published lectures on 'John the Baptist' in the new series of 'Congregational Union Lectures.' They reached a third edition in 1888. He wrote frequently for the 'Expositor,' and contributed to the 'Dictionary of Christian Biography.'

In 1869 Reynolds received the honorary degree of D.D. from Edinburgh University, and in the years immediately following he was engaged on the project of enlarging the Cheshunt College buildings, in celebration of the centenary of the institution. This work was completed in 1872. In 1888 appeared his most notable work, the 'Introduction' and 'Exposition' on the Gospel of St. John, contributed to the 'Pulpit Commentary.' In November 1894 failing health compelled him to resign the presidency of Cheshunt College, and in May 1895 he withdrew to Broxbourne in Hertfordshire. He died at Broxbourne on 10 Sept. 1896, and was buried in Cheshunt cemetery on 15 Sept. On 17 Dec. 1840, at Walworth chapel, he married Louisa Caroline (d. 11 Oct. 1895), only surviving daughter of Silas Palmer of Newbury, Berkshire. They had no children.

On 21 Sept. 1882 Reynolds's portrait, painted by Mr. Sydney Hodge, was presented to Cheshunt College by the past and present students. A replica was presented to Mrs. Reynolds.

Besides the works already mentioned, Reynolds was the author of: 1. 'The Beginnings of the Divine Life: a Course of Seven Sermons,' London, 1859, 8vo. 2. 'Notes on the Christian Life: a Selection of Sermons,' London, 1865, 8vo. 3. 'The Philosophy of Prayer and Principles of Christian Service; with other Papers,' London, 1881, 8vo. 4. 'Buddhism: a Comparison and a Contrast between Buddhism and Christianity' ('Present Day Tracts,' 2nd ser. No. 40), London, 1880, 8vo. 5. 'Athanasius: his Life and Lifework' (Church History Series, No. 5), London, 1889, 8vo. 6. 'Light and Peace: Sermons and Addresses' ('Preachers of the Age'), London, 1892, 8vo. 7. 'Lamps of the Temple, and other Addresses to Young Men,' London, 1895, 8vo. 8. 'Who say ye that I am?' ('Present Day Tracts,' No. 80), London, 1890, 8vo. He edited the 'Congregational Register for the West Riding of Yorkshire' (London, 8vo) from 1855 to 1857, and undertook in 1834, in conjunction with Owen Charles Whitehouse, the prophecies of Hosea and Amos in 'An Old Testament Commentary for English Readers.'

[Henry Robert Reynolds, his Life and Letters, edited by his Sisters (with portraits), 1898; Congregational Yearbook, 1897; Memoir prefixed to Reynolds's *Who say ye that I am?* 1896.] E. I. C.

REYNOLDS, SAMUEL HARVEY (1831-1897), divine and journalist, was the eldest son of Samuel Reynolds, F.R.C.S., a surgeon in practice in High Street, Stoke Newington, by Elizabeth, younger daughter of Harvey Walklett Mortimer, a gunsmith in the city of London and afterwards a member of the London Stock Exchange. His paternal grandfather was the Rev. John Reynolds, a Wesleyan minister and a personal friend of John Wesley. He was born in 1831, and was entered at Blundell's school, Tiverton, on 6 Feb. 1847, but left it in the following June. On the foundation of St. Peter's College, Radley, in 1847, he became (July) its first pupil, and afterwards (1897) wrote his reminiscences of the school. From Radley he was elected in 1850 to a scholarship at Exeter College, Oxford, placed in the first class in classics at moderations at Michaelmas 1852, and in the first class in *literæ humaniores* at Easter 1854. He obtained the Newdigate prize poem for English verse in 1853, the theme being 'The Ruins of Egyptian Thebes.' On 2 Feb. 1855 he was elected probationer fellow of Brasenose, and actual fellow on 2 Feb. 1856. He afterwards became tutor and bursar of the college. In 1856 he obtained the chancellor's prize for an English essay on 'The Reciprocal Action of the Physical and Moral Condition of Countries upon each other.' He proceeded M.A. in 1857. Intending to be called to the bar, he was admitted a student of Lincoln's Inn on 23 Oct. 1858 (*Lin. Inn Admission Register*, ii. 288), and for some time read in the chambers of equity counsel; but in consequence of an accident which injured his eyesight he abandoned the law and returned to residence in Brasenose. In 1860 he took deacon's orders. He devoted himself to college work, and filled in succession the offices of Latin lecturer, tutor, and bursar. In 1865 he was ordained priest. During 1860, 1867, and 1868 he was classical examiner in the university. He wrote in 1866 a small treatise on the 'Rise of the Modern European System.' This was intended to form part of a 'System of Modern History,' published by an Edinburgh firm. In 1870 he edited, for the series known as the 'Catena Classicorum,' the first twelve books of the 'Iliad' of Homer, with a preface and notes.

Reynolds was presented in March 1871 to the college living of East Ham, at that time

a comparatively small district of about two thousand souls. Soon afterwards he joined the staff of the 'Times,' and to the columns of that newspaper he contributed some two thousand leading articles between August 1873 and December 1890 upon a great variety of topics, literary, political, and financial. Some of these were reprinted in 1898, after his death, in a volume entitled 'Studies on many Subjects,' which also includes a selection of articles written for the 'Westminster Review' between 1861 and 1860. To these literary labours he added an edition with notes of Bacon's 'Essays' (1890) and of the 'Table-talk of John Selden' (1892). He resigned his living in December 1893, and removed to The Gables, Abingdon, 'to be near enough to the Bodleian for study, and not near enough to Oxford for society.' Here he devoted himself to literary pursuits; but as his health failed he sought from time to time the milder climate of the south of France. He died at Biarritz on 7 Feb. 1897, and was buried at that place two days later. He was a man of engaging social qualities, a good raconteur with a caustic wit. His literary style was lucid and terse.

He married, on 12 April 1871, Edith Claudia, daughter of the Rev. Claudius Sandys, military chaplain at Bombay, and granddaughter of Colonel Sandys of Llanarth, Cornwall. He left no issue.

[Private information; Rev. T. D. Raikes's *Sicut Columba: Fifty Years of St. Peter's College, Radley*, 1897, pp. 35-46; *Some Recollections of Radley in 1847*; W. Crouch's *Memoirs of the Rev. S. H. Reynolds*, reprinted from the *Essex Review*, vol. vi. No. 22, April 1897; Prefaces, &c., to *Studies on many Subjects*, I. S. L.]

RICHARDSON, Sir BENJAMIN WARD (1828-1896), physician, only son of Benjamin Richardson and Mary Ward his wife, was born at Somerby in Leicestershire on 31 Oct. 1828, and was educated by the Rev. W. Young Nutt at the Barrow Hill school in the same county. Being destined by the deathbed wish of his mother for the medical profession, his studies were always directed to that end, and he was early apprenticed to Henry Hudson, the surgeon at Somerby. He entered Anderson's University (now Anderson's College), Glasgow, in 1847, but a severe attack of famine fever, caught while he was a pupil at St. Andrews Lying-in Hospital, interrupted his studies, and led him to become an assistant, first to Thomas Browne of Saffron Walden in Essex, and afterwards to Edward Dudley Hudson

at Littlebury, Narborough, near Leicester, who was the elder brother of his former master.

In 1850 he was admitted a licentiate of the Faculty of Physicians and Surgeons of Glasgow, becoming faculty lecturer in 1877, and being enrolled a fellow on 3 June 1878. In 1854 he was admitted M.A. and M.D. of St. Andrews, where he afterwards became a member of the university court, assessor of the general council, and in 1877 an honorary LL.D. He was a founder and for thirty-five times in succession the president of the St. Andrews Medical Graduates' Association. He was admitted a member of the Royal College of Physicians of London in 1856, and was elected a fellow in 1865, serving the office of *materia medica* lecturer in 1866. He was elected a fellow of the Royal Society in 1867, and delivered the Croonian lecture in 1878 on 'The Muscular Irritability after Systemic Death.'

In 1849 he left Mr. Hudson and joined Dr. Robert Willis of Barnes, well known as the editor of the works of William Harvey, and librarian of the Royal College of Surgeons of England (1833-45). Richardson lived at Mortlake, and about this time became a member of 'Our Club,' where he met Douglas Jerrold, Thackeray, Hepworth Dixon, Mark Lemon, John Doran, and George Cruikshank, of whose will he became an executor.

Richardson moved to London in 1853-4, and took a house at 12 Hinde Street, whence he moved to 25 Manchester Square. In 1854 he was appointed physician to the Blenheim Street Dispensary, and in 1856 to the Royal Infirmary for Diseases of the Chest in the City Road. He was also physician to the Metropolitan Dispensary (1856), to the Marylebone and to the Margaret Street Dispensaries (1856), and in 1892 he became physician to the London Temperance Hospital. For many years he was physician to the Newspaper Press Fund and to the Royal Literary Fund, of the committee of which he was long an active member. In 1854 he became lecturer upon forensic medicine at the Grosvenor Place School of Medicine, where he was afterwards appointed the first lecturer on public hygiene, posts which he resigned in 1857 for the lectureship on physiology. He remained dean of the school until 1865, when it was sold and, with all the other buildings in the old Tattersall's yard, demolished. Richardson was also a lecturer about this time at the College of Dentists, then occupying a part of the Polytechnic Institution in Regent Street.

In 1854 Richardson was awarded the

Fothergillian gold medal by the Medical Society of London for an essay on the 'Diseases of the Feet in Utero'; in 1856 he gained the Astley Cooper triennial prize of 800 guineas for his essay on 'The Coagulation of the Blood.' In 1868 he was elected president of the Medical Society of London, and on several occasions he was president of the health section of the Social Science Association, notably in 1875, when he delivered a celebrated address at Brighton on 'Hygeia,' in which he told of what a city should be if sanitary science were advanced in a proper manner. In the same year he gave the Cantor lectures at the Society of Arts, taking 'Alcohol' as the subject. He was elected an honorary member of the Philosophical Society of America in 1868, and of the Imperial Leopold Carolina Academy of Sciences in 1867. He became a fellow of the Society of Antiquaries in 1877. In June 1893 he was knighted in recognition of his eminent services to humanitarian causes.

He died at 25 Manchester Square on 21 Nov. 1896, and his body was cremated at Brookwood, Surrey. He married, on 21 Feb. 1857, Mary J. Smith of Marlake, by whom he left two surviving sons and one daughter.

Richardson was a sanitary reformer, who busied himself with many of the smaller details of domestic sanitation which tend in the aggregate to prolong the average life in each generation. He spent many years in attempts to relieve pain among men by discovering and adapting substances capable of producing general or local anaesthesia, and among animals by more humane methods of slaughter. He brought into use no less than fourteen anaesthetics, of which methylene bichloride is the best known, and he invented the first double-valved mouthpiece for use in the administration of chloroform. He also produced local insensibility by freezing the part with an ether spray, and he gave animals euthanasia by means of a lethal chamber. He was an ardent and determined champion of total abstinence, for he held that alcohol was so powerful a drug that it should only be used by skilled hands in the greatest emergencies. He was, too, one of the earliest advocates of bicycling. In 1863 he made known the peculiar properties of amyl nitrite, a drug which was largely used in the treatment of breast-pain, and he introduced the bromides of quinine, iron, and strychnia, ozonised ether, etyptic and iodised colloid, peroxide of hydrogen, and ethylate of soda, substances which were soon largely used by the medical profession.

Richardson was one of the most prolific writers of his generation. He wrote biographies, plays, poems, and songs, in addition to his more strictly scientific work. He wrote the 'Asclepiad,' a series of original researches in the science, art, and literature of medicine. A single volume was issued in 1861, after which it appeared quarterly from 1884 to 1895. He was the originator and the editor of the 'Journal of Public Health and Sanitary Review' (1856). His contributed many articles, signed and unsigned, to the 'Lancet' and to the 'Medical Times and Gazette.'

RIGBY, ELIZABETH, afterwards **LADY EASTLAKE** (1800-1898), author. [See **EASTLAKE**.]

RIVERS, AUGUSTUS HENRY LANE FOX PITT (1827-1900), general and anthropologist. [See **PITT-RIVERS**.]

ROBERTS, SIR WILLIAM (1830-1899), physician, born at Bodedern, Anglesea, on 18 March 1830, was the eighth and youngest son of David Roberts, surgeon, of Llynedd-y-gof, and Sarah, his wife, daughter of Thomas Foulkes of Machynlleth, Montgomeryshire. He was educated at Mill Hill school, and entered University College, London, as a medical student in October 1849. Here he was early attracted to the study of physiology and graduated B.A. at the university of London in 1851, with the highest honours in chemistry and animal physiology. The same success attended him throughout his university career, and he graduated M.B. in 1853, after securing three gold medals, a scholarship, and an exhibition. In the same year he was admitted a licentiate of the Society of Apothecaries and a member of the Royal College of Surgeons of England, and in 1854 he graduated M.D. at the London University. He also pursued his medical studies in Paris and Berlin.

In 1854 Roberts was elected house-surgeon at the Manchester Royal Infirmary, and on 26 July 1855 was appointed full physician at the unusually early age of twenty-five; at the same time he became lecturer on anatomy and physiology in the Royal (Pine Street) School of Medicine at Manchester. In 1856 he was appointed lecturer on pathology, and in 1863 lecturer on the principles and practice

of medicine at the Owens College, with which the Royal School of Medicine had become united, and he became afterwards the first professor of medicine at the Victoria University, jointly with Dr. Morgan, holding the office from 1873 to 1876. In 1864 Roberts was so deeply interested in testing the value of the clinical thermometer, then newly re-introduced by Wunderlich (1815-1877), in cases of fever, that he nearly died of typhus contracted in the wards of the Royal Infirmary at Manchester.

At the Royal College of Physicians Roberts was admitted a member in 1860 and a fellow in 1865. He delivered the Gulstonian lectures in 1866 on the use of solvents in the treatment of urinary calculi and gout, and in 1880 he gave the Lumleian lectures on the digestive ferments, and on artificially digested foods. He was a councillor in 1882-3-4, and censor in 1889-90. In 1892 he delivered the Croonian lectures on the chemistry and therapeutics of uric acid, gravel, and gout, and he was the Harveian orator in 1897. He was elected a fellow of University College, London, in 1864, and on 7 June 1877 he became a fellow of the Royal Society, serving as a member of the council in 1890-1. He received the Cameron prize in 1879 for his contributions to practical therapeutics, more especially in relation to the dietetic treatment of disease, and at the meeting of the British Medical Association at Cardiff in 1885 he delivered an address on feeding the sick. When the association met in London in 1895 he was president of the section of pharmacology and therapeutics.

Roberts resigned the post of physician to the Royal Infirmary, Manchester, on 26 Feb. 1883, and in 1885 was knighted. He moved from Manchester to London in 1889, and in 1892 he was appointed a fellow of the university of London. Here he soon became an active member of the committee which manages the Brown Institution, and was elected chairman of the committee on the death of Sir Richard Quain [q. v. Suppl.] in 1897. From 1896 until his death he represented the London University on the General Medical Council, and in 1898 he was nominated a member of the statutory commission appointed to provide adequate university teaching in London. In 1893 he served as the medical member of the opium commission, and in this capacity visited India.

During the last twenty years of his life Roberts invariably spent some portion of each year at Bryn, his country residence, where he took the greatest interest in developing his

estate. He died in London on 16 April 1899, and is buried at Llanymawddwy, Merionethshire, a village near his house at Bryn.

He married, in 1869, Elizabeth, daughter of Richard Johnson, sometime president of the Manchester chamber of commerce. She died in 1874, leaving one son and a daughter, both of whom predeceased their father.

Roberts was an able physician, whose work covered a wide field, dealing with histology, physiology, and practical medicine. He was one of the first physicians in this country to show that a sound knowledge of physiology might be turned to excellent account in the treatment of disease, for it is to his especial honour that he introduced the practice of feeding invalids with foods digested outside the body—a method which has proved of the utmost service and has saved very many lives.

He published: 1. 'An Essay on Wasting Palsy (Cruveilhier's atrophy),' London, 1858, 8vo: the first systematic treatise on this disease in the English language. 2. 'On Peculiar Appearances exhibited by Blood-corpuscles under the Influence of Solutions of Magenta and Tannin,' London, 1863, 8vo. This short paper, contributed to the Royal Society, made the name of Roberts familiar to many generations of medical students, for it describes the appearances known as 'Roberts's maculae.' 3. 'A Practical Treatise on Urinary and Renal Diseases, including Urinary Deposits,' London, 1866, 8vo; 4th edit. (edited by Dr. Robert Maguire) 1885, 12mo. 4. 'On Spontaneous Generation and the Doctrine of Contagium Virum, being the Address in Medicine delivered at the Annual Meeting of the British Medical Association, London, 1877, 8vo. Roberts here records a number of carefully devised experiments dealing with the sterilisation of liquids, and arrived at the important conclusion that 'the organisms which appear as if spontaneously in decomposing fluids owe their origin to parent germs derived from the surrounding media.' 5. 'On the Digestive Ferments, and the Preparation and Use of Artificially Digested Food; being the Lumleian Lectures for the Year 1880,' 2nd edit. London, 1881, 8vo. 6. 'Lectures on Dietetics and Dyspepsia,' London, 1885, 8vo; 2nd edit. 1886. 7. 'Collected Contributions on Digestion and Diet,' London, 1891.

[The Life and Works of Sir William Roberts by the late D. J. Leech, M.D., with an appendix containing a list of the published writings compiled and chronologically arranged by C. J. Ollingworth, M.D.; the Medical Chronicle for June 1899, vol. xi. n.s.; British Medical Journal,

1890, i. 1063; personal knowledge; Royal Society Yearbook, 1901, pp. 202-5; private information.] D'A. P.

ROBINSON, SIR HERCULES GEORGE ROBERT, first **BARON ROSMEAD** (1824-1897), colonial governor, was the second son of Admiral Hercules Robinson [q. v.] of Rosmead, Westmeath, Ireland, and Frances Elizabeth, only daughter of Henry Widman Wood of Rosmead. His brother, Sir William Cleaver Francis Robinson [q. v. Suppl.], was also a successful colonial governor. His uncle, Sir Bryan Robinson [q. v.], was a judge in Newfoundland. Lord Rosmead was born on 19 Dec. 1824 and was educated at Sandhurst. He joined the army as second lieutenant in the 87th regiment (Royal Irish Fusiliers) on 27 Jan. 1843, became first lieutenant on 6 Sept. 1844, but retired in 1846, and accepted an appointment under the commissioners of public works for Ireland, and later under the poor law board. He did special service during the Irish famine of 1848. In 1852 he was appointed chief commissioner to inquire into the fairs and markets of Ireland.

On 3 March 1854 Robinson was appointed to one of those posts which for many years formed the nurseries of colonial governors, viz. that of president of Montserrat in the West Indies: he assumed office on 12 April 1854. This island he left in March 1855, and on 28 March arrived in the neighbouring island of St. Christopher, to which he was promoted as lieutenant-governor. The chief question in St. Christopher at this time was that of immigration from India, and it fell to Robinson to arrange for the introduction of a number of coolies. His brother, William Francis, began his colonial career under him here as superintendent of immigrants. In 1859 Hercules was promoted to be governor of Hong Kong, where he arrived on 9 Sept. 1859, so that he held the government during the war with China in 1860-1. He negotiated with the government of China for the cession of Kowloon, and carried out the arrangements for its annexation. He had also much to do in settling the finances and civil list of the colony. In 1863 he was a member of a commission to inquire into the financial position of the Straits Settlements. In 1865, on the expiration of the ordinary term of government, he went to Ceylon, arriving on 30 March 1865 at Galle, and assuming the government at Colombo the following day. Here he was brought into immediate contact with the question of developing a flourishing crown colony. Railway extension and telegraph construction were among the chief problems of the hour, and in such a colony the judgment of the governor is a leading factor in

the final determination of routes and the districts to be served. Robinson reorganised the public works department of the colony on the lines which have made it perhaps the most efficient works department in the colonies. He was on leave of absence in England from August 1868 to May 1869, and finally relinquished the government at the end of his term in January 1872, coming to this country again on leave.

In February 1872 Robinson was gazetted to the government of New South Wales: this promotion to one of the great colonies even at that time showed that he had, in the opinion of the crown, succeeded unusually well in his previous appointments. His record in New South Wales was of course interwoven with the acts of his ministries, the chief of which were led by Sir Henry Parkes [q. v. Suppl.] and Sir John Robertson [q. v.], but Hudson considers that his personal firmness did much towards teaching local politicians that the state came before party interest. He arrived at Sydney on 8 June 1872, and on 13 Aug. first met the local parliament in proroguing it at the end of its ordinary session. The question of border duties as between New South Wales and Victoria and South Australia was one of the chief matters which occupied attention in this and the ensuing year. In the middle of 1874 the case of the bush-ranger (gardiner) stirred a good deal of feeling, and the advice of ministers to the governor produced a vote of censure in the new parliament. Otherwise the politics of the period were not eventful. In September 1874, however, Robinson completed a work of national importance by negotiating the cession of the Fiji Islands, and he stayed at Suva administering the new government till the arrival of Sir Arthur Gordon (now Lord Stanmore), the first governor.

On 19 March 1879 Robinson left New South Wales, and on 27 March assumed the governorship of New Zealand, to which he had been previously gazetted. Here he found Sir George Grey's government in power, and a period of commercial depression weighing on the colony [see **GREY**, Sir **GEORGE**, Suppl.]; some small troubles with the natives were also pending. Gisborne describes Robinson's régime in this colony as that of a man prudent in counsel and energetic in action, who was still busy gathering materials for his own judgment when his administration was cut short by his transfer, in August 1880, to be governor of the Cape Colony and high commissioner of South Africa. The dual office demands peculiar ability; for the holder has his mini-

sters to consider in the colony itself, while his position of high commissioner throws upon him the personal responsibility for action outside the Cape Colony.

Robinson went to the Cape at one of the most critical periods of its history. On 16 Dec. 1880 the malcontent Boers in the Transvaal had declared their independence. He arrived in Cape Town on 22 Jan. 1881. In February he was called upon to negotiate terms of peace in circumstances which were a source of deep indignation throughout the greater part of the British Empire. When peace was concluded he had to face an extremely difficult situation. British and Boers were entirely out of sympathy. The antagonism was not only between the British colonies and the free republics, but between British and Dutch throughout South Africa wherever they came into contact. The native races also were restless and discontented. So far as his personal influence could affect such a situation, he handled the problem with rare tact and sagacity. He warded off in great measure the bitter hostility which the British in Africa at that time nourished towards the home government; he showed an active sense of the necessity of maintaining British influence; and throughout he fostered the idea that a cordial union between British and Dutch was the real foundation of peace and progress in South Africa.

It was not very long after the convention of 1881 that further difficulties with the Boers became inevitable owing to their action in the native territories immediately beyond their borders. In October 1881 the Bechuanas chief Montsioa felt apprehensive and begged British protection, which was not conceded. Native disputes gave excuse for Boer interference. The Transvaal government professed to be unable to restrain its subjects from overrunning the Bechuana country. By the end of 1882 Robinson was satisfied that things could not drift on indefinitely (MACKENZIE, *Austral Africa*, i. 157). But general negotiations with the South African Republic caused delay, and the Transvaal deputation to England in November 1883 brought Robinson also to this country to assist in settling the revised convention of 1884. On returning to the Cape in March 1884 he made great efforts to arrive at an understanding with the government of the South African Republic as to their responsibility for checking Boer raiders, and in November obtained the despatch of Sir Charles Warren's expedition, with a view to a definite settlement. The result was the annexation of Bechuanaland to the British

dominions on 30 Sept. 1885. This settlement was to some extent marred by a dispute with Sir Charles Warren, as special commissioner, respecting the general control of the high commissioner. Sir Charles Warren, on his return home, urged the separation of the functions of high commissioner from those of governor of the Cape; suggestions were made as to the divergence of interest between the colony and the home government, and a controversy began which lasted for three years. The matter was strenuously taken up by Mr. John Mackenzie, who had been a commissioner in Bechuanaland. But there were strong arguments on the other side. Robinson was supported by the Cape parliament, and eventually the existing arrangement was maintained (*Parl. Paper C. 5488* of 1888; WILLIAMS, *British Lion in Bechuanaland*, sect. ix. p. 47).

In October 1886 Robinson was commissioned by the imperial government to proceed to Mauritius to investigate the charges which had been brought against Sir John Pope-Hennessy [q. v.], the governor of that colony; he decided against the governor, whom he suspended from the exercise of his functions. He left Mauritius on 18 Dec. and returned to Cape Town on 1 Jan. 1887.

Although the ordinary term of a governor's administration had now run out, the value of Robinson's work was such that his term of administration was extended. He was now called upon to take a fresh step towards consolidating the British power in South Africa. It became known during 1887 that the Boers were contemplating an extension to the north, and early in 1888, by the energy and insistence of Mr. Cecil Rhodes, a treaty was made with Lobengula which secured for Great Britain the key of the great area to the northward. Robinson has been accused of being lukewarm in this matter; he certainly moved more slowly than Mr. Rhodes, but he cannot be denied credit for his share in the policy. This treaty was followed on 30 Oct. 1888 by the Rudd concession; but before the Chartered Company had its birth Robinson had ceased to be high commissioner. On 1 May 1889 he left the Cape, having been largely instrumental in establishing peace, in promoting good feeling, in improving internal communication, in opening up new territories to British enterprise, in securing to the Cape Colony a surer trade and improving revenue, and in fostering a sense of common interest with the Dutch republics, as shown by the customs union with the Orange Free State, which was consummated in 1889. His farewell speech created some stir in official circles because

he declared that there was 'no permanent place in South Africa for direct imperial rule,' but probably too much importance was at the time attached to the dictum.

On his return to England Robinson looked upon his work for the empire as practically at an end, and settled down in London, devoting himself to the duties of various companies which claimed his services as a director. He was in particular a director of the London and Westminster Bank. In 1891 he was created a baronet. For six years he enjoyed this comparative rest, and then in the spring of 1895 came a call which he did not feel himself justified in refusing. He was asked by Lord Rosebery's government to return to South Africa in his old position. The time was an anxious one. The Transvaal Boers had recently had considerable diplomatic successes in their dealings with the British government; and they were inclined to be very high-handed. At the same time there was a deep feeling of resentment among the British who had made their home in Johannesburg, and were there subjected to vexatious and oppressive restrictions.

Robinson had no wish to return to South Africa, but the summons was a great compliment, and the call of duty was one which he felt bound to obey. At considerable personal sacrifice he took up the appointment on 30 May 1895. The choice of the government was fiercely assailed in the House of Commons (*Hansard*, 1895, xxxii. 420), among others by Mr. Chamberlain, who within a few weeks, by the turn of fortune's wheel, became himself the colonial secretary to whom Robinson was responsible.

Negotiations for substantial concessions from the executive of the South African republic were still in progress when, on 29 Dec. 1895, Dr. Jameson made his raid on the frontier of the republic, and Robinson was face to face with one of the worst situations that the history of the empire has seen. It is almost superfluous to say that Robinson had no sort of part in this ill-advised attempt. He had been kept in ignorance of the project because those who conceived it knew his character. Directly he heard of the attempt he endeavoured to stop it by telegraph, but was too late.

On 2 Jan. 1896 Robinson proceeded to Pretoria to negotiate for the release of the raiders. In this he succeeded, returning to Cape Town on 14 Jan.; but he could not expect to do much more. The troubles which were at the root of the raid were left to breed the war of 1899; but for this Robinson cannot fairly be held responsible. His personal influence at

any rate glossed over the apparent friction between Dutch and British, and when in May 1896 he came on leave to England, he left comparative calm and good feeling behind him. Probably he was the only man who had sufficient prestige to cope with such a crisis and save a war. On 11 Aug. 1896 he was made a baron in the peerage of England, by the style of Baron Rosmead of Rosmead in Ireland, and of Tafelberg in South Africa. Immediately afterwards he returned to the Cape, where he proceeded with the work of conciliating all parties among the Dutch and British. But the failure of his health compelled him to ask to be relieved of his government. On 21 April 1897 he left the Cape for England. He never really recovered his health, and died at 42 Prince's Gardens, London, on 23 Oct. 1897. He was buried at Brompton cemetery on 1 Nov.

Robinson may be regarded as one of the greatest of the colonial governors whom Britain has sent out during the nineteenth century; and his name will always be particularly connected with the most vigorous period of the growth of South African empire. He was prudent, cautious, and businesslike; genial, kindly, and free from pomposity; above the middle height, of a dignified presence. An excellent appreciation of him is that of Sir Henry Parkes, the Australian statesman (*Fifty Years*, &c., i. 296). He was knighted in 1859, became K.C.M.G. in 1869, G.C.M.G. in 1875, and a privy councillor in 1882.

Lord Rosmead, besides being a good man of business and a good speaker, was a sportsman, and a great lover of horses and of horseracing (*Lang, History of New South Wales*, i. 422). The best portrait (by Folsingh) of Lord Rosmead hangs in the hall of Government House, Sydney. Others passed to the possession of his son, Lord Rosmead, at Ascot, and of his daughter, the Hon. Mrs. Durant, who also possesses a bust by Simonotti.

Robinson married, on 24 April 1846, Nea Arthur Ada Rose D'Amour, sixth daughter of Arthur Annesley Rath, viscount Valentia, and left a son, Hercules Arthur Temple, who succeeded him, and three daughters, all married.

ROBINSON, SIR WILLIAM CLEAVER FRANCIS (1834-1897), colonial governor, born on 14 Jan. 1834, was the fifth son of Admiral Hercules Robinson [q. v.] He entered the colonial service in 1855 as private secretary to his elder brother (Sir) Hercules George Robert Robinson, afterwards first Baron Roemond [q. v. Suppl.], who was then lieutenant-governor of St. Kitts. In 1859, when his brother became governor of Hongkong, he accompanied him thither in the same capacity. He was president of Montserrat in 1862, and from January to October 1865 he administered the government of Dominica. From 23 May 1866 to 1870 he was governor of the Falkland Islands, and from 5 July 1870 to November 1873 governor of Prince Edward Island. During his administration the question of political union with the Dominion of Canada was debated, and his patience and judicious counsels assisted to bring about the union in July 1873. On 14 Nov. 1874 he was appointed governor of Western Australia. He assumed the administration on 11 Jan. 1875, relinquishing it on 6 Sept. 1877, after his appointment as governor of the Straite Settlements. In 1878 he proceeded to Bangkok on a special visit to invest the king of Siam with the G.C.M.G., on which occasion he was invested with the grand cross of the order of the Crown of Siam, which he received permission to wear. On 10 April 1880 he again assumed the office of governor of Western Australia. During his second governorship of the colony he was successful in wiping out a debt of 80,000*l.*, and leaving a balance of 32,000*l.* in the treasury. He remained until 17 Feb. 1883, when he became governor of South Australia. In 1889 he left Adelaide to assume the acting governorship of Victoria, during the absence on leave of Sir Henry Brougham Loch (afterwards Baron Loch) [q. v. Suppl.] His administration extended from 9 March to 18 Oct. 1889, and was marked with great success. After a second brief tenure of office from 16 to 28 Nov., he proceeded to England. His administration was so acceptable in Victoria that, at the conclusion of Sir Henry Loch's governorship, the premier and the leader of opposition were about to send a joint request

to the colonial office that Robinson might be nominated his successor when they learnt that Lord Hopetoun had been appointed. He was nominated for the third time governor of Western Australia, that he might by his administrative experience and previous knowledge of the colony facilitate the inauguration of responsible government in the last Australian crown colony. While in London he rendered considerable assistance both to the colonial office and to the Western Australia delegation in aiding the passage of the constitution bill through parliament. He left England for Perth in September 1890. He retired from active service in 1895.

Robinson was created C.M.G. in 1873, K.C.M.G. in 1877, and G.C.M.G. on 24 May 1887. He was a musical composer of some note, and wrote among other compositions a number of well-known songs, including 'I love thee so,' 'Imperfectus,' and 'Thou art my Soul.' Among his part songs were 'Autumn Woods' (1885), 'For Thee' (1885), 'From o'er the Sea' (1886), and 'The Rose in October' (1888). He died at his residence, 5 Cromwell Houses, South Kensington, on 2 May 1897. On 7 April 1862 he married Olivia Edith Dean, daughter of Thomas Stewart Townsend, bishop of Meath. By her he had three sons and two daughters.

RODWELL, JOHN MEADOWS (1808-1900), orientalist, eldest son of John Meadows Rodwell and Marianna Kedington, was born at Barham Hall, Suffolk, on 11 April 1808. Educated at Bury St. Edmunds under Dr. Malkin, he was admitted on 10 Nov. 1825 to Gonville and Caius College, Cambridge, where he held a scholarship (1827-30), and was likewise stroke of the first college boat; as an undergraduate he was also a contemporary and friend of Darwin, and used to accompany him on botanising expeditions. He graduated B.A. 1830, M.A. 1833, and was ordained deacon at Norwich on 5 June 1831, and priest at London on 17 June 1832. After curacies at Barham, where his uncle, William Kirby (1759-1850) [q. v.], was vicar, and at Woodford, Essex, he became rector of St. Peter's, Saffron Hill, London (1836-43), and lecturer at St. Andrew's, Holborn. In 1843 Bishop Blomfield gave him the valuable rectory of St. Ethelburga's, Bishopsgate, which he held till his death; but after some thirty-five

years of active work he retired, with the bishop's sanction, under a medical certificate, from residential duty. Some of the curates-in-charge after this time introduced a ceremonial ritual into the church which evoked the opposition of protestant agitators.

Rodwell appears to have commenced oriental studies when quite a young man, by reading Hebrew with his uncle, the Rev. R. Kedington. In acquiring the elements of Arabic he was assisted by Catalago.

His greatest literary achievement was his English version of the Koran, which appeared in 1861 (2nd edit. 1876), and is considered by many scholars as the best existing translation, combining accuracy with a faithful representation of the literary garb of the original. His other works are translations of 'Job' (1864; 2nd edit. 1868) and 'Isaiah' (1891; 2nd edit. 1896). He also issued translations of collected liturgies from Ethiopic manuscripts (1864), and from the Coptic (1866), and briefly catalogued Lord Crawford's Coptic and Ethiopic manuscripts at Inaigh Hall. The value of his work was recognised by his election to an honorary fellowship of his college on 7 Oct. 1886. Rodwell's extraordinary retentiveness of mental vigour may be estimated from the fact that he commenced the study of several fresh languages when past eighty years of age, and even in his 91st year (June 1898) printed a short pamphlet or open letter on the derivation and doctrinal significance of the word 'mass,' and somewhat later corresponded with the present writer as to books for the acquirement of Sanskrit.

He died at his house at St. Leonards-on-Sea on 6 June 1900, and is buried in Ore cemetery, Hastings.

Rodwell was twice married: (1) in 1834 to Elizabeth, daughter of the Rev. William Parker, Rodwell's predecessor at St. Ethelburga's, and (2) about 1860, to Louisa Röhrs. Of several children by his first wife, the Rev. W. M. Rodwell and another son survived him.

ROSMEAD, BARON. [See ROBINSON, SIR HENRIQUEL GUERIN ROBERT, 1824-1897.]

ROTHSCHILD, FERDINAND JAMES DE (1830-1898), known as Baron Ferdinand Rothschild, virtuoso, born at Paris in 1830, was second son of Baron Anselm de Rothschild of Frankfurt and Vienna, by his first cousin Charlotte, eldest daughter of Nathan Meyer Rothschild [q. v.] Both father and

mother were grandchildren of Meyer Amichel Rothschild, the founder of the great financial house. He was educated in Vienna, but settling in England in 1860, became a British subject and completely identified himself with the country. Buying an estate of about eight hundred acres at Waddesdon in Buckinghamshire, he erected thereon the mansion of Waddesdon Manor, after the style of the Château de Chambord. In 1885 he entered parliament for the Aylesbury division and retained the seat as long as he lived. But he devoted himself more particularly to social life and to his duties as a country gentleman, building up a model estate, breeding stock, and entertaining numerous distinguished guests—among the latter Queen Victoria (14 May 1890), the Shah of Persia, the German Emperor Frederick, and on several occasions King Edward VII when prince of Wales. He was extremely interested in painting, especially that of the Low Countries and the work of Gainsborough and Reynolds, and he formed a fine collection at Waddesdon. In a family of collectors he was pre-eminent for his ability. The attention which he paid to the art of the Renaissance, especially bindings, enamels, furniture, and goldsmith's work, was repaid by a splendid collection of rare objects of the highest quality. His collection of French books, many in superb bindings, was catalogued partially in 1897 (London, 4to, private issue, with sixteen plates). His own favourite reading was among the French memoir writers, and he published some of his gleanings in a volume entitled 'Personal Characteristics from French History' (London, 1896, seventeen portraits, no index). Of more interest is 'Three Weeks in South Africa' (printed for private circulation, 1895), a brightly written diary of a trip on board the Dunottar Castle, December 1894-February 1895. In July 1897 he achieved a considerable triumph as a collector by the successful purchase of a Terburg, a Gerard Douw, and Cuyp's 'View on the Maas,' from the Six Museum at Amsterdam—a collection hitherto intact (*Times*, 26 July 1897). He was elected a trustee of the British Museum on 7 Feb. 1896, and until his death he took a keen interest in the work of the institution. He died suddenly of syncope at Waddesdon on 18 Dec. 1898, and by his will left a superb collection of jewels, plate, and other works of art to the British Museum, on the condition that they should be kept in a room apart from the other collections, to be known as the 'Waddesdon Bequest Room.' This room was opened to the public on 9 April 1900 (*Catalogue of*

Waddesdon Bequest). He also bequeathed to the museum library fifteen manuscripts, mostly of the fifteenth and sixteenth centuries, richly illuminated and on vellum (*Addit. MSS.* 35310-24). By far the finest of these is a Latin breviary (*Addit. MS.* 35311), a beautiful example of early fifteenth-century French work.

On 7 June 1865 Rothschild married his cousin Evelina, daughter of Baron Lionel Nathan Rothschild [q.v.]. Upon her death, without issue, on 4 Dec. 1866, he erected and endowed as a memorial to her the Evelina Hospital for Children in the Southwark Bridge Road.

RUNDLE, ELIZABETH (1828-1896), author. [See **CHARLES, MRS. ELIZABETH.**]

RUSKIN, JOHN (1819-1900), author, artist, and social reformer, was the only child of John James Ruskin (b. 1786), who was the son of a calico merchant in Edinburgh, and Margaret Cox (b. 1781), his wife, the daughter of a skipper in the herring fishery. They were first cousins, and married in 1818. They lived at 64 Hunter Street, Brunswick Square, London, in which house (marked with a tablet by the Society of Arts, 1900) John Ruskin was born on 8 Feb. 1819. The character of his parents and tenor of his home life were the chief formative forces in Ruskin's education. As a boy he was educated by his mother, and when he went into residence at Oxford she went also, taking lodgings in the High Street, where her husband always joined her from Saturday to Monday. Except during a portion of his short married life, Ruskin lived constantly with his parents; he rarely travelled abroad except in their company, and whenever they were separated daily letters were exchanged. His father died in 1864; his mother in 1871. They are buried in the churchyard of Shirley, Kent. The inscriptions on the monument (designed by Ruskin) state that John James Ruskin 'was an entirely honest merchant, and his memory is, to all who keep it, dear and helpful. His son, whom he loved to the uttermost and taught to speak truth, says this of him.' 'Beside my father's body I have laid my mother's. Nor was dearer earth ever returned to earth, nor purer life recorded in heaven.' A further monument to his mother was the restoration of a

spring of water between Croydon and Epsom, and the endowment of a well. A tablet here erected bears the inscription 'In obedience to the Giver of Life, of the brooks and fruits that feed it, of the peace that sends it, may this well be kept sacred for the services of men, flocks, and flowers, and be by kindness called Margaret's Well.'

'I have seen my mother travel,' says Ruskin, 'from sunrise to sunset on a summer's day without once leaning back in the carriage.' She maintained this unbending attitude in the education of her son. An evangelical puritan of the strictest sect, she held strong notions on the sinfulness even of toys, and in after years it is said that the pictures in her husband's house were turned with their faces to the wall on Sunday. With no playfellows, and no toys beyond a single box of bricks, the child's faculties were concentrated from his earliest years on the observation of nature and inanimate things. He used to spend hours, he says, in contemplating the colours of the nursery carpet. When he was four the Ruskins removed from Bloomsbury to Herne Hill (No. 28). The garden now took the place of the carpet. After morning lessons he was his own master. His mother would often be gardening beside him, but he had his own little affairs to see to, 'the ants' nest to watch or a sociable bird or two to make friends with.' The gifts of expression which were to enable him to show to others the loveliness he discerned owed their first cultivation to his mother's daily readings in the Bible—'the one essential part,' he says, 'of all my education.' They read alternate verses, she 'watching every intonation, allowing not so much as a syllable to be missed or misplaced.' She began with the first chapter of Genesis and went straight through to the last verse of the Apocalypse, and began again at Genesis the next day. Ruskin had also to learn the whols of 'the fine old Scottish paraphrases.' To this daily discipline, continued until he went up to Oxford, he attributed the cultivation of his ear and his sense of style.

By his father the boy was initiated in secular literatures (especially Scott's novels and Pope's 'Homer') and in art. John James Ruskin had settled in London in 1807, and two years later entered into partnership as a wine-merchant under the title of Ruskin, Telford, & Domecq—'Domecq contributing the sherry, Telford the capital, and Ruskin the brains.' He combined with much shrewdness in business a genuine love of literature and a strong vein of romantic

sentiment. His taste was as exact in art as in sherries, and he 'never allowed me to look for an instant' (says his son) 'at a bad picture.' He had been a pupil in the landscape class of Alexander Nasmyth [q. v.] at Edinburgh, was fond of sketching, and delighted in reading poetry aloud, in buying drawings of architecture and landscape, and in entertaining artists at dinner. In later years Turner, George Richmond, and Samuel Prout formed the constant dinner-party invited by the father to celebrate his son's birthday. The atmosphere in which young Ruskin lived and moved was thus at once puritanical and artistic.

An important part of his education was a summer tour with his parents. His father was in the habit of travelling once a year for orders, and on these journeys he combined pleasure with business. He travelled to sell his wines, but also to see pictures; and in any country seat where there was a Reynolds, or a Velasquez, or a Vandyck, or a Rembrandt, 'he would pay the surliest housekeeper into patience until we had examined it to our hearts' content.' Also he travelled leisurely—in a private carriage hired or lent for the expedition—and he made a point of including in each summer's journey a visit to some region of romantic scenery, such as Scotland (in 1824, 1826, 1827); the English lakes (1824, 1826, 1830); and Wales (1831). From the earliest days the young Ruskin had accompanied his parents on their journeys, perched on the top of a box in the 'dickey' of a post-chaise. By the time he was ten he had thus seen all the high roads and most of the cross-roads of England and Wales, and the greater part of lowland Scotland. Half a century later Ruskin occasionally revived, for the pleasure of himself and his friends—and the amusement of the districts through which they passed—the practice of posting tours, and had a posting carriage of the old fashion built for him. 'In all mountain ground and scenery,' he says, 'I had a pleasure as early as I can remember, and continuing till I was eighteen or twenty, infinitely greater than any which has been since possible to me in anything; comparable for intensity only to the joy of a lover in being near a noble and kind mistress, but no more explicable or definable than that feeling of love itself.' He was encouraged by his parents to write diaries and versify his impressions. At home a little table was always kept apart for his work, and there the child would sit drawing or writing while his mother knitted and his father read aloud. His parents paid him a

shilling a page for his literary labours, and bound up his juvenilia, which are still preserved at Brantwood. He spent his pocket-money in minerals, which were his earliest and constant hobby. At the age of four he had begun to read and write; at seven he was hard at work in printing volumes of stories; at eight he began to write verses. His father burst into tears of joy when the son's first article appeared in print. His mother had designed him for the church, hoping he would become 'a glorified Dean Milman'; and both his parents were 'exquisitely miserable at the first praises of a clear-dawning Tennyson.' His early poems, which were to him the Latin exercises of other schoolboys, deal with 'dropping waters,' 'airy fortresses,' 'taper-pointed loaves,' and 'glittering diamonds from the skies.' Some verses written at the age of fourteen have a note of genuine feeling:

There is a thrill of strange delight
That passes quivering o'er me,
When blue hills rise upon the eight
Like summer clouds before me.

In this year (1833) the summer tour took a wider scope. His father had brought home among his treasures from the city a copy of Prout's 'Sketches in Flanders and Germany.' 'As my mother watched my father's pleasure and mine,' says Ruskin, 'in looking at the wonderful places, she said, "Why should we not go and see them in reality?" My father hesitated a little, then with glittering eyes said, "Why not?"' And so they went to the Rhine and Switzerland, and two years later to Switzerland and Italy. These were the first of a series of posting tours through all the more romantic regions of Europe—Spain, Greece, and Norway excepted—which father, mother, and son took together for nearly thirty years. They travelled always in their own carriage with a conrior. They went by easy stages, stopping at their son's will to examine minerals here, to study pictures there, and to sketch and wander everywhere. These were 'the olden days of travelling, now to return no more,' as Ruskin lamented in the 'Stones of Venice,' 'in which distance could not be vanquished without toil, but in which that toil was rewarded partly by the power of deliberate survey of the countries through which the journey lay, and partly by the happiness of the evening hours when, from the top of the last hill he had surmounted, the traveller beheld the quiet village where he was to rest, scattered among the meadows beside its valley stream, or, from the long-hoped-for turn in the dusty perspective of

the causeway, saw for the first time the towers of some famed city, faint in the rays of sunset.' These 'hours of peaceful and thoughtful pleasure' were important elements in Ruskin's education. The first sight of the snowy Alps (in 1833) opened, he says, a new life to him, 'to cease no more except at the gates of the hills whence one returns not. It is not possible to imagine, in any time of the world, a more blessed entrance into life, for a child of such temperament as mine. . . . For me the Alps and their people were alike beautiful in their snow and their humanity; and I wanted neither for them nor myself eight of any thrones in heaven but the rocks, or of any spirits in heaven but the clouds. I went down that evening from the garden terrace of Schaffhausen with my destiny fixed in all of it that was to be sacred and useful.' With the study of nature—associated through romantic literature with memories of human valour and passion—that of art went hand in hand. His inspection of the chief pictorial treasures of Great Britain was now disciplined by close study in the great galleries of Europe. Those of Vienna, Madrid, and St. Petersburg must be excepted; nor did Ruskin ever visit Holland—a neglect which may perhaps partly explain his lack of sympathy with the Dutch schools. For his early study of them he was largely dependent on the Dulwich Gallery, which was close to his home and from which he drew so many references in 'Modern Painters.'

The more formal part of Ruskin's education was less fortunate. He once suggested for his epitaph the curse of Reuben: 'Unstable as water, thou shalt not excel,' and said, 'It is strange that I hardly ever get anything stated without some grave mistake, however true in my main discoveries.' There was nothing in his early education to drill him into exact scholarship or encourage concentration. Up to the age of ten his mother taught him. A classical tutor was then called in. He was Dr. Andrews, father of Coventry Patmore's first wife. After her marriage Ruskin became a friend of the poet, and wrote enthusiastically in praise of 'The Angel in the House.' Andrews was impressed by the boy's precocity, and wanted to take him on to Hebrew before he was well grounded in Greek. Another tutor, Mr. Rowbotham, taught him French and mathematics. Ruskin had a fair conversational knowledge of French, and was always a reader of French literature. Of mathematics he was fond, and this was the branch of his early studies which gave him least trouble. Next Ruskin went for part

of two years to a day school at Camberwell, kept by the Rev. Thomas Dale (1767–1870) [q. v.] His school course was interrupted by an attack of pleurisy. He afterwards attended lectures three times a week at King's College. His first drawing master (1831) was Mr. Runciman; later, he had lessons from Copley Fielding and J. D. Harding. But the decisive influence in this sort was the acquisition in 1832, as a birthday present from Mr. Telford, of a copy of Rogers's 'Italy' with Turner's vignettes. He set to work at once to copy them, and from that day forth Turner obtained his whole allegiance.

In October 1836 Ruskin matriculated at Oxford, and in the following term went into residence as a 'gentleman-commoner' at Christ Church. At Oxford as elsewhere his studies were diffusive. He kept up his drawing and took great delight in scientific work with Buckland (then a canon of Christ Church). His Latin, he says, was the worst in the university, and to the end of his career he 'never could get into his head where the Pelasgi lived or the Heracles returned from.' A private tutor, Osborne Gordon, was employed to patch up such holes, and in recognition of Gordon's services Ruskin's father gave 5,000*l.* for the augmentation of Christ Church livings. In 'pure scholarship' Ruskin never attained any proficiency. His love of Greek literature lasted throughout his life. To Plato especially he was strongly attached, for 'the sense of the presence of the Deity in all things, great or small, which always runs in a solemn undercurrent beneath his exquisite playfulness and irony' (*Stones of Venice*, ii. ch. 8. The influence of Plato upon Ruskin has been traced in a pamphlet by William Smart, 1883). In the Oxford of Ruskin's day little heed was paid to Greek art or archaeology, and he 'never loved the arts of Greece as others have' (*Lectures on Art*, § 111), though in after years he devoted some attention to the subject. His 'Aratra Pentelici' (1872) gives his views on Greek sculpture. It abounds in clever *aperçus*, but his thesis that Greek artists did not aim at ideal beauty cannot be accepted. His analysis of the myths of Athena as the life-giving and spirit-inspiring 'Queen of the Air' (1869) often shows real insight, but is fanciful. The first section of the book is headed 'Athena Chalinitis,' but Ruskin 'never laid to heart the significance of the Greek quality of restraint which this epithet ascribes to the goddess' (Norton). Among his Oxford friends and contemporaries was (Sir) Charles Newton [q. v.

Suppl.], who in 1852 endeavoured to persuade Ruskin to accompany him to Athens and Mitylene. The trip was vetoed by his parents, and 'Greek and Goth' went their several ways (*Præf.* ii. ch. viii.) At a later time Ruskin became interested in excavations, gave General di Cesnola 1,000*l.* for diggings in Cyprus, and presented most of the finds to the British Museum. Of his contemporaries at Christ Church Ruskin has drawn some brilliant sketches in 'Precognita.' He formed a close and lifelong friendship with (Sir) Henry Acland [q. v. Suppl.], to whom he was drawn both by common artistic tastes and by Acland's type of radiant manhood; another friendship, which developed more slowly, was with Henry George Liddell [q. v. Suppl.]. Though no athlete, Ruskin was accepted into 'the best set.' Pusey never spoke to him, and by 'the Oxford movement' he was untouched. He spoke sometimes at the Union. One motion supported by him was characteristic: 'that intellectual education as distinguished from moral discipline is detrimental to the interests of the lower order of a nation.' In the 'Life and Letters of F. W. Robertson' there is a reference to 'a very ingenious and somewhat sarcastic speech' by Ruskin in defence of the stage which greatly pleased the house.

Ruskin devoted much of his time at Oxford to writing verse. He competed for the Newdigate prize in 1837, with a poem on 'The Gipsies' (won by A. P. Stanley), and in 1838 on 'The Exile of St. Helena' (won by J. H. Dart). Ruskin's unsuccessful essays are included in his 'Poems' (1891). In 1830 he won the prize with a poem on 'Salotto and Elephantia' (recited in the theatre at Oxford on 12 June and published in that year; new ed. 1878). The composition has some good lines, as, e.g.:

Though distant shone with many an azure gem
The glacial glory of his diadem;

but on the whole it must be pronounced neither better nor worse than most poems of its class. Verses by him had already appeared in 'Friendship's Offering,' and he contributed for some years to that and other miscellanies of the period. Some of his album verses were pretty and have found their way into collections. He continued as an occasional amuseur throughout his life to write songs and rhyming loitors, but by the time he was twenty-six he abandoned 'versification as a serious pursuit, having come to the extremely wholesome conclusion that in poetry he could express nothing rightly that he had to say.'

Ruskin's Oxford course was interrupted by ill-health, which may have been accentuated by a disappointment of the heart. He had fallen in love with one of the daughters of his father's French partner (the Adèle of his poems). As a suitor he combined, he tells us, 'the single-mindedness of Mr. Traddles with the conversational abilities of Mr. Toots,' and his Parisian flame laughed whole-heartedly at the literary offerings with which he sought to commend himself to her. In 1840 she married a handsome young French nobleman. Shortly afterwards, at Easter in that year, when Ruskin was putting on a spurt for his examinations, he was seized with a consumptive cough and spat some blood. The drop was not, as in the case of Keats, his death-warrant, but it was a death-blow to hopes of academical distinction. He went down from Oxford and for nearly two years was dragged about in search of health, through Switzerland and Italy and to Leamington (where he derived great benefit from Dr. Jephson's treatment). Memorials of these travels are given in Ruskin's 'Letters to Dido' (1893). In a few years Ruskin outgrew his tendency to consumption. He was fond of walking and of climbing among the Alps; and in after years of rowing, as also of manual exercise. He retained far into old age evidences of unabated vigour in hair still thick and brown; and could often be seen rowing his boat (of his own design) across the lake in half a gale of wind. But he was never a very strong man, and he taxed to the uttermost by constant mental strain such strength as he possessed. In April 1842, having recovered his health, Ruskin went up to Oxford, and was given an honorary double-fourth. He graduated B.A. in 1842 and M.A. in 1843. He was deeply sensitive of 'the ineffable charm' of Oxford and loved the university dearly. But it was among the hills and clouds, the trees and the mosses, that he really graduated.

It was, however, as 'an Oxford graduate' that he first emerged into fame. He had already in his teens appeared in print. His first published words, 'Enquiries on the Causes of the Colour of the Rhine,' and 'Considerations on the Strata of Mont Blanc,' were printed, when he was fifteen, in London's 'Magazine of Natural History' (1834, vol. viii. pp. 438 and 644), to which he contributed some other geological studies two years later (*ib.* 1836, vol. ix. p. 533). An article by him also appeared in the first volume of the 'Transactions of the Meteorological Society' (1839). More important was a series of articles in London's 'Architectural

Magazine' (1837-8). After a tour in Switzerland and Italy in 1835 Ruskin had returned with his parents in 1837 to one of the haunts of his boyhood, the Lake country. The contrast between the cottages of Westmoreland and of Italy struck him as typical of that between the countries themselves, and during the autumn following he wrote on 'The Poetry of Architecture; or, the Architectures of the Nations of Europe considered in its Association with National Scenery and National Character.' These papers, written at the age of eighteen, lay down a line of study which Ruskin afterwards pursued in 'Seven Lamps' and 'Stones of Venice.' They show how securely he had now found his literary medium. They contain, as he said fifty years later, 'sentences nearly as well put together as any I have done since.' The *nom de plume*—Kata Phusin—adopted for these and some other contributions to the same magazine was expressive of the temper in which he was presently to discourse in 'Modern Painters.' 'Accuse me not of arrogance, If having walked with Nature,' &c., was the motto of the later work.

As early as in 1836 (when he was seventeen) Ruskin had produced the germ which grew into his principal book. To the Academy's exhibition of that year Turner had sent three pictures characteristic of his later manner—'Juliet and her Nurse,' 'Rome from Mount Aventine,' and 'Mercury and Argus.' They were fiercely attacked in 'Blackwood,' and young Ruskin, roused thereby 'to height of black anger, in which I have remained pretty nearly ever since,' wrote an answer. Ruskin's father sent the article to Turner. The old man thanked his youthful champion for his 'zeal, trouble, and kindness,' but sent the manuscript, not to 'Blackwood,' which he did not consider worth powder and shot, but to the purchaser of 'Juliet,' Mr. Munro of Novar. A copy of the article was found among Ruskin's papers after his death. The work laid aside when Ruskin went up to Oxford was resumed when he had taken his degree. In 1840 he had been introduced to Turner. In 1841 he had paid his first visit to Venice. In 1842 he was greatly impressed by Turner's Swiss sketches. To an incident in May of that year Ruskin attributes his 'call.' 'One day,' he says, 'on the road to Norwood I noticed a bit of ivy round a thorn stem, which seemed even to my critical judgment not ill "composed;" I proceeded to make a light-and-shade pencil study of it in my grey-paper pocket-book, carefully as if it had been a bit of sculpture, liking it more

and more as I drew. When it was done I saw that I had virtually lost all my time since I was twelve years old, because no one had ever told me to draw what was really there!' Later in the year he travelled in France and Switzerland, and on his return he set to work on the first volume of 'Modern Painters.' The title was suggested by the publishers (Messrs. Smith, Elder, & Co.) in lieu of 'Turner and the Ancients.' The scope of the book is indicated by the author's sub-title (afterwards suppressed): 'Their superiority in the Art of Landscape Painting to all the Ancient Masters proved by Examples of the True, the Beautiful, and the Intellectual, from the Works of Modern Artists, especially from those of J. M. W. Turner, Esq., R.A.' The volume was published in April 1843 anonymously by 'A Graduate of Oxford.' Ruskin's father feared that the treatise would lose in authority if its author's youth were disclosed: he was then twenty-four. The success of the book was immediate. A second edition was called for in the following year. In all seven editions of the first volume in separate form were published; that of 1851 was the first to bear the author's name. The volume, originating in a defence of Turner's later manner, had grown into a treatise on the principles of art, declaring that art means something more than pleasing arrangement of lines and colours; that it can, and therefore ought to, convey ideas as being a kind of language; that the best painter is he who conveys the most and highest ideas of truth, of beauty, and of imagination; and then, by way of example, that Turner's work was full of interesting truths, while the Dutch and French-Italian landscapists were very limited in their view of the varied facts of nature. The latter part of his theme led the author to make a close study of mountains, clouds, and sea, and to enrich his pages with passages of glorious description. The closeness of his reasoning, the wealth of illustrative references, the tone of authority, the audacious criticism of established reputations, and the beauty of the word-painting made a great and lasting impression. Wordsworth pronounced the author a brilliant writer and placed 'Modern Painters' in his lending library at Rydal Mount (KNIght, ii. 334). Tennyson saw it lying on Rogers's table, and longed very much to read it at his leisure (*Life*, i. 223). Ruskin had been taken to see Rogers some years before. He appeared occasionally at the poet's breakfasts, and corresponded with him from Venice. Sir Henry Taylor wrote to Mr. Aubrey de Vere begging him to read 'a

book which seems to me to be far more deeply founded in its criticism of art than any other that I have met with . . . written with great power and eloquence' (COLLINGWOOD, p. 94) 'For a critic to be so much of a poet,' wrote Mrs. Browning, 'is a great thing.' Sydney Smith said it was 'a work of transcendent talent, presented the most original views, and the most elegant and powerful language, and would work a complete revolution in the world of taste' (*Præf.* ii. ch. ix.) Dearer to Ruskin than the praises of the great world was the delight of his parents. On New Year's day his father bought for him Turner's picture of 'The Slaver,' well knowing how to please me. The pleasures of a new Turner to me nobody ever will understand.'

The young author was not lured by praise into hurried production; nor was the success of the first volume of 'Modern Painters' a decisive point in his career. He was still giving much of his best effort to drawing, with steadily increasing skill, and to the geological and mineralogical studies, in which to the end he keenly delighted. He set to work to continue his studies in art, but it was still an open question which was to be the main work of his life. In 1844 he went with his parents to Switzerland, and studied mountains at Chamouni and Zermatt. At the Simplon they met James David Forbes [q. v.], whose viscous theory of glaciers Ruskin afterwards defended with great warmth. On his way home he spent some time in Paris, studying old masters at the Louvre. Next year he went abroad without his parents, but attended by a valet and Couttet the guide. At Macugnaga, where he spent some weeks, he devoted himself to close study of Shakespeare, 'which led me into fruitful thought, out of the till then passive sensation of merely artistic or naturalist life.' Other writers to whom Ruskin professed himself mainly indebted were Dante, George Herbert, Wordsworth, and Carlyle. From Macugnaga he went to Pisa, Lucca, and Venice, and to this tour he attributes a turning point in his life and work. At Lucca he was profoundly impressed by the recumbent statue of Ilaria di Carretto (described in *Modern Painters*, vol. ii. sec. i. chap. vii., and in *The Three Colours of Præraphælitism*). Beside this tomb he 'partly felt, partly vowed, that his life must no longer be spent only in the study of rocks and clouds.' At Venice (whither J. D. Harding accompanied him) they went one day to see the then unknown and uncarved-for Tintorets in the Scuola di San Rocco. It was a revelation, and decided the current

of Ruskin's life. 'But for that porter's opening I should,' he said, 'have written the "Stones of Chamouni" instead of the "Stones of Venice," and I should have brought out into full distinctness and use what faculty I had of drawing the human face and form with true expression of their higher beauty. . . . I felt that a new world was opened to me, that I had seen that day the art of man in its full majesty for the first time; and that there was also a strange and precious gift in myself enabling me to recognise it.' With this conviction Ruskin returned home in the autumn of 1845 to Donmark Hill, whither his parents had removed in 1843 to a large house with spacious grounds, and proceeded to write out a second volume of 'Modern Painters.' The enlargement of its scope was at once obvious. Instead of a defence of the moderns, we heard now the praise of the ancients. Whereas the closing paragraphs of Ruskin's first volume are an exhortation to truth in landscape, those of the second are a hymn of praise to 'the angel-choirs of Angelico, with the flames on their white foreheads waving brighter as they move, and the sparkles streaming from their purple wings like the glitter of many suns upon a sounding sea.' The second volume, published in April 1846, confirmed and established Ruskin's fame, for though published anonymously the authorship was by this time an open secret. This treatise, though marred by a narrowness of temper and by some other faults, mercilessly exposed by the author himself in his notes to a revised edition in 1882, occupies a central place in Ruskin's system. It sets forth the spiritual as opposed to the sensual theory of art. It expresses what he elsewhere calls 'the first and foundational law respecting human contemplation of the natural phenomena under whose influence we exist, that they can only be seen with their properly belonging joy, and interpreted up to the measure of proper human intelligence, when they are accepted as the work and the gift of a Living Spirit greater than our own.' The author's acute analysis of the functions of imagination in art, and his descriptions, often not accurate in detail, but always original and suggestive, of pictures by the Florentine masters and Tintoret, added to the attraction of the volume. In style it bears evident traces of an imitation of Hooker, whom Ruskin had been urged by Osborne Gordon to study.

The completion of 'Modern Painters' was interrupted for ten years by various studies and by domestic circumstances. In

1847 Ruskin was invited by Lockhart to review Lord Lindsay's 'History of Christian Art' for the 'Quarterly' (June 1847). He did so, he says, for the sake of Lockhart's daughter, for whose hand he was a suitor, but he was doomed to a second disappointment in love, followed like his first by a breakdown in his health. His parents presently urged him to propose to the daughter of old friends of theirs. Euphemia ('Effie') Chalmers Gray was the eldest daughter of Mr. George Gray, a lawyer, of Bowerswell, Perth. She used to visit the Ruskins at Herne Hill: and it was for her, in answer to a challenge, that he wrote in 1841, at a couple of sittings, one of the most popular of his minor books, 'The King of the Golden River.' She had grown up into a great beauty, and her family, no less than Ruskin's parents, were anxious for the match. On 10 April 1848 they were married at Perth. He was about ten years her senior, and much more so in habits of life and thought. The honeymoon was cut short by the bridegroom's ill-health. After a continental tour later in the year, they settled in London at 81 Park Street. Ruskin was by this time one of the literary celebrities of the day, and had many friends and acquaintances in the literary and artistic world. Among these were G. F. Watts, R.A., the Brownings, Miss Jean Ingelow, Carlyle, Froude, and Miss Mitford, whose closing years he brightened with many delicate and generous kindnesses. Ruskin's wife was presented at court, and occasionally he took her to evening crushes. But he could not live long, he said, with a dead brick wall opposite his window, and London life interfered with the literary works in which he was absorbed. Here, therefore, with his wife to a house on Herne Hill, and afterwards to his parents at Denmark Hill. The winters of 1849-50 and of 1851-2 the Ruskins spent at Venice—he hard at work on measuring and sketching and reading, and only occasionally finding inclination for social distractions. 'I broke through my vows of retirement the other day,' he wrote to Mr. Fawkes of Farnley (*Nineteenth Century*, April 1900) 'to take Effie to one of Marshal Radetzky's balls at Verona. The Austrians have made such a pet of her that she declares if she ever leaves Venice it must be to go to Vienna.' In the summer of 1851 Ruskin had made the acquaintance of Millais. 'I have dined and taken breakfast with Ruskin,' writes the painter (2 July), 'and we are such good friends that he wishes me to accompany him to Switzerland this summer.' Millais's great picture of 1858

was the 'Order of Release' (now in the Tate Gallery); the figure of the woman was painted from Mrs. Ruskin. In that summer the Ruskins had taken a cottage at Glenfinlas. Millais and his brother William accompanied them, and stayed for some weeks at the neighbouring inn. Sir Henry Acland was also for a time of the party. The events of this tour are described in the 'Life of Millais' (vol. i. chap. v.), where several sketches of Mrs. Ruskin by the artist are given. 'We have immense enjoyment,' he wrote to a friend, 'painting out on the rocks, and having our dinner brought to us there, and in the evening climbing up the steep mountains for exercise, Mrs. Ruskin accompanying us.' Millais's portrait of Ruskin (No. 3 below) was done at this time. Ruskin was writing the 'Lectures on Architecture and Painting,' which he delivered at Edinburgh in November 1853 and published as a book in the following year. Millais drew the frontispiece, and Ruskin took occasion to allude in terms of high praise to the work of him and other pre-Raphaelites. Shortly afterwards a nullity suit was instituted by Mrs. Ruskin. The case was undefended by Ruskin; the marriage was annulled, and on 3 July 1855 Millais was married at Bowerswell to Euphemia Chalmers Gray.

The years of Ruskin's married life were a period of great literary activity. Soon after the second volume of 'Modern Painters' had appeared, Turner was seized by illness, and his works began to show a conclusive failure of power. Ruskin felt free to pursue the completion of his task without the pressure under which he had at first placed himself, and proceeded to collect at large and at leisure materials for an elaborate examination of the canons of art. This led him far afield into various lines of work. He spent the autumn of 1848, after a tour to Amiens and Normandy, in writing 'The Seven Lamps of Architecture.' This was an attempt to apply to architecture some of the principles he had sought to enforce in the case of painting. The Seven Lamps were sacrifice, truth, power, beauty, life, memory, and obedience; and the final test of the excellence of a work of architecture was to be the spirit of which it was an expression. The book is narrow in its religious outlook, and in later years its author denounced its 'wretched rant.' But it contains some of Ruskin's finest passages, and it had considerable influence in encouraging the Gothic revival of the time. The interest taken by Ruskin a few years later in the architecture of the Oxford

Museum is recorded in the book which he and Acland published on the subject in 1889. 'Seven Lamps' was, further, 'the first treatise in English to teach the real significance of architecture as the most trustworthy record of the life and faith of nations.' It was published on 10 May 1849, and has been the most widely circulated of Ruskin's larger works. It was the first of them to be illustrated.

Another by-work of this period was Ruskin's advocacy of the pre-Raphaelites. At the time when he took up their cause he had no personal acquaintance with them, and their work was independent of his influence, though Mr. Holman Hunt had read the first two volumes of 'Modern Painters,' and felt they were 'written expressly for him' (*Contemporary Review*, April 1880). In 1851 the academy pictures of Millais and Hunt were bitterly attacked in the 'Times.' Millais asked Coventry Patmore [q. v. Suppl.] to see if Ruskin would take up their cause. Patmore did so, and on 13 and 30 May letters from Ruskin appeared in the 'Times,' warmly defending the young artists. Ruskin also wrote to Millais offering to buy 'The Return of the Dove to the Ark.' To a new edition of 'Modern Painters' in this year he added a note of strong praise of pre-Raphaelitism. In August he issued a pamphlet entitled 'Pro-Raphaelitism,' in which he again defended Millais and Mr. Holman Hunt against the critics, and instituted a comparison between the former painter and Turner, finding in both alike the same sincerity of purpose. Ruskin's intervention on behalf of the pre-Raphaelites was a turning-point in their fortunes. It encouraged the painters themselves, confirmed patrons and picture-dealers, and caused many of the critics to reconsider their opinions. Ruskin's personal connection with Rossetti, the third of the pre-Raphaelite group, came somewhat later. In 1853 he had been in correspondence with McCracken (a Belfast packing-agent, and one of Rossetti's first buyers), highly extolling the artist's work, and in April 1854 he made Rossetti's acquaintance. He admired Rossetti greatly, and helped him liberally, agreeing to buy, if he happened to like it, whatever Rossetti produced. 'I cannot imagine any arrangement more convenient to my brother,' says Mr. W. M. Rossetti, 'who was thereby made comfortable in his professional position.' A year later Ruskin made equally generous provision for Rossetti's fiancée, Miss Siddal; he settled 150*l.* a year upon her, taking her drawings up to that value. She was thus enabled to go abroad for her health. Some characteristic letters from Ruskin to 'Ida,'

as he called her, are published in Mr. W. M. Rossetti's 'Ruskin, Rossetti, and Pre-Raphaelitism' (1899). Ruskin was also an admirer of Rossetti's early poetry, and paid for the publication of his translations from 'Early Italian Poets.' He did not admire the painter's habits. 'If you wanted to oblige me,' he wrote, 'you would keep your room in order and go to bed at night. All your fine speeches go for nothing with me till you do that.' In later years their friendship cooled. The part of disciple was not one which Rossetti could play, even to a master so delicate in his patronage as Ruskin.

Ruskin followed up his letters and pamphlets on the pre-Raphaelites by a series of annual 'Notes on the Royal Academy' (1855-9). The notes were very popular with the public, but less so with the artists. Ruskin hoped that certain criticisms passed by him on a friend's picture would 'make no difference in their friendship.' 'Dear Ruskin,' replied the artist, 'next time I meet you, I shall knock you down; but I hope it will make no difference in our friendship.' 'D—— the fellow!' said another young artist who enjoyed the critic's acquaintance; 'why doesn't he back his friends?' The jealousies thus provoked among his artist friends caused Ruskin to discontinue the publication, resuming it only for one year, in 1875. 'Punch' put the complaint at the time into the mouth of an academician:

I paints and prints,
Hears no complaints,
And salls before I'm dry;
Till savage Ruskin
Sticks his tusk in,
And nobody will buy.

The lament was not unnatural, for at this period Ruskin held the position almost of an art-dictator, and his opinions were a powerful factor in the sale-rooms. He somewhere explains that he was compelled—perhaps as a just nemesis for his heterodox political economy—to buy in the dearest and sell in the cheapest market; for that whenever he sold a Turner the price was run down because a drawing which he did not care to keep could not be worth much, whilst the price of one which he wanted to buy was at once run up. Ruskin's counsel was sought after by amateurs, by Louisa Lady Waterford among the number (see *Story of Two Noble Lives*). In W. B. Scott's *Autobiographical Notes* are some references to Ruskin's work at Wallington House, Northumberland, for Sir Walter and Lady Trevelyan, close friends of both men). Ruskin's position as an expert was

recognised by various commissions and committees on artistic subjects. On the subject of the National Gallery Ruskin wrote at this time several letters and pamphlets. Turner, who had a warm regard for both the Ruskins, had appointed the son one of his executors. Foreseeing the litigation that ensued, Ruskin declined to act. But when at last the estate came out of chancery, Ruskin undertook the arrangement of the works which passed to the nation, and in this connection compiled several catalogues. The labour of sorting the nineteen thousand sketches was enormous. The arrangement of the Turner drawings which still obtains at the National Gallery is Ruskin's, but he protested, frequently and ineffectually, against the places allotted to them.

These were not the only by-works which interrupted the completion of 'Modern Painters.' Ruskin saw Venice crumbling away before his eyes and her pictures uncared for. He set himself, before it was too late, to trace the lines of her fading beauty, and 'to record, as far as I may, the warning which seems to me to be uttered by every one of the fast-gaining waves that beat, like passing bells, against the "Stones of Venice."'

With regard to this book, published 1851-3, Ruskin often complained that no one ever believed a word of his moral lessons deduced from the history of Venice as recorded in her monuments. But there has never been more than one opinion about the noble eloquence and haunting beauty of the descriptive passages, or about the permanent value of his work among the earlier masters of Venetian painting and sculpture and the earlier school of Venetian architecture. Ruskin's eminence as a writer on architectural subjects received some official recognition in 1874, when a proposal was made to confer the gold medal of the Royal Institute of British Architects upon him. He was travelling in Italy at the time, and was indignant at various restorations then in progress. He declined the honour, on the ground that architects were among the worst offenders (*Ruskin Union Journal*, March 1900). 'Stones of Venice,' which was fully illustrated by the author, and supplemented by a series of 'Examples of Venetian Architecture,' drawn on a larger scale, cost him an infinity of labour, of which he has left several records in his letters. 'I went through so much hard, dry, mechanical toil at Venice,' he writes to Norton, 'that I quite lost, before I left it, the charm of this place. Analysis is an abominable business. I am quite sure that people who work out subjects thoroughly are disagreeable wretches. One only feels as

one should when one doesn't know much about the matter.' The 'Stones of Venice' and volume ii. of 'Modern Painters' gave an impetus to many art movements of the day. Such were the Arundel Society, which, largely under the direction of his friend Mr. Edmund Oldfield, did much to preserve records of the wall paintings of Italy; and the Society for the Preservation of Ancient Buildings, which may be said to have taken as its motto Ruskin's words, 'Do not let us talk of restoration; the theory is a lie from beginning to end.' The enlargement of the National Gallery, by its now rich collection of early religious paintings, is also in no small measure owing to the persistence of Ruskin's advocacy and the influence of his works.

From another point of view the gist of 'Stones of Venice' was the chapter (vi. in vol. ii.) 'On the Nature of Gothic Architecture: and herein of the true functions of the workman in art.' This chapter, in which Ruskin takes as the touchstone of architectural style their compatibility with the happy life of the workman, struck an answering chord in William Morris [q. v. Suppl.] A reprint of the chapter was one of the earlier productions of the Kelmecott press (1892). 'In future days,' said Morris in a preface thereto, 'it will be considered as one of the very few necessary and inevitable utterances of the century. To some of us, when we first read it, it seemed to point out a new road on which the world should travel.' It was in this spirit that the chapter had been reprinted in 1864 at the instance of Dr. F. J. Furnivall (see his preface to 'Two Letters' from Ruskin to F. D. Maurice privately printed 1890) for distribution at the opening meeting of the Working Men's College in Great Ormond Street. 'Many of our men afterwards told me,' says Dr. Furnivall, 'how touched they had been by Ruskin's eloquent appreciation of their class.' Ruskin's acquaintance with Maurice had sprung from correspondence on a pamphlet on the reunion of Protestant Christians which Ruskin had put out in 1851 under the title 'Notes on the Construction of Sheepfolds'—a title which drew down upon the author an indignant remonstrance from a Scottish farmer who considered that his shilling had been obtained on false pretences. Ruskin, though not sympathising with Maurice's theology, warmly approved his social labours, and took charge from the commencement of the drawing classes at the college. He impressed D. G. Rossetti also into this service, and himself attended regularly until May 1858, after which time he gave only occasional lectures or informal talks. Rus-

kin was the first to provide casts from natural leaves and fruit in place of the ordinary conventional ornament. Among his pupils were Mr. George Allen (engraver, and afterwards Ruskin's publisher), Arthur Burgess (draughtsman and woodcutter), John Bunney (a skilful painter of architectural detail), and Mr. William Ward (a facsimile copyist of Turner). Arising out of Ruskin's work at the college were his books on 'The Elements of Drawing,' 1856, and 'The Elements of Perspective,' 1859.

Meanwhile Ruskin was engaged in many other subsidiary studies for the completion of 'Modern Painters.' In his continental tour of 1854 he was sketching in Switzerland. In 1855 he made studies of shipping at Deal, one outcome of which was his letter-press to Turner's 'Harbours of England,' 1856, with its famous description of a boat. In 1856 he was again in Switzerland, making studies at Olamouni and Fribourg for 'Modern Painters.' In 1858 he went to Switzerland and Italy, and spent some time in studying Paul Veronese at Turin. 'One day in the gallery,' says Mr. Augustus Hare, who happened to be there at the same time, 'I asked Ruskin to give me some advice. He said, "Watch me." He then looked at the founce in the dress of a maid of honour of the queen of Sheba for five minutes, and then painted one thread; he looked for another five minutes, and then he painted another thread. At the rate at which he was working he might hope to paint the whole dress in ten years; but it was a lesson as to examining well what one drew before drawing it.' Ruskin's diaries and letters show that he took the same minute labour in recording natural facts and impressions of places and pictures. Some illustration of his geological studies in Switzerland is given in the 'Proceedings of the Royal Society of Edinburgh,' 1858. Nearly all serious reading was done, he says, abroad; the heaviest box in the boot being always full of dictionaries. The subsequent task of composition was done at home 'as quietly and methodically as a piece of tapestry. I knew exactly what I had got to say, put the words firmly in their places like so many stitches, hemmed the edges of chapters round with what seemed to me the graceful flourishes, touched them finally with my cunningest points of colour, and read the work to papa and mamma at breakfast next morning, as a girl shows her sampler.' Ruskin revised carefully all he wrote; a study of his manuscripts shows that alterations were introduced for accuracy rather than for display. The third volume of 'Modern Painters' was written

at Denmark Hill in 1855 and published in the following January; the fourth followed in April, the fifth not till June 1860. The multifariousness of the work which delayed the completion of the book has been shown in the preceding paragraphs, and was amusingly set forth in a letter to Mrs. Carlyle of October 1855: 'I have written since May good six hundred pages. Also I have prepared about thirty drawings for engravers this year, retouched the engravings (generally the worst part of the business), and etched some on steel myself. In the course of the six hundred pages I have had to make various remarks on German metaphysics, on poetry, political economy, cookery, music, geology, dress, agriculture, horticulture, and navigation, all of which subjects I have had to read up accordingly, and this takes time. . . . During my above-mentioned studies of horticulture I became dissatisfied with the Linnean, Jussieuian, and everybody-elseian arrangement of plants, and have accordingly arranged a system of my own. . . . My studies of political economy have induced me to think also that nobody knows anything about that; and I am at present engaged in an investigation, on independent principles, of the nature of money, rent, and taxes, in an abstract form, which sometimes keeps me awake all night. . . . I have also several pupils, far and near, in the art of illumination; an American young lady to direct in the study of landscape painting, and a Yorkshire young lady to direct in the purchases of Turners, and various little by-things besides. But I am coming to see you' (printed by Prof. O. E. Norton in preface to Brantwood edition of *Aratra Pentelici*).

The last three volumes of 'Modern Painters,' though they complete with some method the plan of the work originally laid down by dealing further with ideas of beauty and discussing ideas of relation, contain Ruskin's thoughts on innumerable subjects. The sub-title which the author gave to the third volume, 'Of Many Things,' describes the whole book. It is 'a mass of stirring thoughts and melodious speech about a thousand things divine and human, beautiful and good.' The descriptive passages in the later volumes give back to the reader's eyes the hills and clouds and fields 'as from a fresh consecration' (address presented to Ruskin at Christmas 1885). 'I feel now,' wrote Charlotte Brontë, 'as if I had been walking blindfold; the book seems to give me eyes.' No prose book ever opened so many people's eyes to what nature is, to her beauty, her colour, to the stateliness and delicacy of mountains and trees, to the gracious aspect

of clouds, piled up in mountainous cumuli, or fleecy and floating, or dishevelled and streaming like the locks of the Graine. 'Modern Painters' contains some self-contradictions. It was not a treatise written at one time. It embodies the development of its author's ideas from his seventeenth to his forty-first year. But 'in the main aim and principle of the book there is,' says Ruskin, 'no variation from its first syllable to its last. It declares the perfectness and eternal beauty of the work of God; and tests all work of man by concurrence with, or subjection to that.' In its immediate purpose—the defence of Turner—'Modern Painters' is 'the most triumphant vindication of the kind ever published.' It has been called also 'the only book in the language which treats to any purpose of what is called æsthetics' (Mr. Leslie Stephen in *National Review*, April 1900). In its critical remarks upon painters its appreciations will survive, but many of its depreciations were exaggerated, and no longer stand. Apart from any more particular thesis the book is a sustained rhapsody on the beauty and wonder of nature, the dignity of art, and the solemnity and mystery of life. 'I venerate Ruskin,' said George Eliot after reading the later volumes of 'Modern Painters,' 'as one of the great teachers of the age. He teaches with the inspiration of a Hebrew prophet.' In style, no less than in matter, 'Modern Painters' shows many differences, and reveals the author's increasing mastery over the resources of language. It has been most admired for its descriptive passages, and these have indeed in prose never been surpassed. The only objection that can be urged against them is Matthew Arnold's that Ruskin 'tries to make prose do more than it can perfectly do.' Ruskin himself was of that opinion. The great poets, he said, did in a line what he did less perfectly in a page. But the book is memorable for much else than its word-paintings. Tennyson was once asked to name the six authors in whom the stateliest English prose was to be found. He replied, 'Hooker, Bacon, Milton, Jeremy Taylor, De Quincey, Ruskin.' But there are many notes in 'Modern Painters.' Its author's style had command of pathos, fancy, humour, irony, as well as stateliness and sonorous diction. The position attained by Ruskin by this work was recognised by a distinction conferred upon him in 1858, an 'honorary studentship' of Christ Church.

The last three volumes of 'Modern Painters' excited additional interest, and in their first edition command additional value, from the

beautiful plates, executed mostly from Ruskin's own drawings by the best engravers of the day. Ruskin never cared to assert his own artistic gifts, and no adequate exhibition of his drawings was held in his lifetime. In 1878 he exhibited a few of his own landscapes along with his Turners at the Fine Art Society, and he was an occasional exhibitor at the Old Water-colour Society, of which he was elected an honorary member in 1878. Some of his drawings are in public collections—the St. George's Museum at Sheffield and the Ruskin Drawing School at Oxford. A loan exhibition was held at the Fine Art Society's rooms in February 1901. He was an artist of real though restricted talent. He seldom attempted, and never successfully mastered, the use of oil-colours. He was, as he says himself, deficient in power of invention and design. (A painted window at the east end of Sir Gilbert Scott's church at Camberwell was designed partly by Ruskin, and he designed a window for the Oxford Museum.) He had no skill in the representation of the human form, though he could copy the figure well (e.g. his copy of Carpaccio's St. George at Sheffield). But his architectural drawings are incomparable in their kind, and some of his landscapes are as good as Turner's. The amount of his artistic production is astonishing, when we consider it as only a by-work of his life. It may be said that he was the most literary of artists and the most artistic of critics. What he claimed for himself was only such skill as to prove that he knew what the good qualities of drawing are. But many of his landscapes and architectural studies are as poetical as the passages of written words which accompany them. Ruskin is probably the only man who has described the same scenes with so large a measure of success in prose and verse and drawing. (For illustrated articles on Ruskin as an artist, see *Scribner*, December 1898; *Studio*, March 1900.)

With the completion of 'Modern Painters' begins a new period in Ruskin's literary life. He was then forty, and had finished the work by which he is popularly known as a writer of art. He now embarked on a new career. The title of his Manchester lectures in 1857, 'The Political Economy of Art,' was significant. Economics were henceforth to take the place of art. But it was not so much a change as a development. Ruskin's æsthetic criticism was coloured throughout by moral considerations. 'Yes,' said his father, after one of Ruskin's lectures on art, 'he should have been a bishop.' And Ruskin himself had proclaimed the moral basis of

his artistic criticism. 'In these books of mine,' he wrote in 'Modern Painters,' 'their distinctive character, as essays on art, is their bringing everything to a root in human passion or human hope. They have been coloured throughout, nay, continually altered in shape, and even warped and broken, by digressions respecting social questions, which had for me an interest tenfold greater than the work I had been forced into undertaking. Every principle of painting which I have stated is traced to some vital or spiritual fact, and in my works on architecture the preference accorded finally to one school over another is founded on a comparison of their influences on the life of the workman, a question by all other writers on architecture wholly forgotten or despised.' But how was this question to be pushed into the front, and brought into vital relation with the art? The thing, he felt with increasing force, had to be done. 'It is the vainest of affectations,' he wrote, 'to try and put beauty into shadows, while all real things that cast them are left in deformity and pain.' With such thoughts surging in his brain Ruskin went off to Switzerland so soon as 'Modern Painters' was fairly out of hand, busied himself in 'the mountain gloom,' and for the next ten years was silent, except for a few occasional papers and lectures upon merely artistic matters. He withdrew also more and more from the world and from his old home ties. His married life had been a failure, and the days passed in the happy companionship of his father and mother were now drawing to an end. His economic heresies, which had already begun to appear in his lectures, had somewhat weakened the bond of intellectual sympathy between him and his father; his emancipation from protestant orthodoxy, that between him and his mother. He remained to the end a most dutiful and affectionate son, but his inclinations turned to solitude. His health and spirits were alike broken, and sombre thoughts crowded in upon him. Another influence which tended to divert Ruskin from art and natural history was his friendship with Carlyle. They had become acquainted soon after the publication of the second volume of 'Modern Painters.' Ruskin was a frequent visitor at Cheyne Walk, and Carlyle would sometimes ride over to Denmark Hill and spend the afternoon in the gardens. Ruskin venerated Carlyle as his master, and treated him with beautiful kindness and deference. Carlyle on his side encouraged his disciple with ungrudging praise, and heralded each approach of his to the battlefield of social and economic contro-

versy with loud applause. 'No other man in England,' wrote Carlyle to Emerson, 'has in him the same divine rage against falsity.'

In 1860 Ruskin was at Chamouni with W. J. Stillman (*Century*, January 1888). The greater part of the next two years, including two winters, he spent in Savoy with Mr. George Allen, mostly at Mornex. Wherever he happened to be, Ruskin was always interested in the 'condition of the people' question. In Italy he had been impressed by the necessity of preventing inundation and promoting irrigation (*Arrows of the Chace* and *Verona and its Rivers*). Among the Alps he made several attempts to buy land from various communes with a view to instituting agricultural experiments. The peasant holders thought he must have discovered a secret gold mine and declined to sell. 'The loneliness is very very great,' he wrote from Mornex to Mr. Charles Elliot Norton (whom he had met at Geneva in 1856, and who became one of his dearest friends), 'and the peace in which I am at present is only as if I had buried myself in a tuft of grass on a battlefield wet with blood.' It was in this mood that Ruskin devoted himself to economic studies. The result of his studies and the body of his economic doctrine were comprised in 'Unto this Last' (1860), being papers contributed to the 'Cornhill'; 'Munera Pulveris' (1862), a sequel to this foregoing, contributed in part to 'Fraser'; some letters on 'Gold' (1863); 'Tims and Tide' (1867), and various minor letters and pamphlets in 1868. Faults which had not been absent from Ruskin's earlier books on art are conspicuous in his economic writings. Long ago, on the appearance of the first volume of 'Modern Painters,' Samuel Prout had pointed out the danger of exaggeration and discourtesy in controversy. In his books on economics Ruskin's petulance and contemptuous sarcasms had not always the justification of better knowledge. He was grossly unjust to Mill, with whose books he was insufficiently acquainted, and he raised needless animosities by not sufficiently distinguishing his terms. For his sins in this respect he paid the full penalty at the time. The papers in the 'Cornhill' caused so much offence that Thackeray stopped their publication—an event that did not interrupt Ruskin's friendly relations with the editor; and even Carlyle's recommendation and the friendship of Froude, then the editor of 'Fraser,' did not avail to avert a like fate in that magazine. Time brought its revenges, and Ruskin lived to see 'Unto this Last' (the book which he preferred to all the rest both for its substance and for its style)

attain a great vogue, and to find many of his ideas and suggestions pass into the accepted political currency. In the main his strength as an economic writer lies where also lies his strength as an æsthetic writer—namely, in his penetrating power of vision. To break down the walls which in a complicated social system hide from men's eyes the actual and ultimate facts was Ruskin's mission. Carlyle called Ruskin's economical essays 'ferce lightning bolts,' and in very truth 'his impeachments (of the existing order) flash on the perceptive senso as lightning on the eye.' His was one of the principal forces of the time in quickening the sympathies and elevating the moral standards of the community. In the field of economic theory the prominence given by Ruskin to some fallacies—such as his denial of the productivity of exchange and his condemnation of interest as distinguished from usury—interfered for some time with the acceptance of him as a serious authority. Moreover, his expositions, though often displaying the greatest logical dexterity, were not presented in a continuous and systematic form. He had a love of paradox and wilful mystification, and it requires some tact to disentangle serious propositions from playful fancies. But gradually Ruskin's work made itself felt—especially for its insistence upon the importance of the biological factor in all economic questions; and his writings have powerfully contributed to that recasting of economic doctrine which is still in progress. He insisted (1) 'that political economy can furnish sound laws of national life and work only when it respects the dignity and moral destiny of man; (2) that the wise use of wealth, in developing a complete human life, is of incomparably greater moment to men and nations than its production or accumulation, and can alone give these any vital significance; (3) that honourable performance of duty is more truly just than rigid enforcement of right; and that not in competition but in helpfulness, not in self-assertion but in reverence, is to be found the power of life' (address presented to Ruskin in 1885). Of the political suggestions contained in his economic writings of this period, some have by this time been carried out, and all are now within the range of practical discussion. His principal points were: a system of national education, the organisation of labour, the establishment of government training schools, old-age pensions (for 'soldiers of the ploughshare as well as of the sword'), and the provision of decent homes for the working classes. It requires some effort to realise that this was the programme

which forty years ago was howled out of the magazines.

Ruskin greatly extended his influence during the period 1855-70 by lectures in all parts of the country. A complete list is given in Wise and Smart's 'Bibliography.' Exclusive of lectures at Oxford, they number fifty. He lectured at Eton and Woolwich; at the Royal Institution and before various learned societies; at working men's clubs and institutes; in most of the principal towns of the country. Sometimes the lectures were announced to be on art, sometimes on politics, or science, or history, or economics. The titles mattered little. He apologised on one occasion for calling his lecture 'Cryetallography,' when it turned out to be on 'Cistercian architecture.' With Ruskin the teaching of art was the teaching of everything. He used the platform as a pulpit. His eloquence was that of the writer rather than the orator. He once told a London audience, with a touch of his peculiar humour, that he had intended to deliver them an extempore lecture, but that the trouble of writing an extempore lecture and then learning it by heart was too much for him, and so he would simply read what he had to say. He was a magnificent reader. The quotations from Homer or from Chaucer or from some other favourite author were declaimed as no other public man, except Gladstone, could have declaimed them. He read his own works with such perfect attention to emphasis and rhythm that they vibrate, like a strain of music, in the memories of his hearers. His voice was not powerful, but had a peculiar timbre, which was at once penetrating and attractive. His old-fashioned pronunciation, with the peculiar roll of the r's, seemed to be in perfect harmony with the mediæval strain in his thought. Everywhere he had crowds hanging on his lips. Even the scientific men whom he loved to denounce came and said, 'Let him roar again.' It should be remembered that nearly all Ruskin's later books were written for oral delivery. He had no space to convince by a long train of argument. His aim was to impress, and often to startle. In a few emphatic sentences he sought to bring his hearers to what he considered the root of the matter. The style he adopted was often too curt and absolute. But it was simpler, less elaborate, less self-conscious than that of his earlier works. 'It is not a style of purple patches, but its whole substance is crimsoned with the passionate feeling that courses through the eager and animated words' (NORRIS). An important series of lectures, delivered to various audi-

ences in 1857-8-9, were brought together under the title 'The Two Paths' (1859). The title indicates a common thread of doctrine running through discourses on many different subjects—namely, the responsibility of the student for choice between art which is conventional in design, and pursued for the sake of display, and art which is devoted to the record of natural fact. At Christmas 1863 Ruskin returned from his mountain solitudes. On 3 March 1861 his father died. Miss Joanna Ruskin Agnow, his second cousin once removed, then came to live with his mother, but Ruskin for some time did not leave her side. In 1860, 1868, and 1869 he made tours with various friends on the continent. In the former year he sided with Carlyle on the Jamaica question, and made a speech at a meeting of the Lyra defence committee. Of the lectures of this period, the most important were those on the pleasures of reading and the sphere of women, collected under the title 'Sesame and Lilies' (1865), and on the duty of work and its reward, collected as 'The Crown of Wild Olive' (1866). To the same period belongs 'The Ethics of the Dust' (1866), a series of conversational lessons, delivered at a girls' school (Wimington Hall, Cheshire), in which, taking crystals as his text, Ruskin drew from them such lessons as their various characteristics suggested. 'A most shining performance,' wrote Carlyle, when the lectures were published; 'not for a long while have I read anything a tenth part so radiant with talent, ingenuity, lambent fire.' Ruskin's next work of importance was suggested by the reform agitation. In a series of 'Letters to a Working Man at Sunderland,' first published in newspapers at Manchester and Leeds (March to May 1867), and afterwards collected into 'Time and Tide' (1867), Ruskin embodied his thoughts on the question of the day. The letters are discursive and fanciful, but their main drift was to show that true 'reform' must be individual rather than by class, and moral rather than political. In this same year (1867) the honorary degree of LL.D. was conferred upon Ruskin at Cambridge, and he delivered the Rode lecture (not yet published). His subject was 'The Relation of National Ethics to National Art.' In 1870 the university of Oxford proposed to confer the honorary degree of D.C.L., but the proposal was postponed owing to his illness. The degree was conferred in his absence in 1893. In 1871 he had been elected lord rector of St. Andrews University, but, as a professor in an English university, he was found to be ineligible.

In connection with Ruskin's rôle as a preacher, some facts may be stated about his practice. Of the riches described by him in those books, 'The Treasures of true Kings,' he was himself a persistent accumulator and distributor. During his father's lifetime the son was allowed to act as his almoner—in generous and judicious help to artists, and in all sorts of gentle and secret charity. On his father's death Ruskin inherited a fortune of 167,000*l.*, in addition to a considerable property in houses and land. The whole of this was dispersed during his lifetime, and he lived during his last years on the proceeds of his books. In 1886, by deed of gift, he made over his house and its contents to Mr. and Mrs. Arthur Severn, to whom also by will he left the residue of his property, 'praying them never to sell the estate of Brantwood, nor to let any portion of it upon building lease, and to accord during thirty consecutive days in each year such permission to strangers to see the house and pictures as I have done in my lifetime.' (As literary executors Ruskin appointed Mr. C. E. Norton and Mr. A. Wedderburn, Q.C.) Details of much of Ruskin's expenditure are to be found in curious pieces of self-revelation embodied in the appendices to 'Fors Clavigera.' His pensioners were numbered by hundreds; his charities, if sometimes indiscriminate, were as delicate as they were generous. He educated promising artists, and gave commissions for semi-public enterprises. He presented valuable collections of Turners to Oxford and Cambridge. To the Natural History Museum he presented several mineralogical specimens, including the large 'Colenso diamond' ('in honour of his friend the loyal and patiently adamantine first bishop of Natal') and the 'Edwardes Ruby' ('in honour of the invincible soldiery and loving equity of Sir Herbert Edwardes's rule by the shores of Indus'). To many schools and colleges he presented cabinets of minerals or drawings. In some forms of philanthropy he was a pioneer. He established a model tea shop. He organised, for the relief of the unemployed, gangs of street cleaners. He was the first to give Miss Octavia Hill the means of managing house property on the principle of helping the tenants to help themselves. He shared as well as gave. He thought no trouble too great to encourage a pupil or befriend the fallen.

With the last decade of Ruskin's active life (1870-80) his career entered on a new phase. The writer on economics now essayed to become practical reformer. In part

the attempt was the payment of 'ransom.' The quiet and comfort of the house and grounds at Denmark Hill became intolerable to him from the thought of the misery of London. In 1871 his mother died, and the house was given up. Miss Agnew married Mr. Arthur Severn, and they lived in the old Ruskin home on Hems Hill. Ruskin bought from William James Linton [q. v. Suppl.] a house on Coniston lake, overlooking the Old Man, called Brantwood. This was his home for the remainder of his life. For some years, however, he paid frequent visits to London, where he still mixed in congenial society. He was also a member of the Metaphysical Society. The enlargement of the house and grounds at Brantwood became one of his principal pleasures, but he could not enter into his peace without making some effort to cure what seemed to him the anarchy outside. He established first an organ for his propaganda. This was 'Fors Clavigora,' a monthly letter 'to the workmen and labourers of Great Britain.' It is one of the curiosities of literature. Its discursiveness, its garrulity, its petulance are amazing. On reading it one is not inclined to dispute what Ruskin somewhere says of himself, that he was 'an impetuous and weakly communicative person.' Some of the eccentricity of his monthly miscellany was due to the gradual approach of a morbid irritability of the brain. But 'Fors' is full of passionate intensity; it abounds in forcible writing, and the ingenuity with which innumerable threads are knit together to enforce the author's economic principles is remarkable. For his new organ Ruskin provided himself with a new publisher. He set up his old pupil, Mr. George Allen, in the trade, and established a system of net prices. At first no discount was allowed to the booksellers; they were expected to add their own percentage to the published price. After a few years this heroic policy was abolished. The sale of Ruskin's books rapidly grew, and for many years before his death yielded him on the average 4,000*l.* a year. In America the sale of his books in cheap pirated editions had for many years been very extensive. Ruskin's monthly organ was used to preach a crusade and to found a society. 'I will stand it no longer,' he cried in the opening number of 'Fors' (January 1871), and threw himself with characteristic enthusiasm and self-sacrifice into an attempt to found a Utopia in England. There was to be a guild of companions enrolled under the banner of St. George to make 'a merrie England.' Tithes

were to be given, and Ruskin himself paid 7,000*l.*—a tithe of his then remaining possessions—into a trust for the purposes of the guild. Sir Thomas Dyke Acland and Francis Cowper-Temple (afterwards Lord Mount-Temple) were the original trustees. In May 1871 the scheme was made public. In 'Fors' for that month Ruskin called on any landlords to come and help him 'who would like better to be served by men than by iron devils,' and any tenants and any workmen 'who could vow to work and live faithfully for the sake of the joy of their homes,' 'That food can only be got out of the ground and happiness out of honesty' were the first two principles which the guild of St. George was to demonstrate; the third was that 'the highest wisdom and the highest treasure need not be costly or exclusive' (Prince Leopold's speech on Ruskin). The establishment of these principles led to three corresponding experiments, of (1) an agricultural, (2) an industrial, and (3) an artistic character respectively. The agricultural experiments were not a brilliant success. Ruskin drew many charming pictures of his ideal settlements, but the realities did not correspond to them. Sometimes the land, sometimes the settlers, and sometimes both proved intractable. Ruskin reaped from St. George's Farms a plentiful crop of disappointments and grumbles. An exception may be made in favour of St. George's land at Barmouth, of which an attractive account by Blanche Atkinson has been published (1900).

Among industrial experiments which directly or indirectly owe their origin to Ruskin were the revival of the hand-made linen industry in Langdals, which under Mr. Albert Fleming—'master of the rural industries of Loughrigg'—gives employment to many of the peasants. Of a like nature was a cloth industry at Laxey, in the Isle of Man, established for Ruskin by Mr. Egbert Rydings; there are also one or two co-operative undertakings of a successful character which owe their inception to Ruskin's teaching (see Cook's 'Studies in Ruskin' and 'Ruskin and Modern Business' in the *Spectator*, 17 Feb. 1900).

The artistic branch of 'St. George's' work took shape in a museum at Sheffield. Originally established in 1875 in a cottage at Walkley with Henry Swan, a former pupil of Ruskin at the Working Men's College, as curator, the management of the museum was in 1890 taken over by the Sheffield corporation, and removed to an old hall in Meersbrook Park. Ruskin had for some years employed artists to sketch mediæval

buildings in France and Italy, and copy pictures. An exhibition of these drawings was held at the Fine Art Society in May 1886. Most of them are now at Sheffield. Ruskin also sent to the museum, largely at his own cost, a collection of minerals and precious stones, architectural casts, drawings by himself and others, and a few manuscripts. The collection, admirably catalogued and arranged by its second curator, Mr. William White, attracts many visitors; it contains a series of examples illustrating Ruskin's point of view in many arts, and his ideas of the true function of local museums. St. George's schools were to be another institution in what Ruskin sometimes called his 'island of Barataria.' For he was not always quite so serious as his disciples supposed. It is not reported that he received with unmixed gratitude the homage of a disciple who spent most of his time in traversing the country with his own letters for delivery by foot, in order to discountenance the accursed railway system. Ruskin did not establish the schools which he sketched out very attractively in 'Fors.' But he wrote a prosody for use in them, and edited a 'Shepherd's Library.' Of more immediate applicability were the May Queen and Rose Queen festivals, which he established in some existing schools with characteristic generosity and ingenuity in graceful ordinance. He took much trouble in corresponding with the queens of his crowning (*Saint George*, October 1900). Ruskin was also the inspirer and the first president of 'The Art for Schools Association,' a body which has done extensive work in circulating high-class pictures among the elementary schools.

Ruskin's practical contributions towards establishing Utopia were suggestive in many directions rather than conclusive in any. In judging them, it should be remembered that the years in which he entered upon the rôle of social reformer were also those in which he was working himself almost to death at Oxford. In 1870 a professorship of fine arts (endowed by Felix Slade [q.v.]) was for the first time established at Oxford, and Ruskin accepted a call to create the part of art professor. The work which he put into it was enormous. In the first place he delivered a long series of lectures: eleven courses (1870-7), two courses (1883-4). Eight of his later works (enumerated in the bibliography below), several of them including illustrations specially prepared, were written as Oxford lectures. On these he took greater pains, he said, than on any of his other books, and in them he revised and

recast in the light of maturer knowledge the whole body of his art-teaching. The inaugural course is the final and most compact of all his statements on the fundamental canons of art. He was at the same time engaged in preparing handbooks (never completed) on geology ('Deucalion') and botany ('Proserpina'). Ruskin was not in sympathy or touch with the scientific movement of his time. But he had an extraordinary gift for observation. He used to say that he might, if he had chosen, have become the first geologist in Europe. His interest in geology and mineralogy was constant, and he anticipated in 1863 some of the modifications since made in the glacier theories of the day. For an instance of Ruskin's acute observation, mingled with fancy and poetry, the reader may refer to his description of the swallow in 'Love's Moinie.'

Ruskin conceived it to be a further part of his professorial duty 'to give what assistance I may to travellers in Italy.' The result was a series of guide-books to Venice, Florence, and Amiens (see bibliography below, 35, 39, 40, and 46). For the purpose of these books, as also of fresh illustrations for his lectures, Ruskin made several continental journeys, devoting special study to the works of Botticelli and Carpaccio. Ruskin also founded a drawing school at Oxford, to which he presented many valuable works of art. He endowed a drawing master, giving 5,000*l.* to the university for this purpose, and devoted long days to arranging series of examples (including many sketches of his own made for this purpose) and cataloguing them. Ruskin taught in the school, but very few undergraduates attended. His lectures, on the other hand, were crowded. For his first lecture (8 Feb. 1870), announced for the museum, the crowd was so great that an adjournment had to be made to the Sheldonian theatre. 'I have heard him lecture several times,' says Mr. Mallock, 'and that singular voice of his, which would often hold all the theatre breathless, haunts me still sometimes. There was something strange and aerial in its exquisite modulations that seemed as if it came from a disconsolate spirit hovering over the waters of Babylon and remembering Sion.' (For impressions of Ruskin's Oxford lectures see Cook's *Studies in Ruskin and Century Mag.* February 1898.)

Ruskin also devoted much time to cultivating the friendship of individual members of the university. In April 1871 he was admitted an honorary fellow of Corpus. His rooms—on the first floor right of No. 2 stair-

case in the fellows' buildings—in which he placed many of his choicest pictures, drawings, minerals, and manuscripts, were 'an artistic Mecca,' and 'an intellectual centre of the highest kind' (see 'Ruskin at Corpus' in the *Pelican Record*, June and December 1894). Among Ruskin's disciples at Oxford was Mr. Mallock, who has given a good picture of him under the figure of Mr. Herbert—the only character sketch in 'The New Republic' which is not a caricature. Prince Leopold was a constant attendant at Ruskin's lectures, and Ruskin stayed with him at Windsor Castle in January 1878. The prince was one of the trustees for the Ruskin drawing school, and in his first public address (on 'University Extension,' at the Mansion House, 10 Feb. 1879) paid a high tribute to 'the privilege of Professor Ruskin's teaching and friendship.' One of the methods which Ruskin adopted for gathering a circle of ardent young men around him was the subject of much sarcastic comment. This was the road-digging experiment at Hinksey. A cynical don was fond of describing the strange adventures which befell him and his horse when they unwittingly attempted to ride along the Ruskin road. No one was more alive to the humorous side of the affair than Ruskin himself. The road, he used laughingly to admit, was about the worst in the three kingdoms, and for any level place in it he gave the credit to his gardener, whom he incontinently summoned from Brantwood. But this experimental application of 'the gospel of labour' attracted a good deal of attention. In later years Ruskin used to talk of Tolstoi as his successor, and Tolstoi on his side spoke of Ruskin as one of the greatest men of the age (*Cornhill*, June 1892). Among the road-diggers was Arnold Toynbee [q. v.], and upon him 'introduction with Ruskin had a stimulating effect more durable than the actual improvement of the road near Hinksey' (F. C. MONTAGU, *Arnold Toynbee*). 'I tell you,' said Ruskin at the close of one of his Oxford lectures, 'that neither sound art, policy, nor religion, can exist in England until, neglecting, if it must be, your own pleasure gardens and pleasure chambers, you resolve that the streets which are the habitation of the poor, and the fields which are the playgrounds of their children, shall be restored to the rule of the spirit, whosoever they are, in earth and heaven, that ordain and reward, with constant and conscious felicity, all that is decent and orderly, beautiful and pure.' It was the conviction of this truth that led shortly afterwards to Toynbee's work in the East-

end, and to the various university 'settlements' which grew out of it. Ruskin's influence has been considerably spread by Ruskin societies, unions, and guilds in various parts of the country. In Oxford a hall for working men is called by his name, and in Tennessee a Utopian settlement.

Under the double strain of his work at Oxford and of that of St. George's guild Ruskin's health broke down. During all this period he was also largely engaged in writing letters to the press on polemical subjects and in a polemical temper. He was like the living conscience of the modern world, and felt acutely the wrongs and wrongdoings of others. In no age could his sensitive heart have escaped these sorrows. 'Le pauvre enfant, il ne sait pas vivre' was the verdict of his Swiss guide upon him. In an earlier age he might have become a saint. In his own age he spent himself, his time, and his wealth in trying to illuminate and ennoble the lives of others. He was well aware that the dispersal of his energies in so many directions militated against full success in any. Yet he craved in moments of weariness for immediate and tangible results. He was disappointed that more of his friends did not come forward and enrol themselves under St. George's banner. 'It is not my work that drives me mad,' he once said, 'but the sense that nothing comes of it.' The strain upon his nervous system was increased by a private sorrow. He was deeply attached to a young Irish lady, Miss Rose La Touche (the 'Roeie' of 'Præterita,' vol. iii.) She had been introduced to him as a young girl in 1858; he had taught her drawing and hoped in after years to make her his wife. In 1872 she decided that it was impossible. Religious differences were among the obstacles. She was a strict evangelical. A little work of prose and verse published by her in 1870 is expressive of a deeply religious but somewhat morbid temperament. She fell into ill-health and died in 1875. In Ruskin's writing three phases in religious feeling may be distinguished. He was brought up in the strictest sect of evangelicalism. In middle life he outgrew this early faith, and though he never lost his conviction of a personal God his views were widely tolerant. In the writings of his middle period he seldom made any appeal to Christian sanctions. The virtue which he taught was that of the Greeks, 'whose notion of heroism was giving one's life for a kiss and not getting it.' From 1875 onwards he resumed in his writings, under the stress of heightened feeling, a more definitely Christian standpoint. Of

him, as of other eminent men, it was rumoured that he was inclined to Roman catholicism. He enjoyed lunching, it was true, with 'my darling cardinal' (Manning), but he found the 'puff pastry like papal pretensions—you had but to breathe on it and it was nowhere.' The death of 'Rosie' was the greatest grief of Ruskin's life. He suffered much from sleeplessness and had unnaturally vivid dreams. He came in contact with spiritualism, and mediums showed him the spirit of his dead lady. Her memory mingled in his mind with the vividly realised presence of St. Ursula, whose picture by Carpaccio was the subject of many references in his later lectures. In 1878 he had arranged an exhibition of his Turners at the Fine Art Society, and had nearly finished a catalogue for it, when he was seized with a dangerous attack of brain fever. In a few weeks he recovered, and was able to add some further notes to the catalogue. A body of subscribers presented him at this time with Turner's drawing of 'Splügen,' Ruskin's favourite Turners hung in his small and simple bedroom at Brantwood. (A picture by Mr. Arthur Severn of this room in which he died was exhibited in 1900.) In the same year (1878) the Grosvenor Gallery was opened, and Ruskin took occasion in 'Fors' to write an enthusiastic account of Sir Edward Burne-Jones [q. v. Suppl.], whose genius Ruskin had been among the first to recognise, and to whom in earlier years he had given commissions in Italy. Ruskin at the same time made a contemptuous reference to one of Mr. Whistler's 'Nocturnes.' Mr. Whistler brought an action for libel, which was tried before Baron Huddleston on 25 and 26 Nov. The jury awarded the plaintiff one farthing damages. Ruskin's costs were paid by a public subscription. Mr. Whistler took his revenge in a characteristic pamphlet (republished in 'The Gentle Art of making Enemies'). In 1879 Ruskin resigned his professorship, but was able to do occasional work on his many unfinished books. In 1880 and 1881 his illness recurred. An interval of restored health followed, and in 1883 he felt well enough to accept a second call to the Oxford professorship. His first series of lectures on 'The Art of England' (the leading schools and artists of the day) showed no failure of power; there were in them a greater geniality of criticism and a more hopeful outlook which seemed to augur well for the future. But the promise was delusive. The excitement of his public lectures, attended by ever-increasing and enthusiastic audiences,

was too much for him. The nervous strain was more than he could withstand. A second series of lectures, on 'The Pleasures of England,' never very coherent, was broken off on the advice of Acland, Jowett, and others of his friends. He had been much vexed by the refusal of the university, on the ground of lack of funds, to give him the means for extending the Ruskin drawing school. This was followed by a vote for a new laboratory in which vivisection was to be permitted. In December 1884 Ruskin resigned his professorship. He had previously revoked a bequest of his remaining Turners and other treasures to the university.

Ruskin now retired into seclusion at Brantwood. His cousin, Mrs. Severn, with her husband and family, lived with him. To her he was deeply attached; she tended him in his illness and saved him from all preventable irritations. His brain attacks were intermittent, and at intervals during the next five years he did a good deal of miscellaneous literary work. He introduced to the public the sketches of Tuscan life in pen and pencil by his American friend, Miss Francesca Alexander. He wrote occasional articles in the magazines; prefaced various books by his friends; wrote a life of Sir Herbert Edwards ('A Knight's Faith'); and continued his letters on questions of the day to the 'Pall Mall Gazette' and other papers. He also interested himself in educational experiments in the Coniston school. But the most important work of his last period was the fragment of autobiography, undertaken at the suggestion of his friend, Prof. C. E. Norton, and published at intervals during 1885-9 under the title of 'Præterita: outlines of Scenes and Thoughts perhaps worthy of Memory in my past Life.' This book contains occasional passages of description as fine as anything in 'Modern Painters,' and is marked throughout by limpid ease in the narrative, by the keenness of its recollections, and by brilliant character-sketches of friends and acquaintances.

'Præterita' was, however, not completed. Ruskin had planned out its conclusion, and chosen titles—in which respect he always showed a curious felicity—for the remaining chapters, as also for many chapters in a supplementary book of illustrative letters, &c., called 'Dilecta.' But the excitement of writing was too much for him. 'It is all nonsense,' he wrote to one of his friends, 'what you hear of overwork as the cause of my illness. These two times of delirium were both periods of extreme mental energy in perilous directions.' On one occasion he was talking with intense eagerness to Car-

lyle. 'You must take care,' said the old man; 'you will be making yourself ill once more.' Ruskin quite simply stopped short like a child. 'You are right, master,' he said, and went on to talk of something else. At a later period, however, he sank into deep depressions, and longed even for the visions to return. 'They were mostly visions of hell, it is true,' he said, 'but sometimes visions of heaven.' In the spring of 1887 he was again seized with brain trouble. He went in the autumn of that year to Sandgate, where he remained, with short visits to London, until the following summer—sometimes able to write, at others in a state bordering on insanity. In 1888 he made his last foreign journey—to France, Switzerland, and Italy. On 18 Sept., by way of a short epilogue for a reissue of 'Modern Painters,' he wrote 'beneath the cloudless peaks of the snows of Chamouni what must be the last words of the book which their beauty inspired and their strength guided.' His foreign tour brought him no renewal of strength. In the following summer he spent some time at Seascale, and there he wrote a chapter of 'Præterita.' It is dated 19 June 1880, and marks the close of his literary career. From that time forward infirmities of mind and body grew steadily upon him. Physically he enjoyed fairly good health for some years; but his brain was in decay, leading sometimes to disordered violence, more often to listless calm. 'Poor finger!' he said to one of his old friends, 'it will never hold pen again. Well, it has got me into much trouble; perhaps it is better so.' At times he recovered some of his old brightness, and talked of things and places and persons that he loved; sometimes also playing chess, a game of which he was very fond. 'That's my dear brother Ned,' he said one night, as he passed a portrait of his friend, Burne-Jones, on the stairs. The artist died the next day, and Ruskin was grievously affected. As outdoor air and exercise became distasteful, his hold on the world, alike of current affairs, of thought, and of imagination, grew weaker and weaker. He would sit still for hours, sometimes looking from his window upon his favourite view of lake and fell; at other times, with head bent listlessly, seeing and hearing his friends, but hardly joining at all in any general conversation. On his eightieth birthday he was presented with illuminated addresses from the university of Oxford, and from a body of admirers, including most of the leading men in art and literature. On 18 Jan. 1900 he was seized by influenza, the heart failed, and on

20 Jan., at 2 p.m., he passed peacefully away. The dean and chapter of Westminster offered a grave in the Abbey, but this was declined on the ground that he had expressed a wish to be buried wherever he might happen to die. He was laid in the churchyard of Coniston on 25 Jan. In Poets' Corner was placed a medallion of him (by Onslow Ford, R.A.), immediately above the bust of Sir Walter Scott.

Ruskin was about 5 feet 10 inches in height, and as a young man he gave the appearance of being taller owing to his slight build. In later years his shoulders were bent, and his whole frame seemed shrunk. His smile was always radiant. He had piercing blue eyes under full brows. In middle life he grew side-whiskers; from the year 1879 a beard which, in his old age, was allowed to grow to its full length, giving him a very venerable appearance. His hair was brown, which never to the last turned completely grey. A light-brown spun twined, a double-breasted waistcoat, an ill-fitting blue frock-coat with velvet collar, unstarched wristbands, and amplitude of blue necktie worn as a stock, reflected something of the quaintness of his mind and talk. If it were not for the peculiarly delicate hands and tapering fingers, denoting the artistic gifts, 'the Professor' (as he was habitually called) might have been taken for an old-fashioned country gentleman. Ruskin was an indefatigable worker. He always rose with the sun, and much of his literary work was done before his friends or the rest of his household were awake. He had the genius for friendship, and his private correspondence, no less than his public, was large. To innumerable friends he wrote in the charming vein which is to be seen in 'Hortus Inclusus' and other collections, and always in the same exquisitely neat and beautiful handwriting. To strangers who sought his help he would often write the most painstaking letters of counsel and encouragement. He was at his best when showing to a sympathetic friend his collections of pictures and drawings, his precious stones and minerals, his manuscripts and missals at Denmark Hill or Brantwood, for he took the keenest delight in sharing his treasures and his pleasures with others. He was sometimes momentarily hot-tempered, and was not averse from the use of strong language. But of this arrogance and intolerance often displayed in his writings when he assumed the prophet's mantle, there was in his private intercourse no trace. His written denunciations of classes of his fellow-countrymen and of particular persons

were not intended to be taken too literally. No one was more courteous to radicals, lawyers, political economists, scientific persons, and others whom he professed to abhor. In general company Ruskin's conversation was apt to become monologue. On these occasions the beauty of phrase and flow of magical words were wonderful to listen to. D. G. Rossetti said that some of those monologues made all Ruskin's written words feeble and uninspired by comparison. On more familiar occasions he was whimsical, paradoxical, dictatorial, incalculable. There was always a flash of irony playing about his talk, which puzzled, teased, or delighted his listeners according to their temperament. His charm of manner was irresistible. 'No one,' says Mrs. Carlyle, 'managed Carlyle so well as Ruskin. It was quite beautiful to see him. Carlyle would say outrageous things, running counter to all Ruskin cared for. Ruskin would treat Carlyle like a naughty child, lay his arms around him, and say, "Now this is too bad!"' Of young girls Ruskin was the indulgent and devoted slave. But to all his friends, young and old, boy or maid, humble or distinguished, his manner had something of the same caressing charm. 'For the sake of others,' says Professor Norton, 'who have not known him as I have, I would declare my conviction that no other master of literature in our time has more earnestly and steadily endeavoured to set forth, for the help of those whom he addressed whatsoever things are true, honest, just, pure, and lovely; or in his own life has more faithfully tried to practise the virtues which spring from the contemplation of these things.' 'To my dear and otherreal Ruskin,' was Carlyle's inscription in the last book he gave to his disciple. 'I should wish,' wrote Jowett, after visiting Ruskin at Brantwood, 'never to lose the impression of the kind welcome which I received from him. He is the gentlest and most innocent of mankind.'

Among many portraits of Ruskin are: 1. As a child, aged three and a half, oil-picture by James Northcote, R.A. (at Brantwood). In this, as Ruskin relates in 'Proterita,' there is a background, at the child's special request, of 'blue hills.' 2. At the age of twenty-three, water-colour by George Richmond, R.A., exhibited at the academy, 1842 (at Brantwood). 3. At the age of thirty-four, oil-picture by Millais, full-length, standing bareheaded on the rocks beside Glenfinlas (in the collection of the late Sir Henry Acland; now, as an heirloom, in the possession of Rear-admiral Acland).

4. At the age of thirty-eight, head in chalk by George Richmond, R.A. (reproduced as frontispiece to the 'Selections' of 1882, now at Brantwood; not flattery, said the artist, 'only the truth lovingly told'). 5. A crayon drawing by Rossetti (formerly in the possession of Mr. Pocock of Brighton). 6. An etching by M. Georges Pilotelle, 1876 (produced for Nos6da of the Strand). 7. A bust by Boehm, 1880 (in the Ruskin Drawing School, Oxford). 8. Life-size portrait in water-colour by Mr. Herkomer, R.A., exhibited at the Grosvenor 1881. 9. Executed in 1884, and exhibited at the New Gallery in 1889, a bust by Mr. Conrad Dressler; the first portrait of Ruskin with a beard: 'it makes me look far crazier,' said the sitter, 'than ever I've been.' 10. Painted in 1898-9, with long board, oil-picture by Arthur Ssvern (now at Brantwood). 11. A fine photograph by Mr. F. Hollyer, half-length, seated with long flowing beard, 1896. (See arts. on portraits of Ruskin in 'Mag. of Art,' 1891.)

The complete bibliography by Thomas J. Wise and James P. Smart, issued in 1893, and giving letters, lectures, etc., included 1,152 entries. 114 volumes (large or small) bear Ruskin's name as author, and to twenty-nine other volumes he contributed prefaces or other matter. A complete collective edition of his works, prepared by E. T. Cook and A. Wodderburn, in 38 volumes, appeared 1903-9. Of an octavo series of 'Works' commenced in 1871, only eleven volumes were published, in boards and in what is called in the trade 'Ruskin calf,' a purple chosen by himself. Since 1882 many books were issued in a uniform 'small edition,' crown 8vo. Since 1907, when copyright expired in all Ruskin's books published before 1865, non-copyright reprints have been numerous at cheap prices. The following is a chronological list of the principal works and copyright editions; 1. 'The Poetry of Architecture,' in London's 'Architectural Magazine,' 1837-8; (first published separately, 1893, medium 4to (illustrated)). 2. 'Modern Painters,' 1843, vol. i.; 1846, vol. ii.; 1856, vol. iii. (illustrated); 1866, vol. iv. (illustrated); 1880, vol. v. (illustrated). Vol. i. of the first and second editions was large crown 8vo; the third edition and all the other volumes were imperial 8vo. The first edition of this book commands high prices on account of the plates. 'Autograph edition,' 1873, 5 vols. imperial 8vo (impressions from the original plates); 'complete edition,' with new index and collation of different editions, 1888, 6 vols. imperial 8vo (three additional plates, some of the others re-engraved); small complete edition (reduced plates),

1807, 6 vols. crown 8vo.; 're-arranged edition' of vol. ii. 1883, crown 8vo (now in 5th edit.) 'Frondees Agrestes' (readings in 'M.P.') 1875, crown 8vo (now in 31st thousand). 3. 'The Seven Lamps of Architecture' (illustrated), 1849, imperial 8vo (plates drawn and etched by the author); second edition (plates re-etched by R. P. Cuff), 1855; third edition (with new preface and selected aphorisms set in larger type), 1880; small edition, 1890 (now in 31st thousand). 4. 'Poems', 1850, post 8vo (mostly collected from periodicals), privately printed. Very scarce; a copy has fetched 50l. Published (with additions), 1891, 2 vols. 4to, illustrated; small edition (reduced plates), 1891. 5. 'The King of the Golden River' (illustrated by R. Doyle), 1861, small square 8vo (now in 22nd thousand). A fine copy of the first edition has fetched 10l. 6. 'Pre-Raphaelitism', 1851. 7. 'The Stones of Venice' (illustrated), imperial 8vo, vol. i. 1851, vol. ii. 1853, vol. iii. 1858; 'Autograph edition' of the three vols. 1874, imperial 8vo; 'complete edition' (with new index), 1880, 3 vols. imperial 8vo; small edition (complete), 1898; 'Traveller's edition' (selected chapters with new matter, unillustrated), 1879, 2 vols. crown 8vo (now in its eighth edition). 'On the Nature of Gothic Architecture', 1854 (Kelmscott Press edition, 1892). 8. 'Examples of the Architecture of Venice' (plates, with descriptive letterpress), 1851, atlas folio. 9. 'Notes on the Construction of Sheepfolds', 1851, 8vo (4th copyright edition). 10. 'Giotto and his Works in Padua' (notes to accompany a series of woodcuts executed for the Arundel Society), 1864, royal 8vo; small edition, with photographic illustrations of the frescoes, 1900. 11. 'Lectures on Architecture and Painting' (illustrated), 1853, crown 8vo; small copyright edition, 1891 (exceeding 6,000 copies). 12. 'Notes on some of the principal Pictures exhibited in the Rooms of the Royal Academy, &c.', 8vo, No. i. 1855, ii. 1856, iii. 1857, iv. 1858, v. 1859, vi. 1875. 13. 'The Harbours of England' (illustrated with engravings from drawings by Turner), 1850, folio; small edition, with photographs from the plates, 1894. 14. 'Notes on the Turner Gallery at Marlborough House' (oil-paintings now at the National Gallery), 1856, 8vo. 'Catalogue of Sketches and Drawings by Turner' (now at the National Gallery), 1857, 8vo. 'Catalogue of the Turner Sketches in the National Gallery', 1857, pt. i. 8vo (no more issued). 'Catalogue of the Drawings and Sketches of Turner at present exhibited in the National Gallery', 1881, 8vo; illustrated edition, crown 8vo, 1899. 15. 'The Political Economy of

Art', 1857, 16mo; reissued with additional papers under the title 'A Joy for Ever (and its Price in the Market)', 1880 (vol. xi. of 'Works'); small edition, 1887 (now in its 13th thousand). 16. 'The Elements of Drawing' (illustrated), 1857, crown 8vo; new edition (uniform with the 'small edition'), 1892 (sale exceeding 14,000 copies). 17. 'Inaugural Address at the Cambridge School of Art', 1858, 8vo. 18. 'The Oxford Museum', by H. W. Acland and John Ruskin (illustrated), 1859, post 8vo; new edition, with preface by Acland and message from Ruskin, 1893, crown 8vo. 19. 'The Two Paths' (illustrated), 1859, crown 8vo; new edition (vol. x. of 'Works'), 1878, 8vo; small edition, 1887 (sale exceeding 14,000 copies); the edition of 1859 contains two plates afterwards cancelled. 20. 'The Elements of Perspective', 1859, crown 8vo (the only edition). 21. 'Unto this Last', 1862, foolscap 8vo; a cheaper copyright edition (exceeding 35,000); 'Popular' edition (in paper covers) issued in 1900, and now in its 31st thousand; the total copyright issue has exceeded 70,000. There have also been several editions of a penny pamphlet of extracts entitled 'The Rights of Labour according to John Ruskin'. 22. 'Sesame and Lilies', 1865, foolscap 8vo. This, the most popular of Ruskin's works, has been issued in four different forms: (a) the original edition, two lectures with no preface; (b) two lectures, with a long preface (about the Alps), 1865, three editions; (c) 'Works' series, vol. i. with a new preface (largely autobiographical), 1871, and an additional lecture on 'The Mystery of Life' ('the most perfect of his essays'—Sir Leslie Stephen, *National Rev.* April 1900), sixth edition, 1900; the same contents in cheaper form, 48th thousand, 1900; (d) original edition with a distinct preface, 1882; 50th thousand, 1900. More than 110,000 copyright copies of 'Sesame' have been issued. 23. 'The Ethics of the Dust', 1866, crown 8vo; second edition, with new preface, 1877 (exceeding 21,000 copies). 24. 'The Crown of Wild Olive: three Lectures on Work, Traffic, and War', 1866, foolscap 8vo (two other editions in this form). With an additional lecture on 'The Future of England', and an appendix on 'Prussia', 'Works', vol. vi.; of a small copyright edition of the same some 40,000 have been sold. 25. 'Time and Tide by Weare and Tyne', 1867, foolscap 8vo ('Works', vol. ii. 1872); small edition, 1886 (now exceeding its 14th thousand). 26. 'The Queen of the Air', 1869, crown 8vo ('Works', vol. ix. 1874); small edition, 1887 (now exceeding its 15th thousand). 27. 'Lectures on Art delivered

before the University of Oxford, 1870, 8vo (two other editions in this form); small edition, with new preface, 1887 (sale exceeding 13,000). Several catalogues of the collections in the Ruskin Drawing School, referred to in the 'Lectures,' were issued, 1870-3. 28. 'Fors Clavigera' (illustrated), 1871-84, 8vo. Ninety-six 'Lettres to the Workmen and Labourers of Great Britain,' originally issued as separate publications, subsequently collected into 8 vols. (8vo) and 4 vols. (crown 8vo). The first and second thousands of Letter lvii. are of interest to collectors as containing 'an attack on Mr. Gladstone written under a complete misconception of his character.' This was afterwards omitted and a blank space left 'in due memorial of rash judgment.' Several reports and papers referring to St. George's Guild were separately published. A 'Letter to Young Girls,' reprinted with additions from 'Fors,' was published in 1876, and has exceeded its 72nd thousand. 29. 'Munera Pulveris,' 1872, being vol. ii. of the 'Works,' small edition, 1880 (exceeding 8,000 copies). 'Gold: a Dialogue connected with the subject of "Munera Pulveris,"' written in 1863, in reply to an article by Professor Cairnes, and intended for 'Fraser's Magazine,' was first printed (for private circulation) in 1891. 30. 'Aratra Pontolici: Six Lectures on the Elements of Sculpture' (illustrated), 1872, being vol. iii. of the 'Works.' The seventh lecture of this course, 'The Relation between Michael Angelo and Tintoret,' was published separately and ran through three editions; small edition of the seven lectures, 1890. 31. 'The Eagle's Nest: Ten Lectures on the Relation of Natural Science to Art,' 1872 (vol. iv. of the 'Works'); small edition, 1887 (sale exceeding 12,000). 32. 'Love's Meinie: Lectures on Greek and English Birds,' 1881, vol. i. 8vo (originally issued in three separate parts, 1873-81); small edition, 1897. The work was never completed. 33. 'Ariadne Florentina: Six Lectures on Wood and Metal Engraving' (illustrated); originally issued in seven separate parts (1878-6); collected into a volume (vii. of the 'Works'), 1876; small edition, 1890. 34. 'Val d'Arno: Ten Lectures on the Tuscan Art directly antecedent to the Florentine Year of Victories' (illustrated), 1874 ('Works,' vol. viii.); small edition, 1890. 35. 'Mornings in Florence,' issued in six separate parts, 1875-7, crown 8vo; collected into a volume 1889 (sale exceeding 11,000). 36. 'Proserpina: Studies of Wayside Flowers while the Air was yet pure among the Alps and in the Scotland and England which my Father knew' (illustrated); issued in ten

separate parts, 1875-86, 8vo; parts i-vi. collected into vol. i. 1879. 37. 'Deucalion: Collected Studies of the Lapse of Waves and Life of Stones' (illustrated); issued in eight separate parts, 1875-83; parts i-vi. collected into vol. i. 1879. 38. 'Bibliotheca Pastorum,' 8vo: vol. i., 'The Economist of Xenophon,' with essay by Ruskin, 1876; vol. ii., 'Rock Honeycomb: Broken Pieces of Sir Philip Sidney's Psalter laid up in store for English Homes,' with preface and commentary by Ruskin, 1877; vol. iii. (not issued); vol. iv., 'A Knight's Faith: Passages in the Life of Sir Herbert Edwardes,' collated by Ruskin, 1886. 39. 'Guide to the Principal Pictures at the Academy of Fine Arts, Venice,' issued in two parts, 1877, 8vo; revised and corrected edition in one volume, 1891. 40. 'St. Mark's Rest: the History of Venice, written for the help of the few Travellers who still care for her Monuments,' issued in six separate parts, 1877-84, crown 8vo; collected into one volume, 1884. 41. 'The Laws of Fésolé: a familiar Treatise on the Elementary Principles and Practice of Drawing and Painting' (illustrated), issued in four separate parts, 1877-8, 8vo; collected into vol. i. 1879. No more was issued. 42. 'Notes by Mr. Ruskin on his Drawings by Turner exhibited at the Fine Art Society's Galleries, March 1878,' twelve editions (8vo) were issued in rapid succession, also an illustrated edition, 4to. In 1900, when the drawings were again exhibited after Ruskin's death, the 'Notes' were reprinted. 43. 'Notes by Mr. Ruskin on Samuel Prout and William Hunt, illustrated by a Loan Collection of Drawings exhibited at the Fine Art Society's Galleries, 1879-80,' 8vo; also an illustrated edition, 4to. 44. 'Lettres to the Clergy on the Lord's Prayer and the Church,' 1879, crown 8vo. 45. 'Arrows of the Chase,' 1880, 2 vols. 8vo; a collection of letters published chiefly in the newspapers, 1840-80. 46. 'Our Fathers have told us: Sketches of the History of Christendom for Boys and Girls who have been held at its Fountains. Part i. The Bible of Amiens' (illustrated), issued in five separate parts, 1880-5, 8vo; collected into a volume, 1884. A separate 'Traveller's edition' of chap. iv. crown 8vo was issued in 1881 to serve as a guide to the cathedral. 47. 'The Art of England: Lectures given in Oxford,' 1884, small 4to. 48. 'The Pleasures of England: Lectures given in Oxford,' 1884, small 4to, issued in four separate parts; not completed or separately collected; small edition of the four parts in one volume together with 47 (sale

exceeding 9,000). 49. 'The Storm Cloud of the Nineteenth Century: Two Lectures delivered in the London Institution,' 1884, small 4to. 50. 'On the Old Road,' 1885, 3 vols. 8vo; a collection of miscellaneous essays, pamphlets, &c., written 1884-85. 51. 'Præterita,' originally issued in twenty-eight separate parts, 1885-9, 8vo; the first twenty-four parts collected into vols. i. and ii. 1896-7; vol. iii., issued in 1900, consists of the remaining four parts, and of three parts of 'Dilecta' (correspondence, &c., illustrating 'Præterita'). 52. 'Hortus Inclusus,' 1887, small 8vo; letters from Ruskin to the Misses Mary and Susie Beaver. 53. 'Three Letters (by Ruskin) and an Essay, 1896-41, found in his Tutor's Desk' (Rev. T. Dale), 1898, crown 8vo. 54. 'Verona and other Lectures' (illustrated), 1894, medium 8vo. 55. 'Letters addressed to a College Friend during the Years 1840-5,' 1894, crown 8vo. 56. 'Lectures on Landscape delivered at Oxford in Lent Term, 1871' (illustrated), 1897, folio. In addition to Ruskin's published writings he had at various times collected materials for many other works. A few chapters, found completed among his manuscripts, are likely to be included in a forthcoming collected edition of his works. Of late years Ruskin's writings have attracted some attention on the continent. Accounts or translations of some of them have appeared in French, German, Italian, Dutch. The most important of the foreign Ruskiniana is 'Ruskin et la Religion de la Beauté,' by Robert de la Sizeranne (Paris, 1897; English translation, 1899).

[The fullest authority for Ruskin's early life is *Præterita*. For his middle life it is less complete, and ends in 1860. Most of his other writings, and especially *Fors Clavigera*, are to some extent autobiographical. The *Life and Work of John Ruskin*, 2 vols. 1893, and *The Life of John Ruskin*, 1900, are by W. G. Collingwood, who, as a pupil at Oxford, and afterwards as a literary assistant and neighbour, knew him well. The *Life of 1900* contains letters by Ruskin and his parents not before published. The fullest collection of his letters is in Cook and Wedderburn's collective edition of his works, 1903-9 (vols. 36-7). Prof. O. B. Norton's prefaces to the American 'Brantwood' edition of Ruskin's Works have valuable biographical matter. Several volumes of Ruskin's letters have been privately printed in Mr. T. J. Wise's Ashley Library. A large number of letters (not included in *Arrows of the Chase*) is given in *Ruskiniana* (privately printed, 1890). Another collection of letters appeared in the *New Review*, March 1892. See also Rogers and his Contemporaries, 1889; *The Letters of James Smetham*, 1891; *The Life and the Friendships of Mary*

RUSSELL, CHARLES, BARON RUSSELL OF KILLOWEN (1832-1900), lord chief justice of England, was born at Newry on 10 Nov. 1832. He was the elder son of Arthur Russell (1785-1845) and Margaret, daughter of Matthew Mullin and widow of John Hamill, a merchant of Belfast. The Russells were of an old stock long settled in the county of Down. The family had clung to the ancient faith, and, like others, had suffered from the persecutions of the seventeenth and eighteenth centuries. Arthur Russell died in 1845, and the care of his young family devolved upon their clever mother and their paternal uncle, Dr. Charles William Russell [q.v.], then a professor at and afterwards president of Maynooth College. The school days of Charles Russell are described in the petition for his articles, presented to the Incorporated Law Society of Ireland in 1848. He was for a short time at a diocesan seminary at Belfast, then for two years at a private school in Newry, finally for one year at St. Vincent's College, Castleknock. The records of his school career are scanty. They show that he was a hard-working boy, of more than average attainments, but there is nothing to indicate that he displayed any brilliant qualities. In January 1849 he commenced his career with Cornelius Denvir, a solicitor at Newry, who died in 1853, and his articles were transferred to Alexander O'Rourke of Belfast. He was admitted a solicitor in January 1854. For six months he took charge of an office of O'Rourke's in Londonderry. He then returned to Belfast, and practised on his own account in the county courts of Down and Antrim. About that time injudicious attempts by protestants to proselytise had led to riots, and when the reckoning came before the magistrates Russell was the catholic champion. His speeches were reported in the 'Ulsterman' newspaper, and were as able as many he afterwards delivered when at the bar. On one occasion when he had done well his admirers carried him on their shoulders to his hotel, and he had difficulty in preventing the celebration of his triumph by another riot. His success,

and the advice of those among whom he practised, confirmed his resolve to become a barrister in London.

On 6 Nov. 1856 he entered at Lincoln's Inn. Before doing so he had matriculated at Trinity College, Dublin, but did not graduate. From that time he resided in London. In 1857 Henry Bagshawe, then a junior in large practice at the equity bar, and now a county court judge, invited him to become a pupil.

While in these chambers he is described as being grave, reserved, and hard-working. He acquired a considerable knowledge of real property law, but conveyancing and equity drafting did not interest him, and he left to join the common law bar. The Inns of Court had recently appointed five readers to teach law. Russell attended the lectures of Henry Maine in 'Roman Law and Jurisprudence,' of Phillimore in 'Constitutional Law,' Broom on the 'Common Law,' and Birkbeck on 'Equity.' By close private study and with the guidance of those distinguished teachers he qualified himself for practice. He never attended the chambers of a pleader. The common law procedure acts had struck a blow at technicalities which that class of practitioner did not long survive. He found time to write for newspapers and magazines, and contributed a weekly letter on current politics to the Dublin 'Nation.' In Trinity term 1858 he presented himself for examination for the studentship founded by the Inns of Court. Though unsuccessful he was awarded a certificate of honour. On 10 Aug. 1858 he was married to Ellen, eldest daughter of Joseph Stevenson Mulholland, M.D., of Belfast.

In Hilary term 1859 he again competed for the studentship, which was awarded to Mr. Montague Cookson, afterwards Ormston, K.C. On 26 Jan. in that year he was called to the bar and joined the northern circuit. He practised in the assize court, Liverpool, and from the first was successful. His few books show that in the third year from his call he made over 800*l.*, and in his fourth year over 1,000*l.*

He soon began to be known in London, and argued a case before Lord Westbury with so much ability as to procure for him the offer of a county court judgeship.

In 1872 he took silk at the same time as Farrer, afterwards Baron Herschell [q. v. Suppl.] They speedily divided between them the mercantile business of the circuit. In commercial cases, where rights mainly depended on written evidence, Russell's knowledge of business and of the law enabled him

to go straight to the point and get through a long list with great smoothness and rapidity. But where there was a conflict of evidence, his style of advocacy was open to criticism and complaint. He was not a pleasant antagonist. Occasionally his opponents were made to feel a personal pressure fatal to the harmony which is a tradition of the bar. Always desperately in earnest and determined to win, he was neglectful of the small amenities which soften professional contests. He dealt with witnesses who gave their testimony in good faith with consideration, and confined his cross-examination in such cases to its legitimate purpose, viz. to glean from the witnesses such admissions as helped to reconcile their statements with his client's case. But his quick temper sometimes betrayed him into attack, and any interference for the protection of the witness was hotly resented. He had, however, great self-control, and was able, by an effort which was visible, to break off an angry discussion and proceed with the case as if nothing had happened. Opposing counsel were often sorely ruffled, but his manifest honesty of purpose secured him indulgence. He made no enemies. As years went by his methods were less aggressive, and old grievances were condoned or forgotten by the bar and the profession. On his circuit he was popular, and was ever ready with a kindly word and a helping hand for a deserving junior.

The power that made him the greatest advocate of his time was best displayed when fraud or perfidy or malice had to be exposed. It has been said that the finest actors off the stage are members of the bar. This was not true of Russell. He felt the indignation and contempt which he poured upon the witness. His searching questions flashed in rapid succession; his vehemence of manner and his determination to force out the truth secured him a complete mastery of the dishonest witness. His extraordinary power when addressing a jury was owing not so much to any oratorical display as to the authority which he could always exercise over those he sought to influence. Spellbound under his vigorous and often passionate reasoning, their verdict was often due to the merits not of the litigant but of his counsel.

In a difficult case he prepared himself most laboriously, and the junior or solicitor who failed to supply him with the information he desired felt his heavy hand. He was often as impetuous in consultation as he was in court.

In 1875 he was invited to stand for Durham; but, finding that his religion might be

a difficulty in his way, he withdrew; and Parnell, afterwards Lord Herschell, who upon his advice was accepted as the liberal candidate, was returned.

In 1876, on the death of Percival A. Pickering, Q.C., he applied with other leaders of the encait for the vacant judgeship of the court of passage at Liverpool. The appointment was given to Mr. T. Henry Baylis, Q.C., a distinguished lawyer, in whose chambers the home secretary (now Viscount Cross) had been a pupil. The office would not have interfered with private practice. In 1880, after two unsuccessful attempts, he was returned to parliament for Dundalk. He stood as an independent liberal, and was opposed by home-rulers and Parnellites. He had been given to understand that he might expect personal violence, and an attempt was made to assault him; but he gave such convincing proof of his courage and ability to defend himself that he was not further molested. When he entered parliament the national cause was represented in the House of Commons by a small minority of the Irish members. It was not till the franchise was lowered by the act of 1884, and as many as eighty-five members were returned from Ireland to support the demand for an Irish parliament, that he pledged himself, together with the majority of liberals, to the policy of home rule. But he was always a firm supporter of the Irish cause; and before the alliance between Gladstone and Parnell he spoke constantly in Irish debate and voted usually with the national party. In February 1881 he opposed the coercion bill. W. E. Forster had stated that the measure was aimed at 'village blackguards.' Russell retorted with some effect that among them might be found some 'village Hampdens.' The prediction was verified in the following year when 'the suspects' were released from prison. Many of them were men of good repute, and the title 'ex-suspect' became in Ireland one of distinction.

In March 1882 he opposed the proposal for an inquiry into the working of the Land Act, and in the following April he supported the government in their change of policy which led to the release of Forster's prisoners. He resisted strongly the measure of coercion which followed upon the Phoenix Park murders, and after a brief truce renewed the warfare between the government and the Irish members. He sought by various amendments to mitigate the severity of the government proposals. In 1883 he delivered a long speech in the debate on the address, complaining that the

legitimate demands for the redress of Irish grievances were disregarded; and in 1884 he spoke in support of an inquiry into the Mamtrasna trials. He took little part in debates not connected with Ireland. In 1883 he spoke in favour of a bill for creating a court of criminal appeal, contending that the interference of the home secretary with the sentences of judges was unconstitutional; and during the same parliament he supported the granting of state aid to voluntary schools.

His opinions throughout these anxious times were wisely measured by what he considered practicable. On Irish questions he did not hesitate to differ from the government; but the views he expressed were temperate and conciliatory. His parliamentary speeches between 1880 and 1885 did not add to his great reputation. The time was not propitious. The House of Commons was exasperated by the obstruction which Parnell was conducting with so much skill, and lent an unwilling ear to discourses on the well-worn topics that crime would be prevented by proper remedial measures, and that Ireland must be governed according to Irish ideas. In 1882 he was offered a judgeship. He was tempted to accept it, for he could not hope to retain an Irish seat. But he declined the offer, and determined to look for an English constituency. In 1885 he was returned for South Hackney, and was appointed attorney-general in Gladstone's government of 1886. His re-election upon taking office was opposed by the conservatives, but he was again returned. He threw himself with extraordinary energy into the home rule struggle. The alliance between liberals and Parnellites enabled him to give full play to his enthusiasm, and he travelled all over England addressing public meetings, great and small, in every part of the country. He seemed unconscious of what such exertions mean to most men in point of fatigue and weariness, and was content to forego the gratification, so essential to most politicians, of elaborate notices in the daily press. His speeches in the House of Commons on the home rule bill were probably his best parliamentary performances. In supporting the second reading he referred to 'the so-called loyal minority' as not being an aid but a hindrance to any solid union between England and Ireland. 'Their loyalty,' he said, 'had a close relation to their own status and their own interest.' At the general election of 1886 he was again returned for South Hackney, defeating his opponent, Mr. O. J. Darling (afterwards a

judge of the high court), by a small majority. In 1887 he resisted the passing of the coercion bill of that year in a speech of considerable power.

In 1888 the Parnell Commission Act was passed. Its object was declared to be to create a tribunal to inquire into charges and allegations made against certain members of parliament and other persons by the defendants in the recent trial of an action of *O'Donnell v. Walter* and another. Three of the judges were appointed commissioners, and the sittings began on 22 Oct. Russell appeared as leading counsel for Parnell, and the attorney-general, Sir R. Webster (now Lord Alvorstone and lord chief justice) was on the other side.

The cross-examination of many of the Irish witnesses called by the attorney-general devolved upon Russell, and was conducted under great difficulty and with great success. He had no notice of the order in which they would appear, and had little information about them. Yet it was said that few witnesses left the box without being successfully attacked and disparaged. His famous speech for the defence occupied six days, and was concluded on 12 April 1889. It was well suited to the occasion and to the tribunal, and was undoubtedly his greatest forensic effort. The delivery was so slow and so deliberate as to divest the speech of all oratorical character. It began with an account of the land legislation in Ireland of much historical value. His comments upon the witnesses were in his best form, and his criticism upon the conduct of those who had been imposed upon by Richard Pigott [q. v.] were strikingly keen and sagacious. The touching words with which he closed his speech are classic. They were spoken with an emotion which in court he had never shown before.

In 1889 he defended Mrs. Maybrick on the charge of poisoning her husband. The case excited extreme interest, and Russell felt very deeply his failure to save her from a capital conviction.

In 1890 he spoke in the debate in the House of Commons on the report of the special commission. His speech was described in the 'Times' as being that of an advocate, but 'a very able speech in which argument, invective, cajolery, and eloquent appeals to prejudice or sentiment were blended with practised skill.'

In 1892, on the return of Gladstone to power, he was again appointed attorney-general, and was once more returned for Hackney by a large majority. In 1893, together with Sir R. Webster, he repre-

sented Great Britain in the Behring Sea arbitration. The points in controversy were these. The United States, by an alleged purchase from Russia in 1867, set up as matter of title an exclusive jurisdiction over the sealing industry in the Behring Sea. This was denied by Great Britain. Independently of this title the United States claimed to be the lawful protectors of the seals bred in the islands of the Behring Sea, as trustees for all nations. In support of this contention a novel legal doctrine was advanced by Mr. Carter, one of the counsel for the United States, and was supported by an address of great length and ingenuity. The arbitrators were invited to apply to the question of pelagic sealing what were called 'principles of right,' viz., those rules upon which civilised nations ought to be agreed. This, it was said, was international law. This contention was combated with vigour, and necessarily with great labour, by Russell and Sir R. Webster, the former speaking for eleven and the latter for five days. They contended that international law consisted of the rules which civilised nations had agreed to treat as binding. These rules were not to be ascertained by reference to 'principles of right,' but were to be found in the records of international transactions. It was argued that, apart from actual consent, so ascertained, there was no universal moral standard. The award on these points was in favour of Great Britain. The discussion as to the future regulations for the management of the sealing industry occupied eight days. Russell's services were acknowledged by the conferring upon him of the grand cross of St. Michael and St. George.

In May 1894 he succeeded Charles Syngs Christopher, lord Bowen [q. v. Suppl.] as lord of appeal, and was raised to the peerage for life by the title of Russell of Killowen. In June of the same year, on the death of John Duke, lord Coleridge [q. v. Suppl.], he was appointed lord chief justice, and entered upon that part of his career in which he earned the reputation by which he will be best remembered. As chief justice he was as masterful as ever, but he was patient, courteous, and dignified. In his knowledge of the law and in those qualities requisite for the discharge of his great duties, he was the superior of many of his illustrious predecessors. No judge gained more speedily and enjoyed more fully the confidence and goodwill of the public.

Outside the range of his judicial duties there were subjects in which he took a deep interest.

In 1895 he supported the judges of his

division in the endeavour to establish the court for the trial of commercial causes, a project which for many years had been met by the strenuous and successful opposition of Lord Coleridge. In the same year he delivered an address in Lincoln's Inn Hall on legal education. He dwelt at length on the failure of the existing system, and insisted that no student should be admitted to the degree of barrister who had not given proof of his professional competency. He bestowed faint praise on the council of legal education, and urged that there should be a charter of a school of law with a senate not wholly composed of benchers and lawyers. His comments were resented and entirely disregarded. It was said the public did not demand any change in the existing system. The degree of barrister no more implied a knowledge of the law than the degree of the universities was a guarantee of scholarship. The old formula was repeated, that the best lawyer is self-taught. It was pointed out that prior to his call the chief justice himself obtained his knowledge of the law with the help of the readers of the Inns of Court—an excellent argument for the existing system if all law students were as able as Russell. The benchers were firm; he was *vox clamantis* as Westbury and Selbourn had been before him.

The years following were occupied by his ordinary judicial duties; the trial of the Jameson raiders in 1896 was the principal event; the law was laid down by Russell with great clearness and firmness, and the defendants were convicted.

In 1896 he visited the United States for the purpose of delivering an address to American lawyers assembled at Saratoga. He chose for his subject 'Arbitration: its Origin, History, and Prospects.' He adhered to the view that he had laid before the Behring Sea arbitrators—that international law was neither more nor less than what civilised nations have agreed shall be binding on one another. Amid great applause he expressed hopes for the peaceful settlement of disputes between nations.

In 1899, on the death of Farrer, lord Herschell, he was appointed in his place to act as one of the arbitrators to determine the boundaries of British Guiana and Venezuela under the treaty of 2 Feb. 1897. The arbitration was held in Paris, Great Britain being represented by Sir R. Webster and Sir R. Roid, and Venezuela by American counsel. Though he took little part in the discussion, he displayed in the conduct of the inquiry his old power of seizing upon and directing attention to the vital points,

and of rescuing the argument from details which only obscured the real issues. The award was in favour of Great Britain, and was remarkable for the fact that it was arrived at unanimously.

In July 1900 he left town for the North Wales circuit. At Chester he was attacked by alarming symptoms of illness, and was advised to come home. In a few days it became clear that there was grave internal mischief. After an attempt to relieve him by an operation he died on 10 Aug. at 2 Cromwell Houses, Kensington. He was buried at Epsom on the 14th. He was survived by his widow and five sons and four daughters.

In Russell were of character and temper found apart. He was northern and southern intellect and much sensibility and was a man of business. Under a manner often lay concealed great attention for others.

His amusements were few. He did not find relief in indolence.

acquired by a vigorous cross-examination of a secretary or member of committee which was only completed just before he rose to speak.

He had a strong view of his obligation to enforce the duty of honesty and good faith in commercial transactions. His protests from the bench against fraud in the promotion of companies and the practice of receiving commissions were offered courageously, and his sanguine disposition led him to believe that good results would follow. The secret commissions bill which he introduced in the House of Lords in 1900 cost him infinite labour, the collection of the necessary materials involving him in a personal correspondence with public bodies and individuals all over the kingdom.

He published the following works: 'New Views of Ireland, or Irish Land: grievances: remedies' (reprinted from the 'Daily Telegraph'), London, 1880, 8vo; 'The Christian Schools of England and recent Legislation concerning them,' London, 1883, 8vo; an article on Lord Coleridge, C.J., in the 'North American Review' in 1894; an article on the legal profession in the 'Strand Magazine' in 1896; 'Address on Legal Education,' London, 1896, 8vo; 'Arbitration: its Origin, History, and Prospects; an Address to the Saratoga Congress, London, 1896.

The income that he made at the bar was very great. His fee-book shows that from 1862 to 1872 he made as junior on an average 3,000*l.* a year. He took silk in 1872, and for the following ten years he made at the rate of 10,000*l.* a year. From 1882 to 1892 his annual earnings averaged nearly 16,000*l.*, and from 1893, when he was again appointed attorney-general, till he became a lord of appeal in April 1894, he received 82,828*l.*

The honorary degrees of LL.D. was conferred upon him by Trinity College, Dublin, in 1894, by the Laval University, Canada, by Edinburgh University in 1896, and by the university of Cambridge in 1897. The best likeness of him is the portrait by Mr. J. S. Sargent, R.A., now in the possession of the family, a replica of which it is proposed to place in the National Portrait Gallery.

[R. Barry O'Brien's *Life*, 1901; personal knowledge; *Times*, 11 Aug. 1900; *Burke's Peerage*, 1900; G. E. Cokayne's *Complete Peerage*; *Foster's Men at the Bar*; *Lincoln's Inn Reg.*; *Law List*, various years.] J. O. M.

RUSSELL, HENRY (1812-1900), vocalist and song composer, was born at Sheerness, where his father held a government appointment, on 24 Dec. 1812. He made

his first appearance on the stage at the age of three, in connection with a travelling theatrical company. At the age of six he began to study the pianoforte, but for a time he was a boy in a chemist's shop in Seven Dials. Russell appeared as a vocalist in 1828 at the Surrey Theatre, under Elliston's management, at a weekly salary of 30*s.*, when he sang the 'Pilgrim of Love' and similar popular ditties. In his teens he went to Italy, first becoming an outdoor student of the Bologna conservatoire, subsequently studying under Rossini at Naples, and meeting Balfe, Bellini, Donizetti, and other musical celebrities. Upon his return to England he was for a short time chorus master at Her Majesty's Theatres.

In order to find a remunerative field of work Russell went to Canada, where he started his one-man entertainments that made him famous. For a short time he was organist of the Presbyterian church, Rochester (N. Y.). From 1833 to 1841 he travelled incessantly in Canada and America, singing his songs, 'Ocher, boys, cheer,' 'There's a good time coming, boys,' 'A Life on the Ocean Wave,' 'O Woodman, spare that Tree,' and many others with extraordinary success. In 1841 he returned to England, and, in giving his entertainments in London and the provinces, repeated in his native country the triumphs which had attended him in the American continent. He subsequently, with Dr. Charles Mackay [q.v.], ran an entertainment entitled 'The Far West, or the Emigrant's Progress from the Old World to the New,' with scenery painted by Mills. This, in addition to being remarkably successful, had a distinct influence upon emigration to the far west. About 1865 Russell retired from public life. He died at 18 Howley Place, Maida Vale, on 8 Dec. 1900, and his remains are interred in Kensal Green cemetery.

Russell composed about eight hundred songs, of which not a few of the verses were written expressly for him by his old friend, Dr. Charles Mackay, other authors drawn upon being Longfellow, Eliza Cook, Charles Dickens, and other homely poets. Their themes were of so essentially domestic and popular a nature that they at once caught the fancy of the public. Not a little of the success, however, which attended them was due to their composer's remarkable enunciation of the words in the singing of his songs, combined with a dramatic intensity which thrilled his hearers. This feature of his entertainments was suggested to him when listening to the orations of Henry Clay, the great Kentucky orator. 'There is no

reason why I should not apply his methods to my singing of songs,' said Russell: the success of the experiment was unprecedented.

In addition to the large number of detached songs already referred to, Russell composed (1) a series of songs from Scott's 'Lady of the Lake'; (2) Scripture melodies; (3) dramatic scenes; (4) cantatas, &c., with a memoir, London, 1846; (5) two vols. of copyright songs, 1860; (6) 'L'Amico dei Cantanti' ('The Singer's Friend, a Treatise on the Art of Singing'), 1830, dedicated to Princess (afterwards Queen) Victoria. In 1889 the admiralty authorised the use of his melody, 'A Life on the Ocean Wave,' as the regimental march of the royal marines, and on 12 Oct. 1891 Sir Augustus Harris [q. v. Suppl.] organised a Henry Russell night at Covent Garden Theatre, when the veteran composer was present and made a speech. In 1895 Russell published a book of gossip reminiscences, entitled 'Cheer, boys, cheer,' named after his most popular song.

[Russell's 'Cheer, boys, cheer,' 1895; James D. Brown and S. S. Stratton's *British Musical Biography*; *Brit. Mus. Cat.*; *Musical Times*, January 1901, p. 27.] F. G. E.

RUTHERFORD, WILLIAM (1830-1899), physiologist, the seventh and youngest son of Thomas Rutherford, a gentleman farmer, was born at Ancrum Craig in Roxburghshire on 20 April 1839, and was educated in the district grammar school. He then entered the university of Edinburgh, where he graduated M.D. in 1863, taking a gold medal for his thesis. He acted as house-physician at the Royal Infirmary to Daniel Rutherford Haileane (1824-1887) [q. v.], and as house-surgeon to James Spence [q. v.]. For a year he was assistant demonstrator of anatomy at Surgeons' Hall under (Sir) John Struthers [q. v. Suppl.], after which he went abroad to perfect his knowledge of experimental physiology. He spent the winter of 1864-5 in Berlin, working under Professor Du Bois-Reymond, to gain a special insight into electrical physiology. Thence he passed to Dresden, Prague, Vienna, Leipzig, where he worked with Professor Ludwig, and Paris. In 1866 he returned to Edinburgh, and was appointed assistant to John Hughes Bennett (1812-1875) [q. v.], then professor of the institutes of medicine in the university of Edinburgh. Rutherford was much influenced by the perfect lucidity which was his master's chief characteristic. But he added to it the labour of research and preparation, so that his four years' assistantship established his reputation as a practical teacher, and, combined with his original

investigations, procured for him the post of professor of physiology in King's College, London, to which he was appointed in 1869. He threw himself with ardour into the duties of the chair. His lectures were illustrated by the most admirable diagrams and by the performance of precise and delicate experiments, whose preparation often cost him hours of preliminary work. Above all, his students were made to prepare microscopical sections for themselves, and to carry out the easier manipulations in connection with physiological chemistry and experimental physiology. In 1871 Rutherford filled the office of Fullerian professor of physiology at the Royal Institution of London, and in 1874 he returned to Edinburgh as professor of physiology, a post he held until his death. He died unmarried on 21 Feb. 1899, and is buried at Ancrum. A marble bust, said to be an excellent likeness, by John Hutchinson, R.S.A., stands in the physiology class room at the university of Edinburgh. It was unveiled by Sir William Muir, principal of the university, on 8 July 1899.

The science of histology owes much to Rutherford; he was one of the first teachers in this country to deviate from the old methods of instruction, and to introduce the improvements which had been found most serviceable in foreign laboratories. He modified a microtome, invented by A. B. Stirling, adding to it a freezing chamber; the apparatus rapidly came into extensive use, and proved of great service in the study both of histology and pathology. As a physiologist he was interested in the recondite problems of electro-physiology, and in the physiological action of drugs on the secretion of the bile, and later in life he devoted much time to investigate the structure of striated muscle and the mechanism of the senses.

Rutherford devoted much valuable time, which might have been spent in original research, to perfecting his lectures on physiology, and to rendering them in the highest degree useful and acceptable to his class. This care and minute attention to detail rendered him one of the most successful as well as one of the most brilliant lecturers who have held a professorial chair in the university of Edinburgh. Yet Rutherford was shy, almost to timidity, and he was full of mannerisms and extremely sensitive to criticism. He was a good musician, with a fine baritone voice, and for some time he acted as secretary of the University of Edinburgh Musical Society.

Rutherford's works are: 1. 'Notes of a Course of Practical Histology for Medical

Students, given in King's College, London,' London, 1872, 8vo. 2. 'Introductory Lecture to the Course of Institutes of Medicine (Physiology) in the University of Edinburgh,' Edinburgh, 1874, 8vo. 3. 'Outlines of Practical Histology,' London, 1875, royal 8vo; 2nd edit. London, 1876. 4. 'An Experimental Research on the Physiological Actions of Drugs on the Secretion of Bile,' Edinburgh, 1880, 8vo. 5. 'A Text Book of Physiology,' Edinburgh, 1880, 8vo. He was also co-editor of the 'Journal of Anatomy and Physiology,' Cambridge and London, 1875-6, and of the 'Journal of Physiology,' London and Cambridge, 1878.

[Personal knowledge; British Medical Journal, 1890, i. 564; private information.] D'A. P.

RYDER, DUDLEY FRANCIS STUART, third EARL OF HARROWBY (1831-1900), second son and eventual heir of Dudley Ryder, second earl of Harrowby [q. v.], by Lady Frances Stuart, fourth daughter of John, first marquis of Bute, was born at Brighton on 16 Jan. 1831. He was educated at Harrow and the university of Oxford, where he matriculated from Christ Church on 31 May 1840, graduated B.A. in 1853, and proceeded M.A. in 1878. On leaving the university, Viscount Sandon, as he was styled during his father's lifetime, made a tour in the East with Lord Carnarvon, visiting Syria and the Lebanon (see CARNARVON'S *Recollections of the Druzes of the Lebanon*, London, 1860, 8vo). On his return to England he did garrison duty as captain in the 2nd Staffordshire militia regiment during the Crimean war and Indian mutiny. He entered parliament in 1866, being returned (30 May) for Lichfield as a supporter of Lord Palmerston, and gained experience of affairs as private secretary to Henry Labouchere (afterwards Lord Taunton) [q. v.] at the colonial office. Defeated at Stafford at a bye-election in Aug. 1860, he remained without a seat until 1868, when he was returned (19 Nov.) as third member for Liverpool, which constituency he continued to represent until his accession to the peerage on the death of his father (10 Nov. 1882). He was a member of the select committees on the Hudson's Bay Company (1857) and the Euphrates Valley (1871-2), and continued throughout life to devote much time and attention to the study of imperial and colonial questions. It is, however, by his labours on the cause of national education that he is most likely to be remembered. To W. E. Forster's measure he gave from the first a hearty support. He was a member of the first London school board, and took an active part in its work both as chairman of the

statistical committee and as a firm though moderate supporter of voluntary schools and religious instruction. On the return of his party to power in 1874 he was sworn (2 March) of the privy council, and appointed vice-president of the committee of council on education. In his official capacity he was largely responsible for the Education Act of 1876 and the revised codes. On 4 April 1878 he was transferred to the presidency of the board of trade, which he retained with a seat in the cabinet until the fall of the administration (April 1880). He was lord privy seal in Lord Salisbury's short administration (June 1885-February 1886), and served on the royal commission appointed on 15 Jan. 1886 to inquire into the working of the Education Acts. An earnest though moderate churchman, he was credited with a voice in the distribution of ecclesiastical patronage during the Beaconsfield administration, and in 1886 became president of the British and Foreign Bible Society, and representative for the diocese of Lichfield in the laymen's house of convocation. He was elected member and chairman of the Staffordshire county council in 1888. His health was hardly equal to the strain of public life, and in his later years he was almost a chronic invalid. He died at Sandon Hall, Staffordshire, on 26 March 1900, leaving no issue by his wife, Lady Mary Frances Cecil (married 5 Oct. 1861), eldest daughter of Brownlow, second marquis of Exeter. He was succeeded in title and estate by his only brother, Henry Dudley, fourth earl of Harrowby, who died at Algiers on 11 Dec. 1900 (*Times*, 13 Dec.)

RYLE, JOHN CHARLES (1816-1900), bishop of Liverpool, eldest son of John Ryle, private banker, of Park House, Macclesfield, M.P. for Macclesfield 1833-7, by Susanna, daughter of Charles Hurt of Winksworth, Derbyshire, was born at Macclesfield on 10 May 1816. He was educated at Eton and the university of Oxford, where his career was unusually distinguished. He was Fell exhibitor at Christ Church, from which foundation he matriculated on 15 May 1834.

He was Craven scholar in 1836, graduated B.A. in 1838, having been placed in the first class in *literæ humaniores* in the preceding year, and proceeded M.A. in 1871. He was created D.D. by diploma on 4 May 1880. Ryle left the university with the intention of standing for parliament on the first opportunity, but was deprived of the means of gratifying his ambition by his father's bankruptcy. He accordingly took holy orders (1841-2) and a cure of souls at Exbury, Hampshire. In 1843 he was preferred to the rectory of St. Thomas, Winchester, which he exchanged in the following year for that of Helmingham, Suffolk. The latter living he retained until 1861, when he resigned it for the vicarage of Stradbroke in the same county. The restoration of Stradbroke church was due to his initiative. In 1869 he was made rural dean of Hoxne, and in 1872 honorary canon of Norwich. He was select preacher at Cambridge in 1873 and the following year, and at Oxford from 1874 to 1876, and in 1879 and the following year. In 1880 he was designated dean of Salisbury, and at once (19 April) advanced to the newly created see of Liverpool, which he ably administered until his resignation on 1 March 1900. He died on 10 June 1900.

He married thrice: first, on 29 Oct. 1845, Matilda Charlotte Louisa, daughter of John Pemberton Plumtre, of Fredville, Kent; secondly, in March 1860, Jeese, daughter of John Walker of Crawfordton, Dumfriesshire; thirdly, on 24 Oct. 1861, Henrietta, daughter of Lieutenant-colonel William Leigh Clowes of Broughton Old Hall, Lancashire. He had issue a daughter by his first wife, and three sons by his second wife, of whom Herbert became bishop of Winchester.

Ryle belonged to the evangelical school,

of which he was one of the strongest and not the least liberal supporters. He possessed an unusual command of pure and nervous English, and was a prolific author of tracts, of which some have been translated into foreign languages. His charges, and not a few of his sermons, are also in print. His most important works are: 1. 'The Bishop, the Pastor, and the Preacher, in three Biographical Lectures' (on Latimer, Baxter, and Whitefield), Ipswich, 1851, 8vo; reprinted, with additions, as 'The Priest, the Puritan, and the Preacher', New York, 1860. 2. 'Hymns for the Church on Earth' (selected and arranged), London, 1860, 8vo; 5th edit. (enlarged), 1882. 3. 'Bishops and Clergy of other Days; or, the Lives of two Reformers and three Puritans' (Hooper, Latimer, Ward, Baxter, and Gurnall), London, 1868, 8vo. 4. 'The Christian Leaders of the Last Century; or, England a Hundred Years ago', London, 1869, 8vo. 5. 'Lessons from English Church History: a Lecture,' London, 1871, 8vo. 6. 'What do we owe to the Reformation?' London, 1877, 8vo. 7. 'Facts and Men. Being Pages from English Church History between 1563 and 1643,' London, 1882, 8vo. 8. 'Principles for Churchmen: a Manual of Positive Statements on doubtful or disputed Points,' London, 1881, 8vo. 9. 'The Upper Room. Being a Few Truths for the Times,' London, 1888, 8vo.

S

SALVIN, OSBERT (1835-1898), naturalist, second son of Anthony Salvin [q. v.], was born at Elmshurst, Finchley, Middlesex, on 25 Feb. 1835. He was educated under the Rev. Charles Worsley at the Manor House, Finchley, and at Westminster School (admitted 17 Jan. 1846), going in 1853 to Trinity Hall, Cambridge, where he took a scholarship at the end of his first year, and graduated B.A. as senior optime in the mathematical tripos of 1857. He graduated M.A. in 1860, and was elected an honorary fellow of his college in 1897. While at Westminster he and his elder brother built and fitted two small steamers,

which were ultimately bought for use on some of the Indian rivers. A born naturalist, and especially addicted to ornithology, entomology, and palæontology, Salvin devoted much of his leisure time at Cambridge to their pursuit, and on taking his degree joined his second cousin by marriage, Mr. (afterwards Canon) Tristram, in a five months' natural history exploration of Tunis and Eastern Algeria.

In the autumn of 1857 Salvin visited Guatemala with Mr. George Urs Skinner, the discoverer and importer of orchids. In the middle of the following year he joined Mr. (afterwards Sir) Edward Newton in the

Antilles, but returned after a few months to Central America, where he proved himself an unsurpassed collector. Returning to England in May 1860, he set off again in the autumn of 1861, in company with his old college friend, Mr. F. Duncane Godman, for Guatemala, twice ascending the Volcan de Fuego near that city. This tour ended in January 1863, and soon after his return home he was induced to undertake the management of some engineering works in the north of England, but this employment being distasteful did not last long.

On 24 May 1866 he married Caroline, daughter of Mr. W. W. Maitland of Lough-ton, Essex, and in 1873, accompanied by her, made another journey to Central America, returning by way of the United States, in order to inspect the collections in the principal museums.

In 1874, on the foundation of the Strickland curatorship of ornithology in the university of Cambridge, Salvin accepted the post and filled it till 1882, when, having succeeded to his father's property, he removed to Hawksfold, near Farnhurst, Sussex. There he died from an affection of the heart on 1 June 1898. He became a fellow of the Zoological Society in 1860, of the Linnean Society in 1864, of the Royal Society in 1878, frequently serving on their councils; he joined the Royal Geographical Society in 1863, and was also a fellow of the Entomological Society.

Salvin's opinion was widely sought by his fellow naturalists on account of the soundness of his advice and the breadth of his scientific views; his knowledge in all branches of his favourite science was extensive, though his attention was more particularly directed to the birds of tropical America, on which he was an acknowledged authority, and to the Lepidoptera Rhopalocera among insects.

The work in connection with which he was probably best known is the 'Biologia Centrali-Americana,' edited conjointly with Mr. F. D. Godman, the two friends being themselves responsible for the sections 'Aves' (1879-98) and 'Lepidoptera Rhopalocera' (begun in 1879).

Salvin was author of: 1. 'Exotic Ornithology,' with P. L. Solater, London, 1869, fol. 2. 'Synopsis of the Cracidae,' with P. L. Solater, London, 1870, 8vo. 3. 'Nomenclator Avium Neotropicalium,' with P. L. Solater, London, 1873, 4to. 4. 'On the Procellariidae,' 'On the Birds collected in Antarctic America,' and 'On the Steganopodes and Impennes,' the last two with P. L. Solater in 'Reports of the Scientific

Results of the Challenger Expedition' ('Zoology,' vol. ii. 1881). 5. 'A Catalogue of the Collection of Birds formed by . . . H. E. Strickland,' Cambridge, 1882, 8vo. 6. 'Catalogue of the Picarie (Upupa and Trochili) in the . . . British Museum,' London, 1892, 8vo. 7. 'Catalogue of the . . . Tubinares in the . . . British Museum,' London, 1898, 8vo. He also contributed notes (1) 'On some Venezuelan Birds' to Spence's 'Land of Bolivar,' vol. ii. 1878; (2) 'On Collecting and Preserving Reptiles and Fish' to the Royal Geographical Society's 'Hints to Travellers,' 6th edit. 1889, and 7th edit. 1893; descriptions of Lepidoptera Rhopalocera to (3) Jameson's 'Story of the Rear Column' (1890), and (4) Whymper's 'Travels among the Great Andes of the Equator' (1891). He completed Lord Lilford's 'Coloured Figures of the Birds of the British Islands,' 7 vols. 1885-97 [see POWERS, THOMAS LITTLETON, Suppl.] He was one of the originators of the 'Ibis,' of which he edited series iii. and iv. 1871-82, and compiled an index to series i-iii. (1879); and for the Willoughby Society he edited 'Sir A. Smith's Miscellaneous Ornithological Papers,' 1880, and 'Leach's Systematic Catalogue of the Specimens of the indigenous Mammalia and Birds in the British Museum,' 1882. He was also author, or joint author with Mr. Godman or Mr. Solater, of upwards of 120 papers on ornithology or the Lepidoptera Rhopalocera that appeared in various scientific journals or transactions of learned societies from 1856. He devised the simple method, now commonly adopted in museums, of constructing cabinets for natural history specimens whereby deep and shallow drawers are interchangeable.

SAXE-COBURG-GOTHA, DUKEDOM.
[See ALFRED ERNEST ALBERT, 1844-1900.]

SEDGWICK, AMY (afterwards Mrs. PARKES, Mrs. PEMBERTON, and Mrs. GOESTERY) (1830-1897), actress, was born in Bristol in October 1830. After acting as an amateur in London in 1852, it is said under the name of Mortimer, she appeared at Richmond theatre as Julia in the 'Hunchback.' She was then seen at Bristol as Mrs. White in the farce of that name, and at Cardiff as Pauline in the 'Lady of Lyons.' After playing in various Yorkshire towns she was engaged by Knowles for three seasons at Manchester, where she became a favourite. Her first appearance in London was made on 5 Oct. 1857 as Pauline in the 'Lady of Lyons.'

at the Haymarket, where on the 13th she played Constance in the 'Love Chase.' On 7 Nov. she was the first Hester Grazebrook in Taylor's 'Unequal Match,' a part with which she was ever after associated. Beatrice in 'Much Ado about Nothing' followed in February 1858, Julia in the 'Hunchback' on 1 March, and on 30 June Lady Teazle. Subsequently she was seen as Juliana in the 'Honeymoon,' was on 12 March 1859 the original Kate Robertson in Palgrave Simpson's 'The World and the Stage,' and played Rosalind, Peg Woffington, Miss Dorillon in 'Wives as they were and Maids as they are,' Mrs. Hallor in the 'Stranger,' and Marie de Fontanges in 'Plot and Passion.' On 9 May 1860 she was the first Una in Falconer's 'Family Secret,' on 23 June Miss Vandeleur in 'Does he love me?' by the same writer, and Lady Blanche in Taylor's 'Babe in the Wood' on 10 Nov. In 1861 she was at the Olympic, where she was the first Mrs. Bloomly in H. Wigan's 'Charming Woman' on 20 June. At the Princess's she was on 19 Feb. 1863 the first Orelia in Lewis Filmore's 'Winning Suit.' She was also the first Phoebe Topper in 'One Good Turn deserves another,' and Aurora M'loyd in Mr. Cheltenham's adaptation so named. In 1866 she managed the Haymarket during a summer season, and on 2 Oct. at Drury Lane played Lady Macbeth to the Macbeth of Sullivan, and afterwards to that of H. Talbot. At the Haymarket she was on 8 July 1867 the first Blanche de Raineourt in Mead's adaptation, the 'Coquette.' On 10 Oct. 1868, as directress under H. B. Lacy, she opened the Marylebone, renamed the Alfred, with 'Pindee Singh' by C. H. Stephenson, in which she was Pindee Singh. The experiment was a failure. In Miss Le Thière's 'All for Money,' Haymarket, 12 July 1869, she was the first Ida Fitzhubert. Her last appearance in London was at the Haymarket as Constance in the 'Love Chase' (May 1877). She instructed pupils and gave dramatic recitals, reading more than once before Queen Victoria. Miss Sedgwick married in 1858 Dr. W. B. Parkes, who died in 1893. She was subsequently known (1876) as Mrs. Pemberton. She then married Mr. Goostrey. Her portrait as Constance was presented to the corporation of Brighton, where she lived for some years. Subsequently she removed to Hayward's Heath, where she died on 7 Nov. 1897, and was buried on the 11th. She was a capable actress, though she failed to reach the first rank.

[Personal knowledge; The Players, 1860; Scott and Howard's Blanchard; Daily Tele-

graph, 9 Nov. 1897; Era, 13 Nov. 1897; Athenæum, 13 Nov. 1897; Era Almanack, various years; Sunday Times, various years; Pascoe's Dramatic List.] J. K.

SEDGWICK, ROBERT (d. 1650), governor of Jamaica, was the son of William Sedgwick of London (*Thurloe Papers*, v. 155; *Forster, Alumni Oxon.* i. 1382), and brother of William Sedgwick (1610?-1669?) [q.v.]. He has been identified with the Sedgwick who came over to New England in 1635, in the ship *True Love*, aged 24, although in this record of the custom house his name is written 'Jo.' instead of 'Ro.' Sedgwick. He was made a freeman of Massachusetts on 9 March 1637 (*SAVAGE, Genealogical Dict. of the First Settlers in New England*, iv. 48). Sedgwick, who had some military training, and is said by Edward Johnson to have been 'nurst up in London's Artillery garden,' was chosen captain of the Charlestown trained band, and was, in 1638, one of the founders of 'The Military Company of Massachusetts.' His name is the third in the foundation charter (*ib.*: *RATERS, Hist. of the Honourable Artillery Company*, i. 326). He was commander of the *Castle* in Boston Harbour in 1641, and was major-general of the Massachusetts forces in 1652. In 1653 Sedgwick was in England, and Cromwell selected him to command an expedition intended to drive the Dutch from the New Netherlands, giving him the rank of major in the army. He raised, in spite of various obstructions, a few hundred men in the New England colonies, and was about to set out against the Dutch (June 1654), when news of the peace with Holland put a stop to his proceedings (*Thurloe Papers*, ii. 416). On this Sedgwick turned his forces against the French in Acadia, captured their forts of St. John's and Port Royal, and a settlement at Penobscot, and added Acadia to the British dominions (*ib.* ii. 426, 584; *Cal. State Papers, Colonial*, 1574-1674, Addenda, p. 89).

In the summer of 1655, after the conquest of Jamaica, the Protector appointed Sedgwick one of the civil commissioners for the government of his new acquisition. The instructions describe him still merely as 'Major Sedgwick,' but it is evident that Cromwell relied much on his experience of colonial life and his influence in New England (*Thurloe*, iv. 684; *Cal. State Papers, Colonial*, 1574-1660, p. 429). In October 1655, when Sedgwick arrived at Jamaica, he found the troops dying fast, everything in disorder, and necessities of every kind wanting. 'You must in a manner begin the work over again' was his message to Cromwell; but, though in-

wardly desponding of the future of the colony, he kept a brave front to the public, and under his energetic and judicious administration things slowly mended (*Thurloe Papers*, iv. 151, 451, 600, 748). Cromwell rewarded his zeal by sending him a commission as major-general and commander-in-chief, which reached Jamaica early in May 1656. But Sedgwick never took up the command, and died on 24 May 1656. According to his secretary, the new responsibility imposed upon him aggravated his illness and brought him to his grave. 'There is so much expected of me,' said he, 'and I, conscious of my own disabilities, having besides so untoward a people to deal with, am able to perform so little, that I shall never overcome it; it will break my heart' (*ib.* v. 12, 138, 164). The secretary describes Sedgwick as being 'generally beloved and esteemed by all sorts of people,' and Carlyle characterises him as 'a very brave, zealous, and pious man, whose letters in *Thurloe* are, of all others, the best worth reading on this subject.'

Sedgwick left a widow, Joanna, and five children (*Thurloe Papers*, iv. 155, 158). The Protector granted her a pension of 100*l.* per annum, and ordered her husband's arrears to be paid to her (*Cal. State Papers, Colonial*, 1674-1680, pp. 418, 452).

[*Thurloe State Papers*, vols. 1-v.; *Cal. State Papers, Colonial*; Puffrey's *Hist. of New England*, ii. 281, 297; Carlyle's *Cromwell*; Savage's *Genealogical Dict. of the First Settlers in New England*.] C. H. F.

SELWYN, JOHN RICHARDSON (1844-1898), bishop of Melanesia, younger son of George Augustus Selwyn (1809-1878) [q. v.], first bishop of New Zealand, was born on 20 May 1844 at the Waimatā, in the Bay of Islands, in the northern part of New Zealand. He came to England in 1854, and was educated at Eton and Trinity College, Cambridge. He was a noted oarsman and not a very keen scholar, but graduated B.A. with a third class in the classical tripos in 1866; he proceeded M.A. in 1870. In 1867 he paid a visit to his father in New Zealand, intending to enter the legal profession after his return; but the sight of his father's labours and the influence of Bishop John Coleridge Patteson [q. v.] inspired him with the desire to be a missionary, and decided him to seek ordination in the English church. He was ordained deacon on Trinity Sunday, 1869, by his father, who was then bishop of Lichfield. His first curacy was at Abrewas, where he remained for a year and a half. He then

proceeded as curate-in-charge to St. George's, Wolverhampton, in the absence of the vicar, who was involved in a feud with his parishioners. Selwyn's tact and energy resulted in his becoming vicar of St. George's, but on hearing of Bishop Patteson's death in 1871 he decided to offer himself as a missionary to the Melanesian mission. He married Miss Clara Innes in January 1872, and in February 1873 husband and wife sailed for Melanesia. He reached his headquarters at Norfolk Island in October 1873, after a distressing attack of rheumatism, which was Selwyn's first warning that his vigorous frame was not to save him from severe illness.

Selwyn's energy and natural gift of leadership soon pointed him out as the proper successor to Bishop Patteson. He was nominated to the post, and the nomination was confirmed by general synod in 1877. On 18 Feb. 1877 he was consecrated bishop of Melanesia at Nelson. In December 1877 his wife, who had rejoined him after a visit to England, died in childbirth, and in the next year he lost his father. These blows abated none of his energy, but they brought about an indifference to personal comfort and a recklessness to exposure which laid the seeds of the painful illnesses from which he afterwards suffered acutely. In August 1885, when on a visit to England, he married his second wife, Miss Annie Mort, and returned hopefully to his diocese; but in 1889 his ague and rheumatism culminated in abscesses in his legs, which compelled his return to England in 1890. By operations cutting the sinews of his right leg he was permanently crippled and forced to give up all idea of resuming his work in Melanesia. On his recovering his general health he was asked to accept the mastership of Selwyn College, Cambridge, and he held the position till his death at Cambridge on 12 Feb. 1898.

Bishop Selwyn's manly endurance of pain and discomfort, his tact and practical ability in extending his missionary labours and gaining a footing on dangerous islands, and the simple sincerity of his religious faith made him in his generation a typical missionary bishop, and the peculiar circumstance of his appointment to the mastership of Selwyn College brought his career and personality home to Englishmen in an unusually vivid and familiar way. His influence at Cambridge was largely instrumental in starting the 'Cambridge House' in London, and he recommended practical missionary effort, both at home and abroad, with exceptional success to the undergraduates.

He published 'Pastoral Work in the Colonies and the Mission Field,' London, 1897, 8vo.

[F. D. How's Bishop John Selwyn: a Memoir, 1899; Life of his father, by G. H. Curteis, 1889; Laird's Graduated Cantab.; Times, 14 Feb. 1898.] R. B.

SÉQUARD, CHARLES EDWARD BROWN (1817-1894), physiologist. [See BROWN-SÉQUARD.]

SERVICE, JAMES (1823-1899), politician and pioneer colonist of Melbourne, Australia, son of Robert Service, was born at Kilwinning, Ayrshire, in November 1823. He was in early life connected with the mercantile firm of Thomas Corbett & Co., Glasgow, but he broke off the connection in August 1853, when he emigrated to Melbourne. There he at once founded the commercial firm of James Service & Co., with which his name was thenceforth associated. Throughout life he was busily engaged as a merchant and bank director, but from the first he took a leading part in public and municipal affairs in Melbourne. When Sir William Foster Stawell [q. v.], then attorney-general, was made chief justice, Service was elected in his stead as member for Melbourne in the legislative assembly in 1857.

In the next parliament Service was elected for Ripon and Hampden, and from October 1859 to September 1860 was minister for lands in the Nicholson government [see NICHOLSON, WILLIAM, 1816-1865], when he introduced the first land bill involving the principle of 'selection before survey.' This important measure was rejected by the legislative council, whereupon Service conferred what has been rightly described as 'an enormous boon on the colony,' by passing what is popularly called the Torrens Act for facilitating the transfer of real property [see TORRENS, SIR ROBERT RICHARD].

In 1862 Service visited England, returning to Australia in March 1865, when he found the colony seething over the new protectionist tariff of the McCulloch government [see MCCULLOCH, SIR JAMES]. Protection henceforth was the popular democratic cry, but Service remained a staunch free-trader. Such an attitude, despite his liberal views on the land question, effectively kept him out of parliament until 1874. In that year he was returned for Maldon, and took office as treasurer in the Kerford government, which lasted but a short time. On 29 July 1878 Service, who was always a strong imperialist, was the principal speaker at the great meeting of the citizens of Mel-

bourne held in support of Lord Beaconsfield's action at the Berlin Congress.

In 1880 Service was called upon to form a cabinet, but it was immediately ousted on making an appeal to the country in regard to the constitutional reform of both houses of the legislature. He revisited England, returning in 1883 to Victoria, when he was elected member for Castlemaine as the recognised leader of the conservative or 'constitutional' party. He next formed a coalition with Mr. (afterwards Sir) Graham Berry, the liberal leader, and became premier of Victoria in 1883.

The Service-Berry government attempted to deal with the thorny question of civil service reform by transferring all appointments into the hands of government commissioners; thereby it was hoped to deal a fatal blow to political 'influence' and possible ministerial corruption. Service himself took up a strong position with regard to the annexation by European powers of Western Pacific islands. This question led to a desire for federation, which has reached its culmination in the formation of the Australian commonwealth in 1900. With a view to procuring the adoption of the principles of federation Service brought about in 1882 the Sydney conference, and in 1884 carried through the Victorian parliament a bill for the creation of a federal council of Australasia. This federal council first met at Hobart on 25 Jan. 1886.

In 1885 Service resigned the premiership of Victoria and revisited England, where he was appointed one of the four Victorian delegates at the colonial conference of 1887 in Downing Street. Service believed with Sir Samuel Griffith that that conference ought to be the precursor of other similar conclaves, and argued that the nebulous feeling in favour of imperial federation should issue in the formation of a superior council, in which the entire empire should be represented, and which should 'have the supreme control of all purely imperial affairs' (MENNELL).

On returning to Victoria, Service became a member of the upper house—the legislative council—taking his seat for the Melbourne province. He declined to act as one of the Victorian representatives of the Sydney convocation in 1891, and gradually retired from active participation in public affairs. He died at Melbourne on 12 April 1899. Few Australian statesmen have so worthily gained the popular esteem of their fellow-colonists.

[Mennell's Dictionary of Australasian Biography; H. J. Robinson's Colonial Chronology; Levey's Victorian Men of the Time; Times,

13 and 14 April 1899; Who's Who, 1899; the leading Australian journals, and personal knowledge.] A. P. M.

SEWELL, WILLIAM (1780-1858), veterinarian, third principal of the Royal Veterinary College, London, was born in 1780 of quaker parents resident in Essex. He was apprenticed at an early age, probably in 1796, to Edward Coleman (1764-1839), the second principal of the Veterinary College; and at Coleman's request Sewell was appointed his assistant at the college on obtaining his diploma in 1799.

Sewell first came into prominence in connection with his supposed discovery (in 1803) of a canal pervading the 'medulla spinalis,' an account of which he presented to the Royal Society in a paper read by Sir Everard Home (see *Trans. Roy. Soc.* 1808). Though Sewell's opinions on this point were erroneous, the credit has been claimed for him of having been 'on the brink' of the great discoveries made many years subsequently by Sir Charles Bell (*Vet.* 1831 iv. 629, 1834 vii. 180). In 1815 he made a tour through France, visiting the veterinary establishments at Lyons and Paris; in 1816 he made a similar tour of inspection through Germany by way of Vienna, Prague, Berlin, and Hanover. A report of this tour was laid before the governors of the Veterinary College in 1818.

In the same year an extremely important discovery, or rather re-discovery, 'which has added years of comfort and usefulness to the existence of so many of our quadruped servants' (*Vet.* 1831, iv. 335), that of neurotomy, was published in a paper presented by Sewell to the governors of the Veterinary College. Some years later, in 1823, a fuller and more detailed account was published in the 'Elementary Lectures on the Veterinary Art' of William Percevall, attributing to Sewell the chief credit of the discovery (see also *Vet.* 1834 vii. 20, 1836 ix. 367). Sewell also practised a new method of treating splints, considering the use of the firing-iron as barbarous and cruel (*Vet.* 1835, viii. 504). He also claimed to have discovered a cure for glanders, in the use of sulphate of copper. This was looked upon with considerable distrust by his fellow veterinarians, and the proposal of a pecuniary reward which was made at a meeting of the governors of the Veterinary College was defeated, largely owing to the opposition of Professor Coleman (*Vet.* 1829, ii. 246). Sewell also incurred the displeasure of certain of his fellow veterinarians for having reported some of his remarks on glanders to the College of Physicians rather than to the veterinary profession.

In 1835-6 Sewell was president of the Veterinary Medical Society, and on 17 Feb. 1836 a handsome testimonial was presented to him by the members of that society 'for his efficient services during a period of twenty-one years.' But immediately after disputes took place which led to the secession of Sewell, Charles Spooner (1806-1871) [q. v.], subsequently his successor, and others.

On the death of Coleman in 1839, Sewell was appointed to succeed him as principal of the college, delivering his inaugural lecture on 18 Nov. 1839 (*Vet.* 1839, xii. 804). Considerable disapproval was, however, manifested at his undertaking to lecture on cattle pathology, a subject in which he was not considered to be sufficiently qualified, his department being rather that of surgery. In 1842, however, an alteration was made, and Professor J. B. Simonds was appointed to lecture on the diseases of cattle, sheep, and pigs (*Vet.* 1840, xiii. 500, 549, 550, and 558). The death of Professor Coleman placed Sewell in many respects at the head of his profession, and his position received further recognition in 1852 by his election (in succession to Mr. William Robinson of Tamworth) as third president of the Royal College of Veterinary Surgeons, which had been incorporated in 1844.

In 1840, during the prevalence of an epidemic of what has been since named 'foot and mouth disease,' the Royal Agricultural Society of England issued a circular to its members detailing full particulars as to the treatment of the disease according to the method recommended by Professor Sewell. Sewell was on this account attacked by his brother veterinarians on the plea that his circular had spoilt their practice (*Vet.* 1841, xiv. 196, 664). In 1841 Sewell reported to the Royal Agricultural Society on the epidemic (*Journal R.A.S.E.* vol. ii. p. cxix). Towards the end of his life, owing to his advanced age and occasional illness, he confined his attention in great part to the general direction of the college, the actual duties of lecturing falling chiefly on younger men, Assistant Professor Spooner and Professor Simonds. Sewell died on 8 June 1853 at the age of seventy-two, and was buried at Highgate cemetery. He married late in life and left no family.

Sewell wrote nothing beyond a few contributions to the veterinary and medical periodicals, and a report (1818) of his visit to the principal veterinary schools of the continent. Both his skill as an operator and his efficiency as a lecturer have been disputed (*Vet.* 1834 vii. 667, 1841 xiv. 37), but he ap-

It was nevertheless to have achieved a considerable success in both.

[The Veterinarian, *passim*, especially obituary in number for 1 July 1853; Professor J. B. Smoother's *Life of William Sewall*, 1897, 870 (unpublished); private information.] E. C. E.

SHARP, ISAAC (1806-1897), missionary, elder son of Isaac Sharp of Brighton by his first wife, Mary Likeman, was born there on 4 July 1806. His father had joined the Society of Friends upon his marriage, and at eleven the son was sent to a Friends' school at Earl's Colne, Essex. At twenty-four he went to Darlington as private secretary to Joseph Pease [see under **PEASE, EDWARD**], succeeding afterwards to the management of the Peases' Middlesborough estate. About 1832 he first began to preach, and in 1843 was 'recorded' a minister by Darlington monthly meeting. From this body he afterwards received on forty-five separate occasions certificates or credentials for gospel travel at home and abroad. He commenced (in 1846) by visits to Norway, Orkney and Shetland, Iceland, Farøe, Denmark, Greenland, and Labrador. But it was not until he was past sixty that he embarked upon the wider range of sustained missionary activity, to which the remaining years of his life were devoted.

In 1877 he started for the southern hemisphere, being welcomed at Cape Town by members of all denominations, including Sir David Tennant and Lady Frere, in the absence of her husband, Sir Henry Bartle Edward Frere [q. v.], then governor of Cape Colony. Sharp travelled in a Cape cart northward to Shoshong, visited King Khama, and was at Kuruman shortly before the outbreak of the Zulu war. Reaching Kimberley in September 1878 he was invited to take up his quarters at Government House. After visiting the French missions in Basutoland, he left for Madagascar, where an important station had been founded by the society of friends. He next proceeded by Sydney, Melbourne, and other Australian towns, to Stewart Island and New Zealand, San Francisco, and thence to the States and Mexico. Seeing the quaker poet, Whittier, as he passed eastward, Sharp arrived in England, after seven years' absence, in March 1884.

In 1891, when in his eighty-fifth year, and in spite of a complaint which at times rendered him dependent upon surgical aid and skilled nursing, his buoyant faith and spirits induced him to set out on another long voyage. In the face of much opposition, medical and otherwise, and a severe illness in Paris, he started for the East, and was able to carry

out a long-cherished plan of visiting Constantinople, India, Japan, and the interior of China.

A fortnight after his return to England he set out on his eighth visit to Norway. Some weeks spent in Syria during the autumn of 1895 proved to be his final evangelical tour. On nearly the last day of 1896 he lectured to a large audience at Devonshire House, Bishopsgate, upon his foreign experiences as a missionary, but on returning home took a chill. He died on 21 March 1897, aged ninety, at Ettington, Warwickshire, and was buried on 26 March in the Friends' burial-ground close by.

Isaac Sharp's short robust figure, twinkling eyes, and alert manner, to the last utterly belied his years. Possessed of a peculiarly musical voice, his preaching, like himself, exhaled love. He spoke no language but his own. A ready fund of anecdote and abundant humour endeared him to the inmates of lonely mission stations and isolated dwellings from the northern to the southern polar circle, no less than to all in England. An excellent correspondent, he expressed himself as readily in verse as in prose.

By his wife Hannah Procter, whom he married in February 1839, and who died four years later, he had two daughters, one of whom married and settled at San José, California.

SHAW, JOHN (1789-1815), corporal 2nd lifeguards, son of William Shaw, a farmer, was born at Wollaton, Nottinghamshire, in 1789, and educated at Trowell Moor school. While a mere stripling he obtained a local reputation as an expert boxer by defeating a man three stone heavier than himself. On 16 Oct. 1807 he enlisted as a private in the 2nd lifeguards, and soon attracted the notice of his officers by the strength he displayed in the regimental exercises. Discovering his boxing abilities they made arrangements for him to spar at the Fives Court in Little St. Martin Street, the principal London boxing hall. In consequence of his success there the officers took him to Jackson's Rooms, 13 Bond Street, a fashionable club and school of instruction, where amateurs were wont to meet and box professionals. Shaw was pitted against and defeated Captain Barclay, a gentleman noted for his punishing powers. Shaw became a frequenter of Jackson's Rooms, and his fame as a boxer soon spread

abroad. As a swordsman he was equally expert, and was, in fact, skilled in the use of most modern weapons of offence and defence. He was now six feet and half an inch in height, and so magnificently developed that he sat as a model to Haydon the sculptor. One day, when near Portman Square, three hulking fellows taunted Shaw with being a stay-at-home soldier. He promptly knooked them down. They sprang to their feet and attacked him, but in a few minutes were compelled to seek safety in flight. In 1812 Shaw was persuaded to enter the prize ring, and on 12 July of that year defeated at Coombe-Warren a man named Burrows. Early in 1815 he issued a challenge to fight any man in England, and on 15 April, at Hounslow Heath, fought his second battle in the prize ring, defeating Edward Painter [q. v.] in twenty-eight minutes. He was now spoken of as the future champion, but before Tom Cribb [q. v.] had time to accept his challenge the 2nd lifeguards were ordered to the continent. Shaw's civilian admirers immediately offered to purchase his discharge, but he declined to entertain the idea. Early in the morning of 18 June, the day on which Waterloo was fought, Corporal Shaw was sent out in command of a foraging party, but hurried back with his men in time to take part in the first charge. A cuirassier rode straight at Shaw, who calmly parried the thrust, and with one terrific stroke, the first blow he had dealt in real warfare, out through the Frenchman's helmet and skull down to the chin. Shaw then rode at an eagle-bearer, killed him, and seized the eagle. He relinquished it, however, while cutting his way through the foes who immediately surrounded him. Although wounded, he took part in several other charges, exhibiting on each occasion his strength and marvellous dexterity with the sword. In the last charge but one made by the 2nd lifeguards, Shaw became separated from his comrades, and was quickly surrounded by the enemy. He fought desperately and killed nine of his opponents before his sword broke. Scorning surrender, he tore the helmet from his head, and, using it as a coscus, dealt some terrific blows before he fell to the ground, picked off by a cuirassier, who sat a little distance away, coolly firing his carbine.

After the battle was won Shaw struggled on the track of his victorious countrymen, and at night a wounded lifeguardsmen, lying on a dunghheap, saw Shaw crawling towards him. 'Ah, my dear fellow, I'm done for!' Shaw whispered feebly, and lay down beside him. At daybreak he was found there dead.

SIDGWICK, HENRY (1838-1900), philosopher, born at Skipton, Yorkshire, on 31 May 1838, was third (and second surviving) son of the Rev. William Sidgwick, head-master of Skipton grammar school, by his wife Mary (Crofts). The father died on 22 May 1841. Henry Sidgwick was sent to a school at Blackheath in 1849, and to Rugby in September 1852, where his mother took a house next year. Edward White Benson (afterwards Archbishop) [q. v. Suppl.], a cousin of the Sidgwicks, and then a master at Rugby, became an inmate of the household. He had a great influence upon Sidgwick, whose sister he afterwards married. The boy was 'bookish' and took no interest in football or cricket. His intellectual development was precocious, and his great ambition was to become a distinguished scholar like his cousin. Instead of standing for a scholarship at Balliol, he decided to enter Trinity College, Cambridge, of which Benson was a fellow. He left Rugby in 1855 as senior exhibitioner, and began residence at Cambridge in the October of that year. His career at college was brilliant. He won a Bell scholarship in 1856, the Oraven scholarship in 1857, the Greek epigram in 1858, and was thirty-third wrangler, senior classic, and first chancellor's medallist in 1859. In 1857 he became a scholar, and in 1859 fellow and assistant-tutor, of his college. He had given the highest promise of future distinction in the field of classical scholarship. He was, however, already devoting himself to other aims. He had been led to philosophical studies during his undergraduate career. He had at the beginning of his second year joined the well-known 'Apostles' Society. Its purpose was to encourage the frank and full discussion of every possible question. Sidgwick, though one of the youngest men of the same university standing, showed a remarkable maturity of intellect, which enabled him to take a leading position in the society. The discussions also revealed to him the natural bent of his mind. He resolved to devote his life to the study of great philosophical problems. He and his friends were convinced of the necessity of a reconstruction of religious and social creeds in accordance with scientific methods. He was, like his contemporaries, greatly influenced by the teaching of J. S. Mill, then in the ascendant. He was repelled, however, by the agnostic tendencies of Mill's school, and could not find full satisfaction in

his philosophy. He turned for a time to historical inquiry, and in 1862 passed some weeks at Dresden to initiate himself in the study of Arabic. He worked at Arabic and Hebrew for some time with a view to a comparative study of Semitic religions. Becoming convinced that he could not give the time necessary for researches which would after all not answer the fundamental problems, he again returned to purely philosophical questions. He was a member of a little society which used to meet at the house of John Grote, then Knightbridge professor, to read and discuss philosophical papers. His companions were attempting to improve the Cambridge course by a more liberal encouragement of such studies. The moral sciences tripos, founded in 1861, was admitted as a qualification for a degree in 1860. Sidgwick examined in 1865 and 1866, and prepared himself by careful study for the task. In 1869 he exchanged his classical lectureship for a lectureship in moral philosophy, and resolved to devote himself to the foundation of a philosophical school in Cambridge. The agitation for the removal of religious tests had been for some time occupying university reformers. Sidgwick had taken part in the movement. He now became doubtful as to his own position. The declaration which he had made sincerely at the time had ceased to represent his belief. He decided that he was bound to resign the position for which it had qualified him. He gave up his fellowship in October 1869, and his action had a marked effect in stimulating the agitation for the abolition of tests. The measure was finally carried in 1871. His colleagues showed their respect for Sidgwick by permitting him to retain his lectureship, and from this time till his death he continued to lecture in various capacities. In 1872 he was an unsuccessful candidate for the Knightbridge professorship on the death of F. D. Maurice. In 1875 he was appointed to a 'professorship on moral and political philosophy' in Trinity College. In 1883 he resigned this post on being elected to the Knightbridge professorship, vacant by the death of Professor Birke, Maurice's successor. Sidgwick's fitness for the post had been established by the publication of his treatise upon ethics in 1874. He was elected to an honorary fellowship of his college in 1881, and re-elected to an ordinary fellowship in 1885.

Sidgwick had meanwhile taken up other duties. He had felt that his devotion to speculative inquiries did not absolve him from the discharge of practical functions. He had been interested from an early period in the

question of female education. The admission of girls to local examinations showed the importance of providing a system of lectures. In 1869 Sidgwick had devised and made known a scheme for this purpose. It was taken up warmly, and its success suggested that a house should be provided at Cambridge for the students. Sidgwick made himself responsible for the rent, and in 1871 invited Miss Ann Kemm Clough [q. v.] to become superintendent. In 1874 a company was formed to place the scheme on a solid foundation. Sidgwick subscribed and energetically supported the scheme, which was carried out by the opening of Newnham Hall in 1876. In the same year Sidgwick married Miss Eleanor Mildred Balfour, sister of the Right Hon. A. J. Balfour. The Sidgwicks took a most important part in the later development of the new system. In 1880 the North Hall was added to Newnham, and Mrs. Sidgwick became vice-president under Miss Clough. The Sidgwicks resided in North Hall for two years, when Mrs. Sidgwick resigned her post. In 1892, upon Miss Clough's death, Mrs. Sidgwick became president of the college, and she and her husband resided there during the remainder of Sidgwick's life. Throughout the whole period Sidgwick took a most active part in the whole movement. He successfully advocated the admission of women to university examinations in 1881. He was always a member of the college council, and was also for a time on the council of the women's college at Girton. Besides advising Miss Clough at every point of the new movement, he interested himself in the details of management; he made himself beloved by students and teachers, and he contributed most liberally to the funds required for the extension of the college. No one deserves a larger share of the credit for initiating and carrying out successfully a scheme which has had so great an effect upon the education of English women.

Sidgwick in later years had also to discharge many duties of academical administration. His absence from the governing body prevented him from taking any direct part in the changes made in his college under the commission of 1877. He had, however, the influence due to the recognition of his high qualities of mind and character, both in his own college and in the university generally. When the new university statutes came into force in 1882 he was appointed member of the general board of studies; he was for some time secretary to the board, and remained a member till 1899. He was also on the council of the senate from 1890 to 1898. The unanimous testi-

mony of his collagues shows that he took a very active and influential part in the debates, and united unflinching courtesy to singularly keen and ingenious criticism. He interested himself especially in financial matters. The taxation of the colleges for university purposes had given rise to difficulties in consequence of the decline of the college revenues under agricultural depression. Sidgwick got up the facts, devised an elaborate scheme for reconciling the conflicting interests, and showed that he could have been a competent chancellor of the exchequer. His schemes failed to secure acceptance from an appearance of over-subtlety. His anxiety to do justice to all sides led to some excess of complication and refinement. He is admitted, however, to have taken a most important part in changes by which the system of Cambridge education has been materially modified and new studies successfully introduced. He showed his interest in a very tangible form by munificent subscriptions, which enabled the university to build a museum of physiology, and to start lectures in law and philosophy—measures which must otherwise have been abandoned or delayed.

Sidgwick's retirement from the council was partly due to the rejection of the proposal for granting titular degrees to women. He had never been in favour of precisely assimilating male and female education; and he had some hesitation in accepting the proposals made by the more advanced party. He finally supported them, however, and incurred some unpopularity from conservatives, who dreaded that they might be committed to further measures. Although no one could doubt Sidgwick's absolute sincerity, his action was thought to be dangerous. He did not offer himself for re-election to the council. He was now anxious to finish his literary work, and thought of retiring from his professorship in order to devote himself exclusively to this task.

His labours had not been confined to the fields already indicated. He was an active member of a mendicity society in Cambridge, and of its successor, the Charity Organisation Society. He had also from an early period been interested in 'psychical research,' on the ground that some 'direct proof of continued individual existence' was important to morality. He was president of this society, founded in 1882, for its first three years, and again from 1888 to 1893. He investigated the alleged phenomena with scrupulous rigour, and always continued to attach importance to the results, though he does not appear to have arrived at very de-

finite conclusions. Sidgwick was also a member of several societies founded for the purpose of philosophical discussion. He was one of the first members of the Metaphysical Society, which included some of the most distinguished representatives of opposite schools of belief; of a similar society in Cambridge; and of the later Synthetic Society, which aims at facilitating the reconstruction of essential religious beliefs. He became at once, as Canon Gore testifies, 'the life and soul of that society.' Sidgwick was seen at his best in such meetings. Besides his dialectical ability, he was delightful in simple social occasions. He was admittedly a first-rate talker. A singular ingenuity and vivacity of thought and constant play of humour were combined with perfect simplicity, absence of self-assertion, and ready appreciation of other men's points of view. His unmistakable sweetness of nature gained him innumerable friends and made him an invaluable link between members of the various circles to which he belonged. The same qualities gave a special value to his lectures. His intellectual position prevented him from being the lawgiver of a school or the head of a party. His aim was to encourage the freest possible investigation of first principles, and he shrank from any premature adoption of dogmatic conclusions. The position of philosophical studies at Cambridge made his classes very small. But he had several distinguished pupils who have borne most complete testimony to his power of stimulating their intellectual activity, and setting an impressive example of love of truth and of hopefulness not damped by provisional scepticism.

In the beginning of 1900 Sidgwick became aware of symptoms of a dangerous disease. He accepted his position with characteristic courage and simplicity, joined in social meetings, spoke with marked brilliance at the Synthetic Society, and showed undiminished interest in his various undertakings. He resigned his professorship, but these were hopes that he might still be able, after a surgical operation, to do some literary work. The hope, however, was disappointed, and he died at the house of his brother-in-law, Lord Rayleigh, on 28 Aug. 1900.

The remarkable quality of Sidgwick's intellect is displayed in all his writings, although his ethical speculations seem to be regarded as his most valuable. His acuteness and subtlety of his thought have suggested to some readers that he was essentially sceptical or preferred a balance between two opinions to the acceptance of either. It should rather be said that he was of sin-

gularly cautious temperament, unwilling to advance without making sure of his ground, and anxious to adhere to commonsense. He had been greatly influenced by the teaching of J. S. Mill, and was always opposed to mystical and transcendental methods. His 'Methods of Ethics' (1874) is intended to reconcile the utilitarian with the intuitionist theories, and to show that, properly understood, Butler and Kant may supply a rational base for the morality which, like J. S. Mill's, takes the general happiness for its criterion. He holds, however, that both are opposed to the egoistic system, the irrationality of which cannot be demonstrated without a philosophical elaboration not as yet satisfactorily achieved. Whatever the value of the conclusion, the book has stimulated thought by its candid and thorough examination of most important ethical problems. The 'Principles of Political Economy' (1888) was a product of Sidgwick's early interest in social problems. He again starts from the teaching of J. S. Mill, and endeavours by acute criticisms to get rid of the excessive rigidity of this old 'classical' economy, while showing that it embodied much sound reasoning which required to be taken into account by social reformers. Professor Marshall says that the discussion of the proper functions of government is admitted to be 'by far the best thing of the kind in any language.' His power of dealing with practical questions is shown by the memoranda which he was invited to lay before the commissions on the financial relations of England and Ireland, and upon local taxation. The 'Elements of Politics' (1891) is intended to supply the want of an adequate treatise upon the subject by starting from the old lines of Bentham and Mill. It seems to share in some degree their weakness of inadequately recognising the importance of historical methods. Sidgwick seems to have felt this, and in later years gave some lectures upon the history of political institutions. He left a considerable mass of manuscript, dealing with metaphysical and other topics. Sidgwick contributed many articles to 'Mind,' of which he was for some time a principal supporter, and to other philosophical journals. He wrote in various reviews both upon philosophical and literary matters. He was an admirable literary critic, and his conversation often turned upon literary topics. After his death there were issued several volumes of his unpublished or uncollected writings.

A portrait of Sidgwick by Mr. Shannon is in the college hall at Newnham. A memorial Sidgwick lectureship in moral science

was founded in the university of Cambridge in 1901.

Sidgwick's works are: 1. 'The Ethics of Conformity and Subscription,' 1871. 2. 'The Methods of Ethics,' 1874; 2nd edit. 1877, 3rd edit. 1884; (supplements were separately published in 1878 and 1881, giving the alterations made in the previous editions); 6th edit. 1901. 3. 'The Principles of Political Economy,' 1883; 3rd edit. 1901. 4. 'The Scope and Method of Economic Science,' 1886 (presidential address to the economic section of the British Association). 5. 'Outlines of the History of Ethics,' 1880 (enlarged from the article 'Ethics' in the 'Encyclopædia Britannica,' 9th edition); 5th edit. 1902. 6. 'The Elements of Politics,' 1891. 7. 'Practical Ethics: Addresses and Essays,' 1898. Posthumously issued: 8. 'Lectures on the Ethics of T. H. Green, H. Spencer, and J. Martineau,' 1902. 9. 'Philosophy, its Scope and Relations,' 1902. 10. 'The Development of European Polity,' 1903. 11. 'Miscellaneous Essays and Addresses,' 1904. 12. 'Lectures on Kant,' 1905, ed. J. Ward.

SILVESTER DEVERDON (d. 1254), bishop of Carlisle. [See EVERDON.]

SIMPSON, WILLIAM (1823-1899), artist and war correspondent, was born in Glasgow on 28 Oct. 1823. His father, William Simpson (1791-1879), a native of Perth, was a marine engineer, and afterwards a mechanic in Parkholm Printfield, near Glasgow. While quite young Simpson was sent to Perth to live with his grandmother, and began his

education in a writing-school there, where he remained for fifteen months. This was all the regular schooling he ever received, though he afterwards became deeply learned in the European and oriental languages. In 1835 Simpson entered an architect's office in Glasgow, and there his taste for art was developed, and two years afterwards he was apprenticed to the firm of Allan & Ferguson, lithographers, Glasgow. David Allan took much interest in his apprentice, and confided to him the task of sketching many old buildings for Stuart's 'Views of Glasgow,' which was published in 1848 by the firm. Simpson removed to London in 1851, and was employed by Day & Son, then the leading lithographers. After the Crimean war broke out Simpson was engaged upon views of the Baltic battles for Colnaghi & Son; and when that firm decided to publish a large illustrated work on the Crimean campaign from sketches made on the spot, Simpson was selected for the work on Day's recommendation. He started on short notice, arrived at Balaklava in November 1854, and remained with the British army till the fall of Sebastopol. Simpson was thus the pioneer war-artist, and received several commissions to paint incidents in the war for the queen. The 'Illustrations of the War in the East' was published in two volumes by Colnaghi in 1855-6, and is still regarded as a brilliant example of lithographic work. Before Simpson returned from the Crimea he was invited to join the Duke of Newcastle on a tour in Circassia, and made many sketches in that little-known country.

The Indian mutiny of 1858 had directed attention to Hindostan, and Day & Son projected a large illustrated work on India, and sent Simpson thither to make sketches. For three years he remained there, visiting both the eastern and western cities, sojourning in the Himalayas, and even venturing across the border of the 'forbidden land' of Tibet, where he had access to some of the Buddhist temples. The finishing of his pictures occupied four years after his return, and he had completed 250 of them and placed them in the hands of Day & Son when that firm suddenly became bankrupt, and all Simpson's work for seven years was reckoned as an asset of the firm, because of the advances they had made to meet his current expenses. It was after this catastrophe in 1866 that Simpson met Mr. (later Sir William) Ingram, editor and proprietor of the 'Illustrated London News,' and a lifelong connection began. Simpson was sent to Russia to make sketches of the marriage of the Czarewitsch (afterwards Alexander III.) with the Princess

Dagmar of Denmark in November 1866; and he then accompanied King Edward VII, when Prince of Wales, on a tour to various parts of Russia.

Before his return to England Simpson visited Jerusalem, where Captain (afterwards General Sir Charles) Warren was conducting excavations for the Palestine Exploration Fund committee, and Simpson made over forty sketches of archaeological interest, afterwards exhibited under the title 'Underground Jerusalem.' In 1868 Simpson accompanied the Abyssinia expedition under Lord Napier of Magdala, returning in time to sketch the opening of the Suez Canal in 1869. His next experience was in the Franco-Prussian war of 1870, when he went to Paris in July, travelled to Metz, was sent back to Paris a prisoner as being a suspected spy, made his escape, and travelled to Sedan in time to witness the surrender of Napoleon III. Returning to Metz, he was shut up in that fortress with Marshal Bazaine until the capitulation. A severe illness compelled him to return to London; but in 1871 he was again in Paris during the Commune. Next year he was sent to China to make sketches of the marriage of the Emperor Tung-Chiu, and while there he wrote a remarkable series of letters to the 'Daily News' on Chinese social life. From China he went to Japan, crossed the Pacific to San Francisco, traversed California and North Carolina during the rebellion of the Modoc Indians, visited the Yosemite Valley, Utah, the Mammoth Caves of Kentucky, and Niagara, bringing back numerous sketches, afterwards exhibited under the title 'Round the World.'

In 1875 Simpson returned to the Far East as artist, making sketches for the 'Illustrated London News' of the tour of the Prince of Wales through India. He exhibited over two hundred water-colour sketches of Indian scenery after his return. His next journey was in 1877 to Mycenae, Troy, and Ephesus, to make sketches of the excavations directed by Dr. Schliemann, and over sixty pictures were shown by him in London, besides the drawings made for the 'News.' When Sir Samuel Brown was engaged in Afghanistan in 1878-9, Simpson accompanied him through the whole campaign, was at the Khyber Pass, at Fort Ali Musjid, and at the signing of the peace at Gundamuok. He remained at home till 1884-5, when he went with Sir Peter Lumsden to Penjdeh with the Afghan boundary commission, which was his last expedition. He settled at Willesden in 1885, where he spent the remainder of his

life in literary work, and he died there on 17 Aug. 1899.

Simpson occupied a unique position in art. On 28 March 1874 he was elected an associate of the Institute of Painters in Water Colours, and became a full member on 8 Feb. 1879. It was partly through his exertions that it was elevated by charter to the Royal Institute of Painters in Water Colours in 1884, and he continued to exhibit annually up till the year of his death. Between 1874 and 1899 he exhibited fifty-nine pictures. Simpson was one of the original members of the Institute of Painters in Oil Colours (now the Society of Oil Painters) when it was founded in 1883, but retired in 1886. His reputation as an artist in black-and-white overshadowed his fame as a colourist, though his pictures were always characterised by accurate draughtsmanship and quiet natural colour. He was a fellow of the Royal Geographical Society, an honorary associate of the Royal Institute of British Architects, and also of the Glasgow Institute of Architects; a member of the Royal Asiatic Society; one of the executives of the Palestine Exploration Fund; and founder, with Samuel Birch [q. v. Suppl.], of the Society of Biblical Archaeology. To all these societies he contributed numerous papers on a vast variety of subjects, chiefly architectural and archaeological. Simpson had a long and honourable connection with freemasonry, which he often found useful in his travels. He was initiated in 1871, was one of the first members of the Quatuor Coronati Lodge in 1880, and two years afterwards became worshipful master, contributing many valuable papers to the 'Transactions.' His last combined literary and artistic work was a volume entitled 'Glasgow in the Forties,' in which he reproduced many of his sketches of Glasgow street architecture, made about 1848, and wrote descriptive letterpress. The volume was published posthumously in December 1899, with a biographical sketch.

Simpson's principal works were: 1. 'Illustrations of the War in the East,' 1855-6, 2 vols. with 81 tinted plates. 2. 'Meting the Sun, a Journey round the World,' 1873. 3. 'Picturesque People, or Groups from all Quarters of the Globe,' 1876. 4. 'Shikar and Tamasha, a Souvenir of the Visit of the Prince of Wales to India,' 1876. 5. 'The Buddhist Praying Wheel,' 1896. 6. 'The Jonah Legend,' posthumously, October 1899. 7. 'Glasgow in the Forties,' posthumously, December 1899, with a portrait of the author. He was a voluminous contributor to the 'Proceedings' and 'Transactions' of

the Royal Geographical Society, the Society of Biblical Archaeology, the Royal Asiatic Society, and the Quatuor Coronati Lodge, 'Harper's Magazine,' 'Fraser's Magazine,' and 'Good Words.' A list of his principal papers will be found in the memoir prefixed to 'Glasgow in the Forties' (1899).

[MS. Autobiography by Simpson, 1893; Memoir by the present writer, in Glasgow in the Forties; People's Friend, May 1900; Ars Quatuor Coronatorum, xii. 187; private information.] A. H. M.

SKENE, FELICIA MARY FRANCES (1821-1899), novelist, was the youngest daughter of James Skene [q. v.] of Rubislaw and his wife, Jane Forbes, daughter of Sir William Forbes, sixth baronet of Fittisigo. She was born on 28 May 1821 at Aix in Provence. As a child she played with the children of the exiled king, Charles X, at Holyrood; as a girl she was the guest of Lord Stratford de Redcliffe at the embassy at Constantinople; and later was the friend of, among others, Sir John Franklin, Puss, Landon, and Aytoun. Her father was a great friend of Sir Walter Scott, and it is said that Miss Skene as a child used to sit on the great novelist's knees and tell him fairy tales. In 1838 the family moved to Greece on account of Mrs. Skene's health. Skene built a villa near Athens, in which they lived for some time. They returned to England in 1845, and lived first at Leamington and afterwards at Oxford.

Miss Skene was a very accomplished woman and devoted to good works. When, in 1854, cholera broke out at Oxford, she took part, under Sir Henry Acland [q. v. Suppl.], in organising a band of nurses. Some of them were sent afterwards to the Crimea, and during the war Miss Skene remained in constant correspondence with Miss Nightingale. She took much interest in rescue work in Oxford, and was one of the first 'lady visitors' appointed by the home office to visit the prison. Some of her experiences were told in a series of articles in 'Blackwood's Magazine,' published in book form in 1889, and entitled 'Scenes from a Silent World.'

Her earliest published work was 'Isles of Grace, and other Poems,' which appeared in 1843. A devotional work, 'The Divine Master,' was published in 1852 (11th edit. 1888), memoirs of her cousin Alexander Penrose Forbes [q. v.], bishop of Brechin, and Alexander Lyongus, archbishop of the Cyclades, in 1876 and 1877 respectively. In 1866 she published anonymously a book called 'Hidden Depths.' It was republished with her name and an introduction by Mr.

W. Shepherd Allon in 1886. Though to all appearance a novel, the author states that it is not a work of fiction in the ordinary acceptation of the term, as she herself witnessed many of the scenes described. She was a constant contributor to the magazines, and edited the 'Churchman's Companion,' 1862-80. She died at 34 St. Michael Street, Oxford, on 6 Oct. 1890.

Other works are: 1. 'Wayfaring Sketches among the Greeks and Turks and on the Shores of the Danube,' 1847. 2. 'Use and Abuse, a Tale,' 1849. 3. 'The Tutor's Ward,' 2 vols., 1851. 4. 'St. Albans, or the Prisoners of Hope,' 1853. 5. 'The Ministry of Consolation,' 1854. 6. 'Penitentiaries and Reformatories,' 1865. 7. 'The Shadows of the Holy Week,' 1883. 8. 'A Strange Inheritance,' 3 vols., 1886. 9. 'The Lesters, a Novel,' 2 vols., 1887. 10. 'Awakened,' ('Christian World Annual'), 1888. 11. 'A Test of the Truth,' 1897.

SMITH, BARBARA LEIGH (1827-1891), foundress of Girtou College, Cambridge. [See BIOGRAPHY.]

SMITH, JOSEPH (1733?-1790), soldier, born in 1732 or 1733, was the son of an engineer officer in the East India Company's service. In 1752 he served with rank of ensign under Olive in the Carnatic, and on 4 Sept. he discovered a large body of European and native troops hastening to relieve Chengalpat. By his prompt warning he largely assisted in their defeat. On 21 April 1753 he was detached with forty Europeans and two hundred sipáhis from Arcot to act with the Nabob's forces against the French. Being deserted by the Nabob's troops in an action which took place between Arcot and Vellore, he was made prisoner and carried to Vellore.

After his release he attained the rank of captain, and in September 1754 commanded a strong detachment stationed at Koiládi to protect the coolies who were repairing the watercourses there. In 1755 he accompanied the expedition under Lieutenant-colonel Heron to Madura, and was in command of the rearguard when it was attacked in the pass of Natam. Much of the baggage was lost, but Smith succeeded in preserving the guns and ammunition of the force from capture. In May 1757, during the absence of Captain Calliaud, he was in command of the garrison at Trichinopoly while it was unsuccessfully besieged by the French. He remained in that as second in command until the departure

of Calliaud on 15 Sept. 1758, when he was again left in charge. The post was one of some responsibility owing to the number of French prisoners confined in the town, who frequently outnumbered the European garrison by more than five to one. In March 1760 he was ordered to reinforce the troop under Major George Monson [q.v.] besieging Kárikál, and arrived on 3 April in time to assist in the reduction of the place. In September he was appointed to the rank of major, and placed in command of a brigade during the siege of Pondicherry by Monson and (Sir) Eyre Coote (1726-1788) [q.v.]

Smith proceeded to England on leave about 1763, returning with the rank of colonel in September 1766. He was selected to proceed to Haidarábád to concert operations against Haidar Ali with Nizám Ali. On the commencement of hostilities he warned the Madras government of the bad faith of the Nizám, but failed to convince them that the Nizám was secretly concerting measures with Haidar against Madras. He was in command of the forces intended to co-operate with the Nizám, and, assured of his treachery, moved towards the Madras frontier. At the end of August the combined forces of Haidar and the Nizám burst into the province, but Smith opposed their advance at the pass of Chengama on 3 Sept. He was worsted and compelled to retreat but defeated the confederates in the neighbourhood of Trinomalai on 26 Sept., when the confederates lost four thousand men and sixty-four guns. Having thus cleared the province of the enemy, Smith placed his army in cantonments. The failure of the invasion and of some later operations induced the Nizám to open negotiations with Smith, and a treaty was concluded on 23 Feb. 1768. His subsequent operations were hampered by the injudicious plan of campaign forced upon him by the Madras council, by their neglect of the commissariat, and by the incompetence of one or two of the English officers; but it is probable that his skill and courage saved Madras from serious disaster, and even from conquest. Haidar had the highest respect for his military talents, and, on the conclusion of peace in 1769, desired an interview with him and requested his portrait. His reputation was so great in Southern India that on 4 Oct. 1768 a considerable detachment of the companies under Colonel Wood was saved from defeat by Haidar by the happy stratagem of raising shouts of 'Smith,' as if that commander had arrived with reinforcements.

Shortly after the conclusion of peace he attained the rank of major-general, and in

August 1773 he undertook the siege of Tanore, which was carried by assault on 17 Sept. This was his last action of importance, and shortly afterwards he retired to England. He died at his house in the Circus at Bath on 1 Sept. 1790.

[Orme's Hist. of Military Transactions in Indostan, 1861; Wilks's Hist. Sketches of the South of India, Madras, 1869; Mill's Hist. of India, ed. Wilson, iii. 473-8; Gent. Mag. 1790, 7. 881.] E. I. C.

SMITH, SIR ROBERT MURDOCH (1835-1900), major-general, archaeologist, and diplomatist, second son of Hugh Smith, medical practitioner at Kilmarnock, and Jean Murdoch, was born at Kilmarnock on 18 Aug. 1835. He was educated at Kilmarnock academy and at Glasgow University (where he was a pupil of Lord Kelvin), and in 1855 he was one of the first to obtain by open competition a commission in the corps of royal engineers. In 1856-9 he commanded the party of sappers which accompanied the archaeological expedition under (Sir) Charles Thomas Newton [q. v. Suppl.] to Asia Minor, the principal results of which were the discovery of the mausoleum at Halicarnassus and the acquisition—under a firman of the Porte—for the British Museum, of the magnificent sculptures with which that monument was adorned. It was Smith who hit upon the real site of the mausoleum, and discovered the key to its restoration, as appears from his report on the subject to Newton and his drawings of the restored building (*Parl. Papers*, 1857-8, lx. 694-709). The excavations are described by Newton in his 'Discoveries at Halicarnassus, Cnidus, and Branchidæ,' 1862.

In November 1860, along with Lieutenant E. A. Porcher, Smith started on another adventurous expedition, at his own expense but under government sanction, to explore the ancient cities of the Cyrenaica in North Africa. For a year the two officers conducted excavations at and about Cyrene, and returned with many valuable examples of Greek sculptures and inscriptions, which they placed at the disposal of the government, and which are now in the British Museum. The story of the expedition is told in the 'History of the recent Discoveries at Cyrene' (London, 1864, fol.), written by Smith, and illustrated from drawings by Porcher.

After a period of employment on fortification duties in the war office, Smith was selected in August 1863 for special service on the Persian section of the proposed line of telegraph from England to India. Permission to construct the line through Persia had only been obtained after much difficulty

and delay, and the officers entrusted with the task had to contend not only with great physical difficulties, but with the hostility and distrust of Persians of all classes, from the shah downwards. All these difficulties, however, were overcome in time, and the line was successfully completed. Smith acted first as superintendent of the Teheran-Kohrud section of the line. In 1865 he succeeded Major (afterwards Sir) John Bate-man Champain [q. v. Suppl.] as director of the Persian telegraph at Teheran. He filled this post with conspicuous ability and success for twenty years. Under his direction the working of the line reached a high standard of efficiency, and he was specially successful in conciliating native feeling. An excellent Persian scholar, he won the personal esteem and trust of the Persian ministers and princes with whom he had to deal, and not least of the late shah, Nasr-ed-Din, who in 1885 presented him with a sword of honour.

When in Persia Smith devoted much time and attention to the acquisition of the valuable collection of Persian objects of art now in the South Kensington Museum. In 1885 he was offered and accepted the directorship of the Science and Art Museum at Edinburgh, and returned to this country. In 1887 he became director-in-chief of the Indo-European telegraph department on the death of Sir John Champain. In the same year he was sent on a special mission to Persia to adjust the differences that had arisen with the Persian government in relation to the occupation of Jask by British-Indian troops. This question was settled to the satisfaction of both governments. Other questions were also discussed, and Smith succeeded in obtaining a prolongation to 1905 of the two existing telegraph conventions, which would otherwise have expired in 1888 and 1895 respectively. On leaving Teheran he was presented by the shah with a diamond snuff-box, and on his return to England he was gazetted K.O.M.G. (10 Jan. 1888) in recognition of his services in Persia.

Shortly afterwards the office to which Smith had been appointed in 1887 was (on his own recommendation) abolished as an unnecessary expense to the public. He had retired from the army in December 1887 with the rank of major-general. Henceforward his work lay in the Edinburgh Museum. Under his direction it was greatly enlarged, the administration was improved, and many valuable objects, especially in the department of eastern art, were added to its contents.

He was a member of the board of manufactures in Scotland and chairman of the

committee of the Scottish National Portrait Gallery.

Among his minor writings were the treatise on Persian art, issued by the science and art department in 1876, a paper on 'The Strategy of Russia in Central Asia' (*Journal of the United Service Institution*, xvii. 212-22), and a lecture to the Society of Arts on 'The Karun River as a Trade Route' (*Journal of the Society of Arts*, xxxvii. 561-7), for which he was awarded the society's silver medal. This paper was described by Vambéry as 'perhaps the best paper hitherto published on the subject.'

In February 1899 the magistrates of his native town (Kilmarnock) presented him with the freedom of the burgh. Smith died at Edinburgh on 8 July 1900, and was buried in the Dean cemetery.

In 1869 he married Eleanor, daughter of Captain John Robinet Baker, R.N. (she died in Persia in 1883). Of nine children, seven died in Persia—three on three consecutive days at Kashan—and he was survived by two daughters.

[*Life of Major-general Sir Robert Murdoch Smith*, by his son-in-law, W. K. Dickson, Edinburgh, 1901; obituary notice in the Scotsman, 5 July 1900; Lord Curzon's Persia, passim; Goldsmid's Telegraph and Travel; Scottish Geographical Mag. v. 6, 484-5; Scotsman, 26 Oct. 1896 ('An Archaeological Expedition to Asia Minor Forty Years ago'); Royal Engineers Journal, September 1900 ('Sir R. M. Smith,' by Major-general Sir Charles Wilson); private information.] G. S.-n.

SMYTH, CHARLES PIAZZI (1819-1900), astronomer, second son of Admiral William Henry Smyth [q. v.], was born at Naples on 3 Jan. 1819, and named after the Sicilian astronomer, Giuseppe Piazzi. He was educated at the Bedford grammar school, and in 1835 entered the Royal Observatory, Cape of Good Hope, as assistant. There he observed the great comets of 1835 (Halley's) and 1843, and co-operated with Sir Thomas Maclear [q. v.] in the extension of Lacaille's arc. In 1845 he succeeded Thomas Henderson [q. v.] as astronomer-royal for Scotland, but found, to his acute disappointment, the observatory in a state of dilapidation, and the English home office deaf to petitions for its renovation. He, however, completed the reduction of Henderson's meridian observations, and continued the determination of star-places, publishing the results in the 'Edinburgh Astronomical Observations' (vols. xi. to xv.) In 1852 he organised time-signalling by the dropping of a ball on the Calton Hill, improved to a time-gun in 1861. He went to Sweden for the

total solar eclipse of 28 July 1851, but saw little except mist from his post on the island of Bue (*Memoirs Roy. Astr. Society*, xxi. 25). A sum of 500*l.* having been placed at his disposal by the admiralty for the purpose of experimenting upon telescopic vision on the peak of Teneriffe, he repaired thither in May 1856 in the yacht Titania, lent him by Robert Stephenson [q. v.]. Returning in October he published a popular account of the trip, entitled 'Teneriffe, an Astronomical Experiment' (London, 1858), and embodied the scientific results in a paper for the Royal Society, of which he was elected fellow on 11 June 1857 (*Phil. Trans.* cxlviii. 465), and in a report to the lords commissioners of the admiralty. They were also fully described in the 'Edinburgh Astronomical Observations' (vol. xii.)

In 1850 he visited the Russian observatories, and gave his impressions of them in 'Three Cities in Russia' (2 vols. London, 1862). Having published, late in 1864, 'Our Inheritance in the Great Pyramid' (5th edit., 1890), he hurried to Egypt and devoted the winter to measuring and surveying the edifice. His interpretation of its design, divinely revealed to its constructor, Melchisedec, precluded, he supposed, the commencement of the millennium in 1882; and he detected, among other mysteries conveyed by its proportions, a cryptographic solution of the problem of squaring the circle. A paper on the subject sent by him to the Royal Society having been denied a reading, he resigned his fellowship on 7 Feb. 1874, and gave his reasons to the public in a tract on 'The Great Pyramid and the Royal Society' (London, 1874).

Notwithstanding these deviations into 'paradox of a very high order' (in De Morgan's phrase), Smyth did admirable work in spectroscopy. He effectively promoted the study of telluric absorption (*Monthly Notices*, xxxix. 38), and brought the 'rain-band' into use for weather prediction (*Nature*, xii. 231, xiv. 9; *Journal Scottish Meteor. Society*, v. 81). A map of the solar spectrum constructed by him at Lisbon in 1877-8 (*Edin. Phil. Trans.* xix. 285) received the Macdougall-Brisbane prize of the Royal Society of Edinburgh; and he revised the work with a Rutherford grating at Madeira in 1880, and at Winchester in 1884 (*ib.* vol. xxxii.) His adoption of 'end-on' vacuum-tubes for the investigation of gaseous spectra (*ib.* xxx. 93, xxxii. pt. iii.; *Trans. Scottish Soc. of Arts*, x. 226) was an improvement of great consequence. He detected, in conjunction with Professor Alexander Herschel, the harmonic character of the carbonic-oxide spectrum, and

picked out six of the significant triplets in the spectrum of oxygen. The 'citron-ray' of the aurora was repeatedly measured by him in 1871-2 (*Comptes Rendus*, lxxiv. 597), and he observed the spectrum of the zodiacal light at Palermo in April 1872 (*Monthly Notices*, xxvii. 277). From the indications of thermometers buried on the Calton Hill (1837-1870) he inferred the subjection of the earth's temperature to a cycle identical with that of sunspots (*Proc. Roy. Society*, xviii. 311). A digest by him of meteorological data collected at fifty-five stations in Scotland appeared in vol. xiii. of the 'Edinburgh Astronomical Observations' (1871).

Smyth obtained in 1870 funds for a new equatorial, but the promised allowances for the cost of its working were not forthcoming. A committee appointed by the home secretary (the Right Hon. Richard Assheton Cross, now Viscount Cross) in 1870 to inquire into the affairs of the observatory recommended ameliorations never carried into effect; and at last, in 1888, Smyth resigned in disgust the post he had held for forty-three years, and withdrew to Clova, near Ripon in Yorkshire. There he executed a large solar spectrographic chart, with a Rowland grating, and studied cloud-forms by photography. He died on 21 Feb. 1900, and was buried in Sharow churchyard, Ripon. On 24 Dec. 1866 he married Jessie Duncan (d. 24 March 1890). She was the constant companion of his travels. They had no children. He bequeathed his residuary estate to the Royal Society of Edinburgh for defraying the expenses of printing his spectroscopic manuscripts, and of sending out occasional expeditions for spectroscopic research at high mountain stations. His membership of the Royal Astronomical Society dated from 1848. He was an honorary LL.D. of the university of Edinburgh, and a corresponding member of the academies of Munich and Palermo.

Besides the works already mentioned, he wrote: 1. 'Life and Work at the Great Pyramid,' 8 vols. London, 1867. 2. 'On the Antiquity of Man,' Edinburgh, 1868 (awarded the Keith prize of the Royal Society of Edinburgh). 3. 'Madeira Spectroscopic,' Edinburgh, 1882. One hundred entries under his name occur in the Royal Society's 'Catalogue of Scientific Papers.'

[Times, 24 Feb. 1900; Observatory, xxlii. 144, 184; Notice by Dr. Copeland in *Astronomische Nachrichten*, No. 3836, and *Popular Astronomy*, 1900, p. 384; *Nature*, 14 June 1900; A. S. Herschel on Smyth's Work in Spectroscopy; *Man of the Time*, 14th edit.; André et Rayet's *l'Astronomie Pratique*, ii. 12.]

A. M. C.

SNOWDON, JOHN (1558-1626), priest and political adventurer. [See CECIL.]

SPEARS, ROBERT (1825-1899), unitarian preacher and journalist, fifth son by the second wife of John Spears, foreman of ironworks, was born at Lemington, parish of Newburn, Northumberland, on 25 Sept. 1825. His father was a Calvinistic presbyterian, but the family attended the parish church. Brought up as an engineering smith, his love of reading led him to leave this calling and set up a school in his native village. He joined the new connexion methodists; a debate (1845) at Newcastle-on-Tyne between Joseph Barker [q. v.] and William Cooke, D.D., gave him the conviction that doctrine must be expressed in 'the language of scripture.' In 1846 he was master of the new connexion school at Scotswood-on-Tyne, and was taken on trial as a local preacher. A lecture at Blaydon, Northumberland, in 1848, by George Harris (1794-1859) [q. v.], was followed by an intimacy with Harris, to whom Spears owed his introduction to the unitarian body in 1849. Leaving the methodists, he became unitarian minister (without salary) at Sunderland (1852-8), where he conducted a very successful school, and originated (1856) a monthly religious magazine, the 'Christian Freeman' (etill continued). He removed to a pastorate at Stockton-on-Tees (1858-61), where he originated (30 Dec. 1859) the 'Stockton Gazette' (now the 'North-Eastern Gazette').

In 1861 Spears attracted the attention of Robert Brook Aspland [q. v.], was invited to London by Sir James Clarke Lawrence, bart. (d. 1898), and became (1862) minister of Stamford Street chapel, Blackfriars. In 1867 he was elected co-secretary of the British and Foreign Unitarian Association with Aspland, on whose death (1869) he became general secretary, 'put new life into every department,' and nearly quadrupled its income. In 1874 he left Stamford Street to take charge of a new congregation at College Chapel, Stepney Green. His theological conservatism was the cause of his resigning (1878) the denominational secretaryship. He at once established (20 May 1876) a weekly paper, the 'Christian Life,' as an organ of biblical and missionary unitarianism; in 1889 he bought up the 'Unitarian Herald,' a Manchester organ (which he had been invited to manage at its establishment in 1861), and amalgamated it with his paper. In 1886, aided by Matilda Sharpe, younger daughter of Samuel Sharpe [q. v.], he established a denominational school for girls at Channing House, High-

gate Hill, and in consequence left Stepney to found a unitarian chapel at Highgate. Among other new causes due directly to his suggestion, and largely to his aid, were those at Clerkenwell, Croydon, Forest Hill, Notting Hill, and Peckham; and, outside London, there were few parts of the country where his influence was not felt among unitarians as a stimulus to propagandist work. Biblical as he was in his own theology, he was deeply interested in the monotheistic movement of the Brahmo Somaj of India, and was in close contact with its leaders from the visit (1870) to this country of the late Keshub Chunder Sen (who was his guest). On his initiative was founded (7 June 1881) the 'Christian Conference,' which has brought together representatives of all denominations, from Cardinal Manning to Dr. Martineau. He had travelled in France, Italy, and America, and kept up a correspondence with liberal thinkers in all parts of the world. Personally he was a man of singularly winning characteristic; his massive head was full of strong good sense and marvellous knowledge of men and things; his robust energy was equalled only by his generous warmth of heart. He died at his residence, Arundel House, Highgate, of internal cancer, on 25 Feb. 1899, and was buried at Nunhead cemetery on 1 March. He married, first (1846), Margaret Kirton (d. 1867), by whom he had five children, of whom the youngest daughter survived him; secondly (1869), Emily Glover, who survived him with two sons and four daughters.

He published: 1. 'The Unitarian Handbook,' Newcastle-on-Tyne, 1859P, 12mo; 2nd edit. 1862, 12mo; later edit. revised by Russell Lant Carpenter (d. 1892). 2. 'Record of Unitarian Worthies' [1877], 8vo; the prefixed 'Historical Sketch' was reprinted, 1895, 8vo. He prefaced Belsham's 'Memoirs of Lindsey' (3rd edit. 1873, 8vo); compiled from Priestley's works 'The Apostolic and Primitive Church . . . Unitarian' (1871, 12mo); and wrote the introduction and appendix to Stannus's 'History of the Origin of the Doctrine of the Trinity' (1882, 8vo). He brought out popular editions of Channing's works, 1873, 8vo; 1884, 4to. His 'Scriptural Declaration of Unitarian Principles' has been the most widely circulated of unitarian tracts.

[Sketch of the Life, by Samuel Charlesworth, 1899, 12mo (reprinted from *Christian Life*, 4 March 1899); *Reminiscences of a Busy Life*, in *Unitarian Bible Magazine*, December 1895-January 1899; *Christian Life*, 25 March 1899.]

A. G.

STANSFELD, SIR JAMES (1820-1898), politician, born at Akeds Road, Halifax, on 5 Oct. 1820, was the only son of James Stansfeld (1792-1872), originally a member of a firm of solicitors, Stansfeld & Craven, and subsequently county-court judge of the district comprising Halifax, Huddersfield, Dewsbury, and Holmfirth. His mother was Emma, daughter of John Ralph, minister of the Northgate-End unitarian chapel, Halifax, and his sister married George Dixon [q. v. Suppl.] Brought up as a non-conformist, Stansfeld was in 1837 sent to University College, London, whence he graduated B.A. in 1840 and LL.B. in 1844. He was admitted student of the Middle Temple on 31 Oct. 1840, and was called to the bar on 26 Jan. 1849; he does not seem, however, to have practised, and later in life derived his income mainly from his brewery at Fulham.

On 27 July 1844 Stansfeld married Caroline, second daughter of William Henry Ashurst [q. v.], the well-known radical and friend of Mazzini, and in 1847 Stansfeld was himself introduced to the Italian patriot, with whom he formed an intimate friendship. Stansfeld sympathised with the chartist movement, though on one occasion Feargus O'Connor [q. v.] denounced him as 'a capitalist wolf in sheep's clothing.' He also took an active part in propagating radical opinions in the north of England, frequently spoke at meetings of the Northern Reform Union, and was one of the promoters of the association for the repeal of taxes on knowledge.

On 29 April 1859 Stansfeld was returned to parliament for his native town, Halifax, which he continued to represent for more than thirty-six years. In the House of Commons he generally acted with the extreme liberals led by Bright and Forster, and in June 1862 he moved a resolution, which was defeated by 367 to 35 votes, in favour of reducing national expenditure. His efforts were, however, mainly devoted to the furtherance of Italian unity, and he published several speeches and lectures delivered in that cause. When Garibaldi visited England in 1862 he chose Stansfeld as his adviser, and subsequently referred to him as a 'type of English courage, loyalty, and consistency, the friend of Italy in her evil days, the champion of the weak and of the oppressed abroad.' In February 1863 Stansfeld moved a resolution in the House of Commons of sympathy with the Poles, which was supported by Lord Robert Cecil (now Marquis of Salisbury), and in the following April Palmerston appointed Stansfeld a junior lord of the admiralty.

Stansfeld's tenure of this post was cut short by a remarkable incident. During the trial of Greco, early in 1864, for conspiring against Napoleon III, the procureur-impérial of France declared that Stansfeld had in 1855 been appointed 'banker to the Tibaldi conspirators' who sought the emperor's life, and that Mr. Flowers or M. Fiori (one of Mazzini's pseudonyms) corresponded with the would-be assassins from Stansfeld's house, 35 Thurlow Square. On 17 March 1864 the question was raised in the House of Commons, and Disraeli charged Stansfeld with being 'in correspondence with the assassins of Europe.' Stansfeld denied having ever been either treasurer or banker to the Tibaldi conspirators, though he admitted that he allowed his name to be inscribed on bank-notes, which he understood were to be devoted to the Italian cause; he did not deny that letters had been addressed to M. Fiori at his house, though he was unaware of it at the time, but repudiated the idea of Mazzini's complicity in the conspiracy. He was defended by Bright and Forester, and Palmerston declared his explanation to be quite satisfactory; the vote of censure was, however, lost by only ten votes, and as it was evident that renewed attacks on him were to be made, Stansfeld sent in his resignation, which Palmerston, after some hesitation, accepted early in April. Henry Crabb Robinson [q. v.], a friend of Stansfeld, thought he gained in public estimation by his conduct (*Diary*, 1872, ii. 383). On 11 July 1865 he was re-elected for Halifax without opposition, and in February 1866, when Lord John Russell had succeeded Palmerston as prime minister, Stansfeld became under-secretary of state for India in succession to the present Marquis of Dufferin and Ava. Four months later, however, the government was defeated, and the tories took office under Lord Derby.

In Gladstone's first administration (1868-1874) Stansfeld was successively made third lord of the treasury (December 1868), privy councillor (February 1869), financial secretary to the treasury (November 1869), president of the poor-law board (March 1871), and first president of the local government board in August following. Here Stansfeld did his best administrative work, and he retained this post until the fall of Gladstone's government in January 1874.

Stansfeld now obscured his political prospects by devoting himself heart and soul to the movement for the repeal of the contagious diseases acts. In 1879 he was put on a committee of the House of Commons to consider the subject; and when in 1882

the committee reported in favour of the maintenance of the acts, Stansfeld issued a minority report condemning them. He also attacked the conduct of (Sir) George Osborne Morgan [q. v. Suppl.] as chairman of the committee, and Lord Kimberley for defending the system as enforced at Hong Kong. Stansfeld himself was not a member of Gladstone's second administration, and he had in 1880 declined the office of chairman of committees of the House of Commons, on the ground that he had already held cabinet rank. On 16 March 1880, however, the cause which Stansfeld had championed triumphed, and the contagious diseases acts were repealed without a division. On 8 April Stansfeld succeeded Mr. Chamberlain as president of the local government board. Regarding Ireland as an oppressed nationality, he had little difficulty in adopting home rule, of which he remained a staunch advocate to the end of his life.

Stansfeld retired from the local government board on Gladstone's defeat in July 1886. During the session of 1888 he moved various amendments to Mr. Ritchie's local government bill, and in May 1892 he carried the second reading of a registration bill, the further progress of which was stopped by the dissolution at the end of June. Stansfeld was not included in Gladstone's last administration, and he refused the offer of a peerage. Before Lord Rosebery left office in June 1895 he made Stansfeld G.C.B. Stansfeld retired from the representation of Halifax in that month, and on 15 Oct. following was presented with a testimonial from the women of England for his services to morality and female suffrage. He died at his residence, Castle Hill, Rotherfield, Sussex, on 17 Feb. 1898, and was buried at Rotherfield on the 22nd. On the 18th the Italian chamber unanimously passed a vote of sympathy, out of respect for his efforts in the cause of Italian unity. A portrait of Stansfeld was painted in 1870; a sketch from it is given in Stansfeld's 'History of the Stansfelds' and in the 'Daily Chronicle' (18 Feb. 1898).

Stansfeld's first wife died in 1865, leaving one son, Mr. Joseph James Stansfeld (b. 1852), barrister-at-law; and on 22 June 1867 Stansfeld married his second wife, Frances, widow of Henry Augustus Severn of Sydney; by her, who survived him, Stansfeld had no issue.

STEEVENS, GEORGE VARRINGTON (1869-1900), journalist, son of James Steevens, was born at Sydenham on 10 Dec. 1869. He was educated at the City of London school, where he greatly distinguished himself in classics. He was captain of the school in 1887-8, and was elected in 1888 scholar of Balliol College, Oxford. At Balliol he fully maintained his reputation as a classical scholar. He was placed in the first class both in classical moderations and in the final classical school, and during the same period obtained the highest honours at each of the three examinations held in connection with the B.A. degree at the university of London. He graduated B.A. at both Oxford and London in 1892. In 1893 he was elected fellow of Pembroke College, Oxford. Although shy and retiring in general society, Steevens developed in his undergraduate days, both as a talker and as a writer in undergraduate periodicals, a wayward brilliance and amusing tendency to paradox.

Meanwhile at Cambridge, where he had many school friends, he made the acquaintance of Mr. Oscar Browning, fellow of King's College, whose liberal opinions attracted him. In the early autumn of 1893 he helped Mr. Browning in his candidature for the representation in parliament of East Worcestershire, and cleverly edited an electioneering paper in the constituency in the liberal interest. At the same period he made his first appearance in the London press with an original paper on 'The other View of Barnum,' which appeared in 'The Speaker.' At the beginning of Lent term, 1893, some friends at Cambridge who since the preceding May had conducted a weekly periodical called 'The Cambridge Observer,' invited Steevens to edit it. He edited the last seven numbers, and these evinced unmistakable talents for vivid journalism of literary quality. At the same time he began a connection with the 'National Observer,' a brilliant weekly London paper, of which W. E. Henley was editor. Henley formed a high opinion of Steevens's abilities and personality, and a friendship sprang up between them which lasted till Steevens's death.

In the early summer of 1893 Steevens went to London and definitely adopted the calling of a journalist. He joined the staff of the

'Pall Mall Gazette,' of which Mr. W. W. Astor had just become proprietor, and Mr. Henry Cust editor. Steevens proved a first-rate contributor of literary and descriptive articles, which, if not always convincing, rarely lacked the saving graces of originality and independence. While writing in the 'Pall Mall Gazette' he became a frequent contributor of essays to the 'New Review,' of which his friend Henley had become editor in 1894, and to 'Blackwood's Magazine.' In his contributions to these magazines Steevens's literary power was seen to the best advantage. In 1895 he published a volume of realistic 'Monologues of the Dead,' portions of which had already appeared in periodicals; the speakers are classical heroes and heroines who express themselves with too studied a crudeness and carelessness of language to win complete success. A second volume next year on 'Naval Policy' (1896), which had also been contributed serially to periodicals, illustrated the growth of Steevens's political interests, and the decay of his youthful sympathies with current liberalism.

When in 1895 Mr. Cust, the editor of the 'Pall Mall Gazette,' resigned his position, Steevens left the office with him. In 1896 he joined the staff of the 'Daily Mail,' a new London daily paper, founded by Alfred Harmsworth, afterwards Lord Northcliffe, who acted as editor. After he had written in London many miscellaneous descriptive articles, Steevens was commissioned to serve as a special correspondent abroad. He was ordered to the United States to report for the 'Daily Mail' the progress of the presidential election, which Mr. W. J. Bryan vainly contested against Mr. William McKinley. Steevens expanded his articles into a spirited account of America, which was published in 1897 under the title of 'The Land of the Dollar.' This proved the best of a long series of similar volumes. In the same year Steevens had his first experience as a war correspondent. Joining the Turkish army under Edhem Pasha he described the Greco-Turkish war in Thessaly, and his articles were republished under the title of 'With the Conquering Turk.' In the summer he went to Germany, and sent home some sketches of German life, which were republished, with other sketches of London and Paris from the 'Daily Mail,' in 'Glimpses of Three Nations' (posthumously issued). At the end of 1897 he visited Egypt, and the result was the volume called 'Egypt in 1898.' In 1898 he returned to Egypt to join as war correspondent the army which was sent out under General (afterwards Lord)

Kitchener to destroy the power of the khalifa in the Soudan. His vivid descriptions of this expedition were collected after their appearance in the 'Daily Mail' into what proved his most popular book, 'With Kitchener to Khartum.' In the winter of 1898-9 Steevens went out to India in the track of Lord Curzon, the newly appointed viceroy, and his record of the journey ultimately took the form of the volume called 'In India.' Returning from India in 1899, he went to Rennes to report the second trial of Captain Alfred Dreyfus, and these articles, after serving their purpose in the 'Daily Mail,' were reissued in the book entitled 'The Tragedy of Dreyfus.'

On the conclusion of the Dreyfus trial in September 1899 Steevens was ordered by his editor to South Africa, where the pending negotiations between the Transvaal government and the British government rendered war probable. On the actual outbreak of hostilities in October he joined the army which under Sir George White undertook the defence of Natal. Within three weeks of the opening of active operations, on 1 Nov., that force was besieged in Ladysmith. The siege of Ladysmith cost Steevens his life. On 13 Dec. he sickened of enteric fever, and when he appeared to be on the road to convalescence he died at five in the afternoon on 16 Jan. 1900. He was buried in Ladysmith cemetery at midnight of the same day. The town was relieved on 28 Feb.

The articles Steevens had sent home from South Africa were issued posthumously in a volume called 'From Cape Town to Ladysmith,' with a 'last chapter' by Mr. Vernon Blackburn. A 'Memorial edition' of Steevens's collected works appeared in seven volumes (1900-2), under the editorship of his friends Mr. G. S. Street and Mr. Blackburn. The first volume, 'Things Seen' (1900), brings together Steevens's scattered contributions to magazines and newspapers, and contains an appreciative memoir of the author by his friend W. E. Henley. The second volume was called 'Glimpses of Three Nations' (1901).

Steevens's portrait was painted by the Hon. John Collier in 1898; a replica was presented by Steevens's schoolfellows to the City of London school, where it was unveiled on 28 Oct. 1900. A reproduction in photogravure of Mr. Collier's portrait is prefixed to the 'Memorial edition' of Steevens's works.

In 1894 he married Mrs. Rogerson, who was many years his senior; she survived him.

As a man Steevens was distinguished by

admirable courage and resolution. It was his endeavour in journalism to present in words with all possible vividness, frankness, and terseness what he saw, thought, and felt. The success he often achieved, especially in the miscellaneous articles collected in the volume called 'Things Seen,' was sufficient to prove that his capacities were in harmony with his aims. But only a small fraction of his work does genuine justice to his powers. The hurried conditions under which he ordinarily wrote lent an aspect of crudity to many of his books and articles, and often gave the reader the uncomfortable impression of a vain straining after effect. His premature death prevented the fulfilment of his high literary promises.

[W. E. Henley's Memoir prefixed to *Things Seen*, 1900; *The Last Chapter* by Mr. Vernon Blackburn in *From Cape Town to Ladysmith*, 1900; Memoir by Mr. B. J. Abrabams in *City of London School Mag.* for March 1900, with early portrait from photograph.] S. L.

STEPHENS or STEVENS, THOMAS (1549?-1619), jesuit missionary and author, born about 1549, was doubtless son of Thomas Stevens of Bushton in the parish of Clyffe Pipard, Wiltshire. He has been described (FOLLY, *Records S.J.* vii, 1458) as a native of 'Bulstan' in the diocese of Salisbury, a place which has been erroneously identified with Bourton, Dorset. Stephens was elected scholar of Winchester in 1564, his age being given as thirteen (KIRBY, *Winchester Scholars*, p. 139). According to Hakluyt he was for a time at New College, Oxford, but his name is not to be found in the registers. He found a friend and patron in one Thomas Pound, and the two formed a resolution to proceed to Rome and enter the Society of Jesus. Pound was, however, arrested on the eve of his departure, and remained in prison for thirty years. Stephens went to Rome alone, and at St. Andrew's College there he was admitted to the Society of Jesus on 20 Oct. 1575, his age being given as twenty-six. At the Roman College he studied philosophy under Garnett and theology under Parsons. On 4 Nov. 1578 he drew up an account of his friend Pound, and a petition from him to be admitted, in spite of his absence, to the Society of Jesus; Stephens's account is extant among the archives at Brussels and at Stonyhurst (*Collectio Cardwelli*, i. 16; FOLLY, iii. 580-4).

Meanwhile a perusal of the life and works of St. Francis Xavier had animated Stephens with the desire to become a missionary in the East Indies. He sailed from Lisbon in 1579, and on arriving at the Portuguese

settlement at Goa, he wrote to his father an account of the journey, which is printed in Hakluyt's 'Principal Navigations,' in Purchas's 'Pilgrimes,' and in John Hamilton Moore's 'New and Complete Collection of Voyages and Travels' [1780], i. 337-8. He laboured as a jesuit missionary at Goa for forty years; on 10 Feb. 1587-8 he was made spiritual coadjutor, for five years he was rector of Salsette College, and for a time he was minister of the *domus professorum* at Goa. He was the first to make a scientific study of Canarese, the vernacular Malabar tongue, and he also learnt Hindostani, in both of which tongues he published manuals of piety and grammars. He is said to have protected Englishmen at Goa, but his recommendation of Sir Robert Shirley [q. v.] to another jesuit was held to throw suspicion on Shirley (*Cal. State Papers*, East Indies, 1515-1616, no. 574). Stephens died at Goa in 1619, aged 70.

Three of his books, all published after his death, are extant in the National Library at Lisbon: 1. 'Doctrina Christã em Lingua Bramana-Canarin,' em Rachol, 1622, 8vo. 2. 'Arte da Lingua Canarin,' em Rachol, 1640, 8vo; a copy of this appears to be also extant at Goa, where it was reprinted in 1857, 8vo. 3. 'Discurso sobre a Vinda do Jesus Christo,' Goa, 1626, 1649, and 1654.

F. P.

STEVENSON, ROBERT ALAN MOWBRAY (1847-1900), painter and art critic, was the only son of the Scottish engineer, Alan Stevenson [q. v.], and of Margaret Jones, his wife. He was born at Edinburgh on 28 March 1847, and educated at Windermere and at Sidney Sussex College, Cambridge, where he took no honours, but graduated B.A. in 1871 and M.A. in 1882. He excelled as a gymnast and light-weight athlete; his favourite outdoor exercise was canoeing. His tastes in life were Bohemian, and the family profession did not attract him; but he was deeply interested in all the fine arts, especially the theory and practice. From boyhood he was on terms of affec-

tionate intimacy with his first cousin, Robert Louis Stevenson [q. v.], his junior by three and a half years, who on the critical side of his mind owed much in youth to the stimulating company and influence of his cousin 'Bob.' For a year or two after taking his degree Stevenson continued to live with his widowed mother and sisters at Edinburgh, studying painting at the School of Art in that city. In 1873 he went to continue his studies at the *École des Beaux-Arts*, Antwerp; then in Paris under Carolus Duran, and afterwards for several years at Barbizon and Grez. In 1876 he took with R. L. Stevenson the canoe trip on the Sambre, Meuse, and Somme, which is the subject of the 'Inland Voyage.' His work in landscape painting, exhibited at the Royal Academy and elsewhere, was interesting and competent: but his incapacity for self-assertion and lack of commercial instinct would probably have hampered his career as an artist, even had his executive powers been greater than they were. Theory was his element, and about 1881 (in which year he married Louisa, daughter of Theodore Pyrland, esq.) his friends, foremost among them W. E. Henley, began to urge that he should turn his powers of exposition to practical account. In 1882 he taught a painting-class of undergraduates at Cambridge, in connection with the work of Sidney Colvin as Slade professor. From 1883 to 1889 he contributed much to the 'Saturday Review' as a critic both of painting and music. In 1889 he was appointed professor of fine arts at University College, Liverpool, and, resigning that office in 1893, became for six years the regular art critic of the 'Pall Mall Gazette.' He was also a contributor to the 'Magazine of Art' and to the 'Portfolio' monographs. In the autumn of 1899 his constitution showed signs of breaking up, and he died in his house at Chiswick on 18 April 1900.

None of Stevenson's newspaper criticisms have yet been reprinted. His books published in his lifetime are: 'Engraving,' a translation from 'La Gravure' of Vicomte H. Delaborde, 1886; 'The Devils of Notre Dame' (text to accompany illustrations by Joseph Pennell), 1894; 'Peter Paul Rubens' (reprinted, with additions, from 'Portfolio' monographs), 1898; 'The Art of Velasquez', 1895; 'Velasquez' (the same text revised and expanded in Williamson's series of 'Great Masters'), 1899. An essay on Raeburn, accompanying a volume of reproductions from that master's works, was published posthumously (1900).

Stevenson was the leader of a new school

of art criticism in England. The aims and methods of 'impressionism' found in him a champion of rare brilliancy. At the same time, in dealing with the works of the living, he was scrupulously kind and fair towards other tendencies with which he was less in sympathy. His 'Velasquez' deserves to be a classic. Probably in no other book, English or foreign, is the psychology of artistic vision expounded with so much lucidity and resource, or the nature of the purely pictorial, as distinguished from the literary and historical, appeal of the painter's art set forth in such cogent and attractive words. Yet Stevenson had learned to write with difficulty; his instinctive genius was for talk. In that his illuminating insight, fantasy, humour, and gift of expression played freely, not only over his special subjects, but over the whole field of life and conduct as well as art and letters. R. A. M. Stevenson figures in the writings of his cousin, R. L. S., as 'the Arethusa' of the 'Inland Voyage,' and 'Spring-heel'd Jack' of the essay 'Talk and Talkers;' while his character suggested certain traits in the hero of 'Prince Otto.' In 1900 Professor Walter Raleigh dedicated his volume on Milton 'To R. A. M. Stevenson, whose radiant and soaring intelligence enlightened and guided me during the years of our lost companionship.'

[Personal knowledge and private information; obituary notices in the press.] S. O.

STEWART, SIR DONALD MARTIN (1824-1900), first baronet, field-marshal, governor of Chelsea Hospital, son of Robert Stewart of Forbes and his wife, a daughter of the Rev. Donald Martin, minister of Abernethy in Strathspey, N.B., was born at Mount Pleasant, near Forbes, in 1824. Educated at schools at Findhorn, Dufftown, and Elgin, and at Aberdeen University, where he distinguished himself in classics, he entered the East India Company's military service as ensign in the 9th Bengal native infantry on 12 Oct. 1840. His further commissions were dated: lieutenant 5 March 1841, captain 1 June 1854, brevet major 19 Jan. 1856, brevet lieutenant-colonel 20 July 1858, major (Bengal staff corps) 18 Feb. 1861, brevet colonel 20 July 1863, lieutenant-colonel (Bengal staff corps) 12 Oct. 1866, major-general 24 Dec. 1868, lieutenant-general 1 Oct. 1877, general 1 July 1891, and field-marshal 26 May 1894.

He served in the expeditions against the tribes on the Afghan frontier—the Mohmands in 1854 and the Aka-Khel and Basi-Khel in 1855—was mentioned in despatches and received the medal with clasp. In 1857

he was quartered at Aligarh, where his regiment, the 9th Bengal native infantry, mutinied on 20 May. He then took command of a small body of volunteers sent from Agra to aid in restoring order, and eventually went to Agra, whence he was sent by John Russell Colvin [q. v.] on the perilous duty of carrying despatches to Delhi, for which he had volunteered. He started on 18 June on his famous ride, which forms 'one of the romantic episodes of that heroic year.' On reaching Delhi he was appointed deputy-assistant adjutant-general to the Delhi field force, and served with distinction to the end of the siege and in the capture of the city. He was then appointed assistant adjutant-general to the Bengal army and took part in the siege and capture of Lucknow and in the campaign in Rohilkhand. For his services in the Indian mutiny he was twice mentioned in despatches (*London Gazette*, 15 Dec. 1857 and 28 July 1858) and received the medal with two clasps, and brevet majority and lieutenant-colonelcy.

Stewart continued in the appointment of assistant adjutant-general of the Bengal army until 1862, when he was made deputy adjutant-general and took a prominent part in the reorganisation of the Indian army. In 1867 and 1868 he commanded the Bengal brigade in the expedition to Abyssinia under Sir Robert Napier (afterwards Lord Napier of Magdala [q. v.]) with the rank of brigadier-general. He showed considerable ability in organising the force and in making transport arrangements. He commanded at Senafe throughout the campaign, was mentioned in despatches (ib. 30 June 1868), received the medal, and was made a companion of the Bath. On his return to India he was appointed to the frontier divisional command of Peshawar with the rank of brigadier-general. In July 1869 he was sent by Lord Mayo to the Andaman Islands to reorganise the convict settlement there, a charge which afforded ample scope for his abilities, and which the governor-general hoped would result in the Andaman, Nicobar, and dependencies becoming self-supporting. He was made sole commandant with autocratic powers. The results were so encouraging that Lord Mayo visited the settlements on his return from Burma in 1872, when he was assassinated by a convict. The investigation which ensued showed that Stewart had taken every reasonable precaution to safeguard the governor-general during his visit; nevertheless, Stewart felt the shock of the tragedy so severely that he was obliged to go to Europe on sick leave.

On his return to India in 1875 he was present at the camp of exercise at Delhi in honour of the visit of King Edward VII, then prince of Wales, and in April 1876 was appointed to the command of the Lahore division. In the Afghan war of 1878-80 he was selected to command the Quetta army in October 1878, marched through the Bolan and Khojak passes, dispersed the enemy in a cavalry action at Saif-ud-din, entered Kandahar, and also occupied Kalat-i-Ghilzai and Girishk in January 1879. During the fifteen months he remained at Kandahar the surrounding districts became fairly settled and quiet. For his services he received the thanks of parliament and was made a K.C.B. On 30 March 1880 he set out on his celebrated march to Kabul through a country deserted and without resources, defeated the Afghans at Ahmed Khel on 19 April and at Urzu on 23 April, and reached Kabul on 2 May, taking over the command from Sir Frederick (now Earl) Roberts. His combined force was now styled the Northern Afghanistan field force. Having seen the new amir, Abdur Rahman, formally recognised, Stewart was preparing to leave the country when intelligence reached him at the end of July of the disaster at Maiwand, and he ordered Sir Frederick (afterwards Earl) Roberts with a picked force of ten thousand men to Kandahar to retrieve the position of affairs. He himself returned to India in August with the rest of the troops by the Khaibar route. For his services he received the medal with clasp, the thanks of parliament, the grand cross of the Bath, and was created a baronet. He was appointed military member of the viceroy's council on 18 Oct. 1880, but, on 7 April in the following year, succeeded Sir Frederick Haines as commander-in-chief in India, and occupied the post until the end of 1885, when he returned home. He accepted a seat on the council of India on 16 Dec. 1885, which he held until his death. He was made a companion of the Indian Empire on 24 May 1881, decorated with the grand cross of the star of India on 7 Dec. 1885, and appointed governor of Chelsea Hospital on 9 March 1895. In 1889 he received the honorary degree of D.O.L. from Oxford, and of LL.D. from Aberdeen University. He was a member of the royal commission on Indian civil and military expenditure. He died at Algiers on 26 March 1900. To simplicity of manner and extreme modesty he added the power of plain speaking without giving offence. He was a keen genealogist and an enthusiastic fisherman, and visited Canada frequently for salmon-fishing in the

waters of his old schoolfellow, Lord Mount Stephen.

He married, in 1847, Marina, daughter of Commander Thomas Dymock Dabine, R.N., and niece of General Carpenter, who survived him with two sons and three daughters of the marriage. The eldest son, Norman Robert, the second baronet, born on 27 Sept. 1851, colonel in the Indian staff corps, served with distinction under his father; the second, Donald William, became British resident at Kumasi and was made O.M.G. in 1896.

[India Office Records; Despatches; Army Lists; Burke's Peerage &c.; Times, 27 March 1900; Lord Roberts's Forty-one Years in India; Kaye's Sepoy War; Malleon's Indian Mutiny; Holland and Hozier's Expedition to Abyssinia; Anglo-Afghan War, 1879-80, official account; Forbes's Afghan Wars; Ashe's Kandahar Campaign; Le Mesurier's Kandahar in 1879; Shadbolt's Afghan Campaigns of 1878-80; Men and Women of the Time.] R. H. V.

STEWART, PATRICK (1832-1885), major royal (late Bengal) engineers and temporary lieutenant-colonel, second son of James Stewart (d. 19 Sept. 1877) of Cairnmore, Kirkcudbrightshire, and of his wife Elizabeth (d. 18 April 1872), only daughter of Dr. Gilbert Macleod, East India Company's service, was born at Cairnmore on 28 Jan. 1832. He was educated at Sunderland by Dr. Cowan and at Perry Hill, Sydenham, and entered the military college of the East India Company at Addiscombe in August 1848. He obtained a commission as second lieutenant in the Bengal engineers on 14 June 1850, having passed out of Addiscombe at the head of his term and carried off the Pollock medal. His further commissions were dated: lieutenant 1 Aug. 1854, second captain 27 Aug. 1858, brevet major 28 Aug. 1858.

After the usual course of professional instruction at Chatham Stewart arrived at Calcutta on 13 Oct. 1852. In May 1853 he was appointed acting superintendent of electric telegraphs during the absence of Dr. (afterwards Sir William Brooke) O'Shaughnessy [q. v.] in Europe. The establishment of electric telegraphs in India had just commenced, and Stewart's work was the construction of lines from Calcutta to Lahore and from Agra to Indore, some seventeen hundred miles in length. The energy and rapidity with which he carried it on won great praise. In November 1853 he took up the duty of aide-de-camp to the lieutenant-governor of the North-West Provinces. An ardent sportsman, he had ample opportunities of hunting, and experienced many accidents. Lady Canning ob-

serves on the occasion of one of his frequent visits to Calcutta: 'We have had Lady Selkirk's friend of the electric telegraph here—Lieutenant P. Stewart. He has been mauled by a tiger, hugged by a bear, kicked off by wild asses, and lately had the cholera.'

From January 1854 to July 1856 Stewart was employed in the Punjab on public works. He then again officiated as head of the telegraph department, and was in Ceylon on telegraph business when the mutiny caused him to hasten back to Calcutta. Calling at Madras on 9 June 1857, he found that most important messages for the governor-general had arrived there from the Punjab and North-West Provinces, the line having been cut at Cawnpore. These he took with him by sea to Calcutta, and on his own responsibility ordered the immediate commencement of a coast telegraph line from Madras to Calcutta.

From Calcutta he went on 18 June to Benares and Allahabad, and lent invaluable assistance to Colonel John Neill [q.v.] With two hundred Sikhs and some irregular cavalry he crossed the Ganges and destroyed a rebel stronghold on 25 June, inspected the telegraph line accompanying Major Renaud's force, and returned to Calcutta on 9 July to hurry on the new coast line. A few weeks later he was again at Benares constructing, with the assistance of Lieutenant Limond, R.E., and many thousand native workmen, a fortified position at the Rajghat, which he had himself suggested to Lord Canning. In six weeks' time a position was fortified capable of holding five thousand men if necessary, but easily defended by five hundred. Guns and stores were thrown into it, and Benares was made secure. This important work done, he was back in Calcutta in the middle of September on telegraph duty.

Stewart accompanied Windham's force in October for more than three hundred miles, and went on in advance to arrange for transport [see WINDHAM, SIR CHARLES ASH]. On 2 Nov. he was with Sir Colin Campbell at Allahabad. He was attached to the headquarters staff during the relief of Lucknow, and was mentioned in despatches as having 'made himself particularly useful throughout.' He accompanied Sir Colin to Cawnpore, and took part in the battle of 6 Dec. 1857 and in the pursuit of the Gwalior contingent. On the 8th he returned to Calcutta on urgent telegraph duties, and gave the governor-general a detailed account of the relief of Lucknow. Lord Canning wrote to Campbell: 'I never spent two hours of greater interest. . . . I did not understand

until I saw Stewart the full force of your expression that the garrison had been withdrawn in the face of the enemy.'

On 18 Jan. 1858 O'Shaughnessy, who had returned to India, recorded 'the admiration and gratitude' with which he regarded Stewart's services during his absence—'his indefatigable exertions, almost incessant movements, and the gallant and scientific performance of his duties under every difficulty'—and recommended him for some substantial reward. In spite of bad health Stewart accompanied Canning to Allahabad at the end of January. He was then deputy superintendent of telegraphs, but was attached to the staff of the commander-in-chief in India and given charge of the 'Times' correspondent, Dr. (now Sir) W. H. Russell, who tells us Stewart's duty in a nutshell. It was to put the end of the telegraph wire into Sir Colin's hand wherever he went. No sooner were headquarters established at any spot than the post and the wire were established also. It was the first time that the telegraph had been made to keep pace with the advance of an army in the field, and Stewart had many a narrow escape from the enemy's horse. He was honourably mentioned in the governor-general's order of 5 April 1858 for his services at the siege and capture of Lucknow in the previous month. He received the mutiny medal with clasp and a brevet majority. Ill-health compelled him to return home. In 1859 he was employed in various scientific inquiries in connection with telegraph cables. He married in 1860, and returned to India at the end of this year. In the following year he was employed on a commission to ascertain the cause of the great mortality from cholera, and visited many parts of the country. The report of the commission was rendered in January 1862.

In February 1862 he was sent to Persia in connection with the construction of a proposed telegraph through that country. In June sickness compelled him to leave Teheran, and he went home through Russia. In England he was entrusted with the completion of the arrangements for the Persian Gulf cable. In November 1863 he went to Bombay as director-general of the government Indo-European telegraph, laid the cable from Gwadar to Pao, returned to Bombay, and in August 1864 went to Constantinople and made successful arrangements with the Turkish government. For these services he was made a C.B. The details of his labours are set forth in Sir Frederick Goldsmid's 'Telegraph and Travel,' 1874, which also contains a memoir of his

life and an engraving of his portrait by C. H. Jeans, from a photograph. He died at Misseri's Hotel, Constantinople, on 16 Jan. 1865, and was buried the following day at the Scutari cemetery, where a monument has been raised to his memory. A memorial stained-glass window has been placed in the telegraph library at Karachi and another in the church at Minnigaff, near Newton.

Stewart married in August 1860 Jane (d. 28 Dec. 1895), daughter of Colonel McDonall of Logan, Wigtownshire. There was no issue of the marriage.

H. V.

STEWART, SIR THOMAS GRAINGER (1837-1900), professor of the practice of physic at Edinburgh, son of Alexander Stewart, decorator in Edinburgh, and Agnes, daughter of Hugh Grainger of Gogar Green, was born in Edinburgh on 23 Sept. 1837. He was educated at the high school of Edinburgh and the university of Edinburgh, where he graduated M.D. in 1858. While an undergraduate he was elected one of the presidents of the Royal Medical Society, the highest honour that can be conferred on an Edinburgh medical student or young graduate by his compeers. After graduation he studied medicine in the universities and hospitals of Berlin, Prague, and Vienna under, among others, Virchow, Schülein, Traube, Mayer, and Oppolzer. On his return to Edinburgh he became house physician under Professors John Hughes Bennett [q.v.] and Thomas Laycock [q.v.] in the old infirmary. In 1861 he lectured on *materia medica* and dietetics. In 1862 he was appointed pathologist to the infirmary, and lecturer on pathology at Surgeons' Hall, as well as a physician to the sick children's hospital. In 1866 he was elected a fellow of the Royal Society of Edinburgh. During these early years Stewart worked incessantly, made observations of real and permanent value on the symptoms and pathology of waxy kidney, and wrote papers on various kidney conditions, on dilatation of the bronchi, on acute atrophy of the liver, and on other subjects. In 1869 he also published 'A Practical Treatise on Bright's Disease of the Kidneys,' which has passed through two editions in England and two in America. Unsuccessful in his appli-

cation for the chair of pathology in 1869—obtained by Professor William Rutherford Sanders [q.v.]—he resigned his appointments to fill the posts of junior ordinary physician in the infirmary and lecturer on clinical medicine. His clear and painstaking method of lecturing, and the kindly interest he took in their work, soon led to a large increase in the number of his students. In 1873 he began to lecture on the practice of physic in the extramural school, and at once became the most popular teacher on medicine outside the university walls, introducing many practical improvements in the methods of instruction. In 1876 he devoted himself exclusively to teaching and consultation work. In the same year, on the death of Professor Laycock, his success in the arena of extramural competition had been so marked that he was appointed professor of the practice of physic in Edinburgh University—the blue ribbon of medicine—becoming also one of the professors of clinical medicine, with wards in the royal infirmary, of which he was afterwards, for many years senior physician. As professor, Stewart at once showed himself to be one of the most brilliant lecturers in the university. In consultation work he had one of the largest practices in Scotland, and on many occasions he was called to cases abroad.

In 1878 Stewart was president of the section of medicine at the meeting of the British Medical Association at Bath, and at the International Medical Congress in London in 1881 he introduced the discussion in the department of medicine on 'The Morbid Histology of the different Forms of Bright's Disease.' In 1882, on the death of Sir Robert Christison [q.v.], he was appointed physician-in-ordinary to Queen Victoria in Scotland. In 1887 he received the honorary degree of M.D. from the Royal University of Ireland, was elected an honorary fellow of the Royal College of Physicians of Ireland, and also obtained the honorary degree of M.D. of the university of Dublin. In 1892 he was elected an honorary fellow of the College of Physicians of Philadelphia. He was president of the Royal College of Physicians of Edinburgh (of which he was a fellow) from 1889 to 1891, and for two years was also president of the Edinburgh Medico-Chirurgical Society. In 1894 he was knighted, and later in the year he addressed the British Medical Association at Bristol on 'Influenza.' In 1897 he received the degree of LL.D. from Aberdeen University, and in 1898 he acted as president of the British Medical Association at Edinburgh. In 1899 he went as representative of Edinburgh University to the Berlin

congress on tuberculosis, of which he was appointed one of the vice-presidents, and at which the veteran Virchow introduced him as 'mein berühmtester Schüler.' He died at Edinburgh on 3 Feb. 1900, and was buried in the Dean cemetery.

Sir Thomas married (1), in 1868, Josephine Dubois, daughter of Charles Anderson of Riverhead, Jamaica (she died 1884); and (2), in 1866, Jessy Dingwall Fordyce, daughter of the Rev. Robert Macdonald, D.D., who, with four sons and four daughters, survived him.

As a clinical teacher Stewart was clear and systematic, and conducted his class by means of question and answer, while the students in rotation listened to abnormal sounds in the patient's chest or otherwise examined him. As a lecturer he was equally lucid and precise, with a marvellous faculty of going straight to the main point in each case, so that his doctrine was easily followed and understood even by the junior student. He was a man of wide and general culture, and devoted much of his spare and holiday time to the study of Scottish history and archaeology. His greatest effort in pure literature was 'The Good Regent: a Chronicle Play'—a drama on the subject of the Regent Moray, published in 1898. He had previously contributed fugitive verses and translations to different periodicals. He was an excellent vocalist and raconteur, was endowed with a fine presence, and had a gift of ready and graceful speech. He took a foremost part in founding and organising the Medical Students' Association, and was president for two terms of the Medical Missionary Society, in which he was keenly interested. His views on diseases of the kidneys have generally been accepted by the medical profession at home and abroad, and his work on this subject is a very able and consistent attempt to set in a clear light the involved and difficult questions connected with the pathology of Bright's disease. Stewart was also one of the first in this country to draw attention to the deep reflexes in neuritis, and under the title of 'Paralysis of the Hands and Feet from Disease of the Nerves' he described the condition now known as 'multiple neuritis.' Long before the reign of cerebral surgery had set in, he induced Professor (afterwards Lord) Lister to perform operations on the brain for traumatic epilepsy. His lectures were largely quoted on the continent, and several of them were translated into French, German, and Russian. That on 'Albuminuria' was at the date of his death used as a text-book in several of the German universities.

In addition to the works mentioned and a

large number of papers and lectures, chiefly on the nervous system, the lungs, and the liver, as well as the Harveian oration, 'Notes on Scottish Medicine in the Days of Queen Mary,' reprinted in 'Blackwood's Magazine,' cliii. 886-902 (June 1898), Sir Thomas wrote: 1. 'On the Position and Prospects of Therapeutics,' Edinburgh, 1868, 8vo. 2. 'An Introduction to the Study of the Diseases of the Nervous System,' Edinburgh, 1884, 8vo. 3. 'Clinical Lectures on Important Symptom: on Giddiness,' Edinburgh, 1884, 8vo (republished in 1898 with emendations and additions, and title, 'Lectures on Giddiness and on Hysteria in the Male'). 4. 'Clinical Lectures... Fasciculus II., on Albuminuria,' Edinburgh, 1888, 8vo. 5. Chapters on 'Spastic Paraplegia,' 'Friedreich's Ataxia,' and 'Hereditary Cerebellar Ataxia,' in vol. vii. of Allbutt's 'System of Medicine,' 1899, and several articles on Bright's disease and other subjects to Quain's 'Dictionary of Medicine' (new ed. 1894).

[Lancet, 10 Feb. 1900, pp. 412-5 (with portrait); British Medical Journal, 10 Feb. 1900, pp. 336-339 (with portrait); Edinburgh Medical Journal, March 1900, pp. 307-8; Student (Edinburgh), xiv. 266-71 (new ser.) (with portrait); Men of the Time; Scotsman, 5 Feb. 1900; private information.] G. S.-x.

STOKES, GEORGE THOMAS (1843-1898), Irish ecclesiastical historian, was the eldest son of John Stokes of Athlone by Margaret Forster his wife, and was born in that town on 28 Dec. 1843. He was educated at Galway grammar school, Queen's College, Galway, and at Trinity College, Dublin, where he graduated B.A. in 1864. He subsequently proceeded M.A. 1871, B.D. 1881, and D.D. 1886. In 1866 Stokes was ordained for the curacy of Dunkerrin in the diocese of Killaloe in the then established church of Ireland, and in the following year was appointed to the curacy of St. Patrick's, Newry. In 1868 he was nominated first vicar of the newly constituted charge of All Saints, Newtown Park, co. Dublin, which he held till his death. In 1893 he was elected by the chapter of St. Patrick's Cathedral, Dublin, to the prebend and canonry of St. Andrew.

Stokes early exhibited a taste for historical and antiquarian research, and from the first exhibited in its pursuit not merely an acute-ness which was much beyond the ordinary, but a capacity for presenting the results of his investigations in a picturesque and striking form. From the date of his appointment to All Saints his leisure was devoted to these interests, which, however, were in his case almost invariably subordinated to the illumination of the ecclesiastical history

of his own country. His gifts in this latter direction led to his selection by Dr. Reichel as his deputy in the chair of ecclesiastical history in the university of Dublin; and in 1883, on the termination of his principal's period of office, Stokes was appointed his successor. The appointment was brilliantly justified, and it soon appeared that in selecting a professor the university had produced an historian. The fruit of his labours was quickly manifest in his 'Ireland and the Celtic Church,' published in 1886, which achieved an immediate success. This was followed in 1888 by his 'Ireland and the Anglo-Norman Church,' in which the history of Irish Christianity was traced through a further stage.

Stokes intended to continue the history of the Irish church down to modern times, but his scheme was interrupted by the laborious task of producing for the 'Expositor's Bible' his 'Commentary on the Acts of the Apostles' (1891). This work, which ranks among the most valuable contributions to the series in which it appeared, displays in a marked manner Stokes's literary talent. He succeeded in interesting lay people in the historical criticism of the New Testament, and in conveying to them the latest results of such criticism in a popular form.

From 1880 onwards Stokes's indefatigable industry had enabled him to add largely, and in many directions, to the more important productions of his pen above enumerated. In 1887 he published, as the second volume of a 'Sketch of Universal History,' a 'Sketch of Mediæval History.' In 1891 he published an edition of Bishop Pococke's 'Tour in Ireland' [see POCKOCK, RICHARD]. He was an occasional contributor on subjects connected with theology and ecclesiastical history to the 'Contemporary Review.' Among his many articles in this periodical, that on 'Alexander Knox and the Oxford Movement' is perhaps the most important (August 1887); and he produced numerous papers before the Royal Society of Antiquaries in Ireland, and the Royal Irish Academy. In 1887 he was appointed librarian of St. Patrick's Library, in Dublin, a position peculiarly congenial to his tastes. In spite of those varied labours he never neglected his clerical duties. In 1895 he was temporarily disabled by a partial stroke of paralysis, from the effects of which he never fully recovered. In 1896 he delivered a series of lectures entitled 'How to write a Parochial History,' in which he strove to imbue his divinity students with something of his own enthusiasm for antiquarian learning; and in the following year he commenced an instructive course of lectures on 'Great Irish Church-

men of the Seventeenth and Eighteenth Centuries,' which he did not live to complete; they were edited, under the title 'Some Worthies of the Irish Church' (London, 1900), after his death by the Rev. H. J. Lawlor, who succeeded to his professorial chair. On 24 March 1898 Stokes succumbed, after a brief struggle, to an attack of pneumonia. He was buried at Dean's Grange, co. Dublin. Stokes was twice married: first, to Fanny, daughter of Thomas Pusey of Surbiton, Surrey, and secondly to Katherine, daughter of Henry J. Dudgeon of the Priory, Stillorgan, co. Dublin.

In addition to his works above enumerated Stokes published: 'The Work of the Laity of the Church of Ireland,' 1869; various articles in Smith's 'Dictionary of Christian Biography,' 1880-7; and, in conjunction with the Rev. C. H. Wright, a translation of 'The Writings of St. Patrick' (Dublin, 1887, 8vo).

It is upon Stokes's two volumes on the early history of the church in Ireland that his fame must mainly rest. His had a peculiar talent for finding out the interesting things in history; and, while his knowledge of his subject was as minute as it was wide, he knew how to discard the unessential.

[Preface to the Journal of the Royal Society of Antiquaries of Ireland, pp. v-viii; Athenæum, 2 April 1898; private information.] C. L. F.

STOKES, MARGARET M'NAIR (1832-1900), Irish archæologist, eldest daughter of William Stokes, M.D. [q. v.], and Mary, daughter of John Black of Glasgow, was born at York Street, Dublin, in March 1832. Sir William Stokes [q. v. Suppl.] was her brother. At her father's house she was thrown in early girlhood into daily intimacy with James Henthorn Todd [q. v.], George Petrie [q. v.], William Reeves (1815-1892) [q. v.], Sir Samuel Ferguson [q. v.], Edwin R. W. Quin, third earl of Dunraven [q. v.], and others of her father's antiquarian friends, from whom she early derived the taste for archæological investigation which became the absorbing passion of her later years. Her aptitude in this direction was stimulated also by the careful training of her father, from whom she received precisely such a training as might best fit her for the work she was afterwards to accomplish. But while her taste for research was thus precociously developed, it was not until she had passed middle age that her real services to Celtic art and archæology were rendered, her early life being fully occupied with home duties. Thus it was not until death had removed those to whom she ministered that

she found leisure to 'commence author; and, as she was wont to say of herself in her last years, she 'only came out at fifty.'

Miss Stokes's first important work was undertaken with no thought of publication, and was indeed the chance outcome of her friendship and admiration for Sir Samuel Ferguson. It took the form of illustrations and illuminations of Ferguson's poem, 'The Cromlech on Howth,' the text of which she adorned with admirably illuminated initial letters after the examples in the book of Kells. Her reproductions were so generally admired that it was arranged to publish an illustrated edition of the poem, which accordingly appeared in 1861. Sir Frederic Burton [q. v. Suppl.], referring to this book shortly after its publication, wrote of Miss Stokes's share in the volume: 'The initial letters are exquisite, and form in themselves quite a manual of Scoto-Celtic ornamentation.' The capacity and knowledge of Celtic art shown in this work led to Miss Stokes undertaking the editorship of the Earl of Dunraven's monumental volumes entitled 'Notes on Irish Architecture' [see QUIN, EDWIN RICHARD WINDHAM WYNDHAM-, third EARL OF DUNRAVEN]. She had previously visited the Isles of Aran and other remote parts of Ireland still rich in archaeological remains, in company with her father, Petrie, and Lord Dunraven. Dunraven, dying before he could complete his projected work, left a substantial bequest to defray the expenses of the publication of his 'Notes' by Miss Stokes. To these volumes, which appeared in successive years (1876-7), the editor contributed many drawings and illustrations.

The next few years were fruitful in editorial labours less elaborate, but scarcely less valuable. Among other productions may be enumerated 'Christian Inscriptions in the Irish Language, chiefly collected and drawn by G. Petrie, 1871-8, and an English edition of Didron's 'Christian Iconography' (2 vols. 1880). She also published 'Early Christian Architecture in Ireland,' 1878; and 'Art Readings for 1880,' being lectures to ladies at Alexandra College. In 1886 she wrote for the South Kensington series of handbooks the volume on 'Early Christian Art in Ireland.' In the latter year she contributed to 'Blackwood's Magazine' a notice of her lifelong friend, Sir Samuel Ferguson. By this time Miss Stokes's position and reputation in her special field of learning was assured; and while her name and work thenceforward became known among a wider public, the sphere of her investigations became enlarged. In 1892 she pub-

lished 'Six Months in the Apennines: a Pilgrimage in search of Vestiges of the Irish Saints in Italy,' in which she has traced the wandering footsteps of the early Irish missionaries, and has illustrated with pen and pencil the localities associated with S. Columbanus. In 1895 she followed this up with 'Three Months in the Forests of France,' a work devoted to the same topics. In the same year was published her 'Notes on the Cross of Cong,' with elaborate reproductions of that remarkable relic. On all these works Miss Stokes laboured with extraordinary enthusiasm and scholarly zeal. No trouble was too great for her; and, though well advanced in life, she journeyed long distances, and went through severe physical exertion to secure success in her photographic and other reproductions of the ancient ecclesiastical monuments of Ireland, by means of which she sought to elucidate the growth of Celtic art. The marked success of her methods led to her undertaking the large task of illustrating 'The High Crosses of Ireland.' On this work she was busily engaged when the brief illness which terminated her life overtook her. An instalment of it, on the 'High Crosses of Castledermot and Darrow,' was published in 1898 under the auspices of the Royal Irish Academy, a body of which Miss Stokes had been elected an honorary member in 1876. A further instalment, embracing all that she lived to complete, will shortly be published by the Academy. Miss Stokes was also an honorary member of the Royal Society of Antiquaries of Ireland.

Miss Stokes died at her residence, Carrig Breac, Howth, co. Dublin, on 20 Sept. 1900.

[Notices in the Dublin Daily Express, 22 Sept. 1900; Athenæum, 29 Sept. 1900; Life and Letters of Sir Samuel Ferguson; private information; Journal of the Royal Society of Antiquaries of Ireland, vol. xxx. p. vii.] O. L. F.

STOKES, SIR WILLIAM (1839-1900), surgeon, was second son of Dr. William Stokes (1804-1878) [q. v.] and Mary, second daughter of John Black of Glasgow. Margaret Stokes [q. v. Suppl.] was his sister. He was born at 50 York Street, Dublin, on 10 March 1839, and was educated at the royal school, Armagh, and at Trinity College, Dublin, where he graduated B.A. in 1859, and M.B., M.D., and M.Ch. in 1863, with a thesis on 'The Diseases and Injuries of the Knee-joint.' Stokes received his professional training at Dublin, in the school of physic at Trinity College, in the Carmichael school, and at the Meath and Richmond hospitals. He was awarded the gold medal of the Pathological Society of Dublin in 1861, be-

coming its president in 1881. He was admitted a licentiate of the Royal College of Surgeons of Ireland in 1862, and a fellow of this body in 1874. After he had received his medical qualifications in Dublin he spent two years in Paris, Berlin, Vienna, and Prague, where his father's reputation procured him the personal friendship of the most renowned teachers in those cities.

In 1864 Stokes settled in practice in Clars Street, Dublin, where he remained until 1878, when he moved to his father's house, 5 Merrion Square North. In 1864 he was elected surgeon to the Meath Hospital, in succession to Josiah Smyly. This post he resigned in 1868, upon his appointment as surgeon to the House of Industry Hospitals (which included the Richmond Hospital); there he performed the greater part of the operative work, which justly placed him at the head of the surgical profession in Ireland. He was for some time lecturer on surgery in the Carmichael school of medicine, and on 21 Dec. 1872 he was elected professor of surgery at the Royal College of Surgeons of Ireland. Here he served the office of president in 1886-7, when he gave a magnificent banquet in the hall of the college to celebrate the jubilee of Queen Victoria. In 1882 Stokes delivered the address on surgery at the jubilee meeting of the British Medical Association held at Worcester, its birthplace. The address confirmed the opinion that had long been held as to the greatness of his oratorical powers. In 1886 he was knighted by the Earl of Aberdeen, then lord-lieutenant of Ireland. In 1888 he returned to the Meath Hospital as surgeon, resigning a similar position at the Richmond Hospital, and in 1892 he was appointed surgeon-in-ordinary to Queen Victoria in Ireland.

Stokes was a governor of the Westmoreland Lock Hospital, a consulting surgeon to the National Children's Hospital, a member of the council of the Royal College of Surgeons of Ireland, and he was for a number of years one of the representatives of the college on the conjoint committee which managed the examinations conducted by the College of Physicians and the College of Surgeons in Dublin. He took much interest in the Royal Academy of Medicine, and for many years occupied a seat on the surgical council of the society, in addition to the position he held as secretary for foreign correspondence. Stokes also acted at various times as an examiner in surgery at the university of Oxford, at the Queen's University in Ireland, and at the Royal Colleges of Physicians and Surgeons in Dublin.

Early in 1900 Stokes left Ireland for South Africa, to assume the office of consulting surgeon to the British military forces, which were then engaged in Natal in fighting against the Boers. While still actively occupied with the duties of that responsible office he fell ill and died of pleurisy on 18 Aug. 1900, in the base hospital at Pietermaritzburg. He was buried two days afterwards in the military cemetery at Fort Napier, Natal.

He married, in 1869, Elizabeth, daughter of the Rev. John Lewis Moore, D.D., senior fellow and vice-provost of Trinity College, Dublin, by whom he had one son, who became an officer in the royal engineers, and two daughters.

Stokes, like many other members of his distinguished family, was a man of the utmost versatility. A good surgeon and a first-rate teacher, he was also an orator and a master of English composition. He was besides a cultivated musician, possessed of a fine tenor voice, which was often heard in private society at Dublin. As a surgeon he was both brilliant and successful, and his name is associated with a particular method of amputation at the knee, which has the merit of leaving untouched the insertion of the great quadriceps muscle.

Stokes published a life of his father, Dr. William Stokes, in the 'Masters of Medicine' series, London, 1898. His other writings are scattered in the various medical periodicals.

[Sir Charles Cameron's History of the Royal College of Surgeons in Ireland; private information.] D'A. P.

STRACHEY, SIR HENRY, first baronet (1738-1810), politician, born at Edinburgh on 23 May 1738, was the eldest surviving son of Henry Strachey (1708-1765) of Sutton Court in Somerset, by his first wife Helen, daughter of Robert Clerk of Listonfield, Midlothian, and Edinburgh, physician.

His grandfather, JOHN STRACHEY (1671-1743), geologist, was the only son of John Strachey (d. 4 Feb. 1674), the friend of Locke (cf. Fox Bourne, *Life of John Locke*, 1876). He was the author of 'Observations on the different Strata of Earths and Minerals' (London, 1727, 8vo), which, according to Sir Charles Lyell [q. v.], was the first treatise in which the theory of stratification was suggested. He was elected a fellow of the Royal Society on 5 Nov. 1719, and died on 11 June 1743. He was twice married—first to Elizabeth, daughter of William Elletson; and secondly to Chris-

tiana, daughter of Richard Staveley. He had issue by both marriages.

His grandson Henry, on the recommendation of George Grenville [q. v.], was appointed private secretary to Lord Clive during his last visit to India in 1764. Clive afterwards spoke of his abilities in the highest terms in the House of Commons on 30 March 1772. On 5 Dec. 1768 he was returned to parliament for Poutefract, and on 10 Oct. 1774 for Bishop's Castle in Shropshire, one of Clive's boroughs. This seat he vacated in 1778 on being appointed clerk of deliveries of ordnance, and was returned on 1 Oct. for Saltash. In 1780 he accepted the Othltern Hundreds, and on 28 June was again returned for Bishop's Castle in place of Alexander Wedderburn (afterwards first Earl of Rosslyn) [q. v.] This seat he retained until 1802, when he was returned on 7 July for the Sussex borough of East Grinstead, which he represented until his retirement in 1807.

In 1774 Strachey was appointed secretary to the commission for restoring peace to America, and from October 1780 to April 1782 he was principal storekeeper of the ordnance. From 20 March to 15 July 1782 he was joint secretary of the treasury. In the same year he became joint under-secretary of state for the home department, and in the negotiations for peace with the American colonies at Paris in 1783 he assisted the king's commissioners (see HODGKINS, *British and American Diplomacy affecting Canada*, 1900). In that year he was again storekeeper of the ordnance from 12 April to December, and in 1784 master of the king's household. In 1801 he was created a baronet. He was a fellow of the Society of Antiquaries. He died in London on 1 Jan. 1810 in Hill Street, Berkeley Square. On 28 May 1770 he married Jane, only daughter of John Kelsall of Greenwich, and widow of Thomas Latham, captain in the royal navy. She died on 12 Feb. 1824, leaving three sons and a daughter. The second son, Edward (1774-1832), and his wife Julia (d. 20 Nov. 1847), youngest daughter of Major-general William Kirkpatrick [q. v.], were friends of Thomas Carlyle (FROUDE, *Life of Carlyle*; CARLYLE, *Reminiscences*, ed. Froude).

[Gent. Mag. 1810, i. 98; Official Ret. Memb. of Parl.; Burke's Peerage; Sir A. J. Arbuthnot's *Lord Clive*, 1900 (Buildere of Greater Britain).] E. I. C.

STRUTHERS, SIR JOHN (1823-1899), anatomist, second son of Alexander Struthers, was born at Brucefield, Dunfermline,

on 21 Feb. 1823, and was educated privately. He studied medicine in Edinburgh, where he was admitted successively a licentiate and a fellow of the Royal College of Surgeons and a doctor of medicine of the university in 1845. On 22 Oct. 1847 he was licensed by the Royal College of Surgeons to teach anatomy in the extramural school, which he did so successfully that he was invited to supply the place of Professor John Goodsir (1814-1867) [q. v.] during his illness in the winter of 1863-4.

In 1854 Struthers was appointed one of the assistant surgeons to the Royal Infirmary, and a few years later he became full surgeon, an office he resigned in 1863, when he was appointed to the chair of anatomy at Aberdeen. The university of Aberdeen had begun a new existence on 15 Sept. 1860 by the fusion of the two old universities, and by the new scheme law and medicine were taught in Marischal College. The accommodation, however, was meagre, and the students were few, when Struthers entered on his duties; but when he left the university in 1889 the number of students had more than doubled, and there was a museum of anatomy which was almost unequalled, while the Royal Infirmary had been greatly enlarged, and was famous throughout the United Kingdom for the excellence of its clinical teaching. In 1881 Struthers established a medal and a prize for anatomy in the university of Aberdeen, and in 1889 he resigned his post and returned to Edinburgh.

In Edinburgh he became chairman of the board of directors of Leith Hospital, and worked hard to secure its extension to a hundred beds to satisfy the academic teaching requirements. He was also elected a manager of the Edinburgh Royal Infirmary, where he was particularly interested in the improvement and extension of the operating theatres.

Struthers was a member and president of the Royal Physical Society, and a member of the board of management of the Royal Dispensary, Edinburgh. In 1885 the university of Glasgow conferred upon him the honorary degree of LL.D. He was president of the Royal College of Surgeons of Edinburgh from 1895 to 1897, and has then proved a great benefactor to the museum. He remained a vice-president and an examiner of the college until his death. He was a member of the General Medical Council for the united universities of Edinburgh and Aberdeen from 1883-8, and for the university of Aberdeen alone from 1888-91. He served in this body as chairman of the education com-

mittee, and in this capacity drew up a report which led to important changes in the medical curriculum. He was knighted in 1898.

He died on 24 Feb. 1899, and is buried in the Warriston cemetery, Edinburgh. In 1892, after his retirement from the chair of anatomy in Aberdeen, he was presented by a number of old pupils and friends with his portrait painted by Sir George Reid, P.R.S.A. A replica hangs in the new picture gallery of the Marischal College, Aberdeen. He married, on 5 Aug. 1857, Christina, a daughter of James Alexander, surgeon, of Wooler, Northumberland, by whom he had five sons and four daughters.

Struthers was a skilled anatomist, and one of the earliest advocates in Scotland of the Darwinian hypothesis of natural selection. He was by nature a reformer and an organiser, and to his exertions the university of Aberdeen owes in great measure the success of her medical school.

Struthers wrote a large number of papers on human and comparative anatomy. In a pamphlet entitled 'References to Papers in Anatomy,' published in 1889, he gives a list of seventy papers which he had written up to that date, and he subsequently added several more. The most valuable part of his scientific work is a series of papers on the anatomy of various cotaceans. He also published a book of 'Anatomical and Physiological Observations,' part i. 1854, part ii. 1863; and an 'Historical Sketch of the Edinburgh Anatomical School,' 1867, 8vo.

D'A. P.

STUART, JOHN PATRICK ORCHILTON, third Marquis of Bute (1847-1900), was born at Mount Stuart, Isle of Bute, on 12 Sept. 1847, and had the courtesy title of Earl of Windsor till his father's death in the following year. He was the only child of John, second marquis, K.T., by his (second) wife, Sophia Frederica Christina, daughter of Francis, first marquis of Hastings, and his wife Flora, who in her own right was Countess of Londonderry. John Stuart, third earl of Bute [q. v.], prime minister, was his great-great-grandfather. The prime minister's eldest son was created marquis of Bute in 1796, and was succeeded in the marquessate by his grandson, the father of the subject of the present memoir. The second marquis, who, in right of his mother, Elizabeth Penelope, daughter and heiress of Patrick Ormiston, earl of Dumfries, was also Earl of Dumfries, died on 18 March 1848. The boy's mother, with whom he as a child

travelled much abroad, died on 28 Dec. 1859, and on 25 May 1861 the court of session, in obedience to an order from the House of Lords in its judicial capacity, authorised the removal of the boy into England in the hands of a guardian appointed by the English court of chancery (*Session Cases*, 2nd ser. (Dunlop), xxiii. 902). The lord-chancellor (Campbell) recorded in his judgment that the boy gave promise of considerable intellectual capacity. In January 1862 the marquis entered Harrow, wherein 1863 he gained the head-master's prize for English verse, and in the following year the head-master's fifth-form prize for Latin verse (*Harrow Calendars*). In 1865 he entered Christ Church, Oxford, where he left a reputation for wide reading, active intellect, and vast power of memory.

The marquis had been brought up by his mother as a presbyterian of the church of Scotland. But at an early age his attention was directed to the institutions of medievalism, and at Oxford he devoted much time and thought to the study of the ancient faiths and forms of eastern and western Christendom, of Judaism, Islamism, and Buddhism. On 8 Dec. 1868, a few months after attaining his majority, he was received into the church of Rome, at the chapel of the Sisters of Notre Dame, Southwark, by Monsignor Capel. To the church of his choice he was always deeply devoted. His change of religion created a profound sensation, especially in Scotland. The incident doubtless suggested the plot of Lord Beaconsfield's novel, 'Lothair,' which was published in 1870, although the novel has no relation with the facts of Bute's career. Beaconsfield made Bute's acquaintance afterwards, and they remained on friendly terms until Beaconsfield's death.

Bute engaged in an exceptional number of pursuits. Besides taking the general superintendence of his vast property, he was a scholar and restorer of ancient buildings, a liturgiologist, a linguist, and a traveller, but the dominant character of his mind, to which his actions were referable, was his devotional temperament and his reverence for ancient institutions.

On coming of age Bute became the owner of estates, not only in Scotland but in Wales—at Cardiff and its neighbourhood.

Cardiff, as one of the principal ports of the United Kingdom, and the largest coal-exporting port in the world, practically owes its existence to the foresight and expenditure of the marquis's father. The Bute docks, which his father began, he carried to completion with the same courage and in-

telligence; they now cover over 160 acres, and cost about 4,000,000*l*. The population of the city, which in 1801 was two thousand, is now over one hundred and sixty thousand. He likewise sought to revive the cultivation of grapes in Wales in order to reintroduce the industry of native wine-making into the country. In 1877 he planted vineyards on his Welsh estates at Castel Coch and Swanbridge. They produce both red and white wines, and much care has been bestowed on developing the manufacture.

In 1890 he accepted the offer of the office of mayor of Cardiff, being the first to restore the ancient association of peers with civic office. After fulfilling the duties of the post for the ordinary term, he presented to the corporation on his retirement an artistic chain of office, for the perpetual use of his successors. He was also president of University College, Cardiff. He was interested in Welsh literature and history, on which he gave an address at the Eisteddfod of 1892, and restored his Welsh residences, Cardiff Castle and Castel Coch, besides recovering, through his explorations, the remains of the Greyfriars' and Blackfriars' houses at Cardiff, the outlines of which he marked out by low walls, flooring the interiors with tiles.

Though the House of Lords, sitting as a judicial body, had assumed him in boyhood to be English, he piqued himself on being a Scot. 'I well remember,' he writes in his diary, 'reading Grant's "Memorials of Edinburgh Castle" as a child, and its first raising in me a strong nationalist feeling.' This feeling strengthened until in later years (although in other matters he identified himself with the conservative party) he advocated Scottish home rule by a single chamber somewhat similar in its constitution and relations to the crown to the old Scots parliament before the union. These views he expounded in an essay called 'Parliament in Scotland,' which first appeared in the 'Scottish Review' in 1889 (published separately 1889, 1892, and 1893). He made a long and extensive study of Scottish history and institutions, but such small parts of the results of his researches as he printed he issued in the form of detached magazine articles, contributions to the 'Transactions' of learned societies, lectures, or pamphlets. They included a lecture on the 'Early Days of Wallace' (Paisley, 1876), and on 'David, duke of Rothesay' (Edinburgh, 1894), several articles on the coronations of Scottish kings in the 'Scottish Review' (1887-8), and 'An Itinerary of King Robert I., an

article in the 'Scottish Antiquary' (1899), which was intended to form part of a series of diaries of the movements of all the Scottish kings. His longest contribution to Scottish history, published during his life, was the large quarto volume on heraldry, in the preparation of which he was aided by Mr. J. R. N. Macphail and Mr. H. W. Lonedale, viz., 'The Arms of the Royal and Parliamentary Burghs' (Edinburgh, 1897).

Anxious to retain or restore, as far as was practicable, the ancient order of things in Scotland, he deeply interested himself in the Scottish universities and was a munificent benefactor of St. Andrews, the most ancient of them, and of Glasgow. He was an active member of the Scottish Universities Commission in 1889, and was elected rector of St. Andrews in 1892, holding the office until 1898 through two successive terms. He presented to St. Andrews a medical hall, a chair of anatomy, a hall for the students' union, &c., and to Glasgow, the next in order of age, a university ('Bute') hall. His address (23 Nov. 1893) to the students of St. Andrews on his first election as rector of that university (which was published at Paisley in 1893, and reissued in 'Rectorial Addresses,' ed. Knight, in 1894), contained, according to Lord Rosebery, 'one of the strangest, most pathetic, and most striking passages of eloquence with which I am acquainted in any modern deliverance' (EARL OF ROSEBURY, Address to Scottish Hist. Soc. 17 Nov. 1900; *Scotsman*, 19 Nov. 1900). He received the honorary degree of LL.D. from the university of Glasgow in 1879, of Edinburgh in 1882, and of St. Andrews in 1893. At the same time he took part in the municipal life of Scotland. Like five of his ancestors, he became provost of Rothesay from 1896 to 1899, and embellished the council chamber there with portraits and stained-glass windows, and to that borough as well as to St. Andrews and Falkland, with which he had a like territorial connection, he presented gold chains of office for the provost. In 1891 the freedom of the city of Glasgow was conferred on him, and he was lord-lieutenant of the county of Bute from 1892. When the British Archaeological Association met at Glasgow in 1888 he filled the presidential chair and delivered the inaugural address 'On Scottish History.' The following are the principal edifices which he repaired or had in course of restoration at his death: the royal castles of Rothesay and Falkland, of both of which he was hereditary keeper; the Old Place at Mochrum, Orichton Peel at Sanquhar, the priories of St. Andrews and Pluscarden, the

Greyfriars at Elgin, St. Blanes Chapel in the Isle of Bute. The present palatial house at Mount Stuart, Buteshire, designed in a Florantine style, under his supervision, by Dr. R. R. Anderson, stands on the site of the former house of the same name, which was burnt down on 8 Dec. 1877.

Bute travelled widely, frequently visiting the Holy Land and Italy. He systematically studied the languages of the countries in which he stayed, both ancient and modern. Hebrew, Coptic, and Arabic greatly attracted him. He published in 1882 'The Coptic Morning Service translated into English, with the original Coptic of the parts said aloud,' and in 1891 'The Ancient Language of the Natives of Teneriffe,' which he first gave as an address at Cardiff.

But his most absorbing literary occupation dealt with the liturgy of the Roman catholic church. Within two years of his conversion to the Roman church he began the work with which his name will be chiefly identified—the English translation of the 'Breviary,' which, after the most assiduous labour, he completed in some nine years. It was published at Edinburgh in 1879 in two volumes octavo. In the preface he announced his aim to have been 'to reflect the ideas of the Latin in the best English mirror he could command.' 'In cases where the Latin of passages from the Bible is obscure . . . the original [in whatever language, Hebrew, Chaldee, or Greek] has been referred to when possible, in order to find out what the Latin is probably intended to mean.' Where it was possible to adopt the classical English of the 'authorised version,' he did so. The Latin hymns of the 'Breviary' appear in the form of metrical paraphrases by Drs. Neale, Newman, Littledale, Caswall, &c., and two—not the least beautiful of them—by Bute himself. He added to his translation a considerable number of critical and historical notes. From a literary point of view the English 'Breviary' is an excellent and lasting monument to its author. It was soon out of print, and much of its author's time in the latter part of his life was occupied in preparing a new edition of it, which appeared after his death.

In 1875 Bute began to issue translations of the orders of service for the greater church festivals. Several of these he lived to complete, with other translations of a similar kind, such as 'Form of Prayers' in English for the use of catholics who are unable to attend mass (1896, new ed. 1900), and the services for Christmas Day (Glasgow, 1875), Palm Sunday and Whitsuntide (both London, 1898). He is said to have taken a large

part in the preparation of a projected 'Proprium Sanctorum' for Scotland, which is under the consideration of the congregation of sacred rites at Rome, the office for St. Columba being mainly, if not wholly, from his own pen. 'The Altus of St. Columba,' with a prose paraphrase and notes, he published at Edinburgh in 1882 (sm. 4to). On all matters relating to liturgy, ritual, religious symbolism, church architecture, church antiquities, church history, and the canon law, he was an expert scholar, and was constantly a referee. Works on these subjects were frequently issued at his expense, and among the chief examples of this form of his munificence are: 'Registrum Monasterii S. Marie de Cambuskenneth, A.D. 1147-1535,' Edited by Sir William Fraser, K.C.B., Edinburgh, 1872, 4to; presented to the Grampian Club; 'Acta Sanctorum Hiberniæ ex Codice Salmanticensi nunc primum integre edita opera Caroli de Smedt et Josephi de Backer e Soc. Jesu hagiographorum Bollandianorum,' Edinburgh, 1888, 4to; 'The Charters of the Friars Preachers of Ayr,' 4to; presented by him to the Ayr and Wigton Archaeological Society; 'Ordinale Conventus Vallis Caulium: the Rule of the Monastic Order of Val-dos-Choux in Burgundy,' by W. de Gray Birch, LL.D., London, 1900, 8vo. There were also in preparation at Lord Bute's death Gough's 'Itinerary of Edward I' (published in 1901), a work on the 'Order of Knights Templars,' and another on the 'Forms of the Blessing of the Waters,' by Dr. Wallis Budge.

Bute's practical interest in books and bibliography brought him into relations with the Library Association, of which he was long an active member. Another topic that attracted his versatile mind was the investigation of psychic phenomena and evidence of second sight. In 1897 mysterious noises which were said to be heard in Ballechin House in Perthshire led to an elaborate controversy in the 'Times' newspaper, and he and Miss Ada Goodrich-Freer, who had inquired into the matter, issued together a volume entitled 'The Alleged Haunting of B—— House' (London, 1899, 8vo; 2nd edit. 1900). In later life he purchased the 'Scottish Review,' a quarterly publication, and the extraordinary variety of his interests may be well gauged by the topics of his own contributions. They include, besides those already specified in this article, 'Ancient Celtic Latin Hymns' (1888), 'The New Light on St. Patrick' (1884), 'Patmos' (1885), 'Some Christian Monuments of Athens' (1885), 'The Scottish Peerage' (1886), 'The Bayrouth Festival' (1886), 'Amalfi

—the Last Resting Place of St. Andrew' (1888); 'The Trial and the Fate of Giordano Bruno' (1888); 'St. Brendan's Fabulous Voyage' (1893), as well as translations from the Greek of Demetrius Bikelas's writings on the 'Greek Question,' and translations of some novels of Tourgenieff. 'The Prophecies of St. Malachi' appeared in the 'Dublin Review' (1885). To Chambers's 'Encyclopedia' he contributed the articles 'Breviary' and 'Liturgy'; the latter article was abridged. Two volumes, respectively entitled 'Essays on Foreign Subjects' (1901) and 'Essays on Home Subjects' (1904), collected many of his scattered writings. At his death he was engaged with Mr. J. H. Stevenson and Mr. H. W. Lonsdale on 'The Arms of the Baronial and Police Burghs of Scotland,' which was published in 1902.

Bute's abilities—his deliberation, astuteness, courage, his knowledge and vast wealth—fitted him for a public career. But, although an admirable talker, he was of a retiring disposition, took no active part in politics, and preferred the life of a student. He was not a ready platform speaker, although his addresses and writings were characterised by careful preparation and an admirably concise, eloquent, and simple style. He was liberal in his private charities as well as in his public benefactions. His diaries show that his time was often spent in discussing with his secretary applications for assistance. He was created a knight of the Thistle in 1876, and was also a knight Grand Cross of the Holy Sepulchre and of St. Gregory.

Bute was seized in August 1899 with an apoplectic attack. He in great measure recovered. But on 8 Oct. 1900, while at Dumfries House, he experienced another seizure, to which next day he succumbed without rallying. His body was laid in the chapel by the shore at Mount Stuart, and, in obedience to the instructions he had left, his heart was conveyed to Jerusalem and buried on the Mount of Olives in presence of his family on 13 Nov. following.

In stature Bute was fully six feet. He was proportionately broad, with square shoulders, handsome, with distinguished bearing, dark brown hair and beard, blue grey eyes, and high-bridged nose. The principal portraits of him are, first, a full-length, at the age of twelve or so, by his mother's side (painted by J. R. Swinton) at Mount Stuart; secondly, a full-length, in Cardiff town council chamber (by Sir Hubert Herkomer, R.A., 1892); thirdly, large head size in lord rector's robes in Students' Union Buildings, St. Andrews (by E. T. Haynce, 1895); fourthly, another head size in provost's robes in Rothesay

town council chamber (by the same artist, 1898).

In 1872 he married the Hon. Guendolen Mary Anne, eldest daughter of Edward, first lord Howard of Glossop, and niece of Henry Granville, fourteenth duke of Norfolk. He left issue, first, John, born 1881, who during his father's life bore the title of Earl of Dumfries, and succeeded as fourth marquis; secondly, Ninian Edward, born in 1888; thirdly, Colum Edmund, born in 1886; and, fourthly, Lady Margaret.

[A sketch [by Rev. Dr. Metcalfe of Paisley, editor of the *Scottish Review*] in *Glasgow Herald*, 10 Oct. 1900; 'An Appreciation,' *Glasgow Herald*, 11 Oct. 1900; *Athenaeum*, 13 Oct. 1900; *Tablet*, 13 and 20 Oct. 1900; *Times*, 11 Oct. 1900; Letter by Mgr. Capal, 10 Nov. 1900 in *San Francisco Examiner*, per *Rothesay Express*, 19 Dec. 1900; *Complete Peerage*, by G. E. O'Kearney; private information and personal knowledge.] J. H. S.

SULLIVAN, SIR ARTHUR SEYMOUR (1842-1900), composer, younger son of Thomas Sullivan, was born at 8 Bolwell Terrace (now Street), Lambeth Walk, London, on 18 May 1842. His father, an excellent musician, played the violin in the orchestra of the Surrey Theatre, and afterwards became bandmaster at the Royal Military College, Sandhurst (1845-56); subsequently—until his death, 22 Sept. 1866, at the age of sixty-one—he held a professorship at the Royal Military School of Music, Kneller Hall, from its institution in 1857. Thomas Sullivan's elder son, Frederick (1837-1877), distinguished himself as an actor. The mother of the two boys, Mary Clementina, daughter of James Oghilan, came of an old Italian family named Righi.

Arthur Sullivan was cradled in music. At Sandhurst he obtained a practical knowledge of all the instruments in his father's band—'not a mere passing acquaintance, but a lifelong and intimate friendship.' He was sent to a boarding-school kept by W. G. Pless, at 20 Albert Terrace, Paddington. On 12 April 1854, aged nearly twelve, Sullivan was admitted one of the children of the Chapel Royal, St. James's, and two days later he was entrusted with the singing of a solo at one of the services. 'His voice was very sweet,' records Thomas Helmore [q. v.], the master of the children, 'and his style of singing far more sympathetic than that of most boys.' The children were boarded at 6 Oheyne Walk, Chelsea, with Helmore, who not only laid the foundations of Sullivan's musical education on a solid basis, but remained his attached friend till death. During his choristership Sullivan composed in

1855 a setting of 'Sing unto the Lord and praise His name.' This 'full anthem' was sung in the Chapel Royal when the dean (Bishop Blomfield of London), to show his appreciation of the youthful effort, rewarded the boy composer with half a sovereign. His first published composition, a sacred song, 'O Israel,' was issued by Novello & Co. in November of the same year (1855).

In June 1856 Sullivan was the youngest of seventeen candidates who entered for the recently founded Mendelssohn scholarship to perpetuate the memory of Mendelssohn in England. The result was a tie between Sullivan and Joseph Barnby [q. v. Suppl.], the youngest and oldest competitors. In a final trial, however, Sullivan became the victor. He entered, under the terms of the scholarship, the Royal Academy of Music as a student, though he did not leave the choir of the Chapel Royal until 22 June 1857. His teachers at the Royal Academy were Sterndale Bennett [q. v.] and Arthur O'Leary for pianoforte, and John Goss [q. v.] for composition. During his student period at Tenterden Street a setting by him of 'It was a Lover and his Lass,' for duet and chorus, was performed at the academy concert of 14 July 1857, and an overture on 13 July 1858. The latter work was praised by the 'Musical World' of 17 July 1858 (the leading musical journal of the day) for its cleverness, 'and an independent way of thinking, which, in one so young as the Mendelssohn scholar, looks well.' Outside his academy studies he took an active part in composing music for, and, clad in the academy uniform, in conducting the orchestra of, the Pinello Dramatic Society, an amateur organisation which had the advantage of his brother Fred's assistance in the capacity of stage manager and director-in-chief.

In the autumn of 1858 Sullivan was sent by the Mendelssohn scholarship committee to the Conservatorium, Leipzig. He studied there under Moritz Hauptmann (counterpoint), Julius Rietz (composition), Ignatz Moscheles and Louis Plaidy (pianoforte), and Ferdinand David (orchestral playing and conducting). At Leipzig his publicly performed compositions included a string quartett; an overture, 'The Feast of Rosos,' suggested by Thomas Moore's 'Lalla Rookh' (26 May 1860); and the music to Shakespeare's 'Tempest'—the last-named being his *early opus* from the Conservatorium.

Sullivan returned to England in April 1861, when he immediately had to set about earning his own living. He took a course of lessons on the organ from George Cooper [q. v.] in order to qualify himself for an

organist appointment. In the summer of 1861 he became organist and choirmaster of St. Michael's church, Chester Square, the adult members of his choir being composed of policemen! The turning-point of his life as a composer was reached by the performance of his wonderfully beautiful 'Tempest' music, played under the conductoiship of Mr. August Mauns at the Crystal Palace Saturday concert of 5 April 1862. Among the audience on that occasion was Charles Dickens, who said to the composer: 'I don't profess to be a musical critic, but I do know that I have listened to a very remarkable work.' The professional critics fully endorsed the opinion of the great novelist, and Sullivan at the age of twenty-one suddenly found himself famous. The 'Tempest' music, which was repeated at the concert on the following Saturday, must be placed among his best work. In melodic charm, dainty orchestration, and poetic fancy, Sullivan never surpassed this spontaneous composition of his youth. The arrival of the princess of Wales (Queen Alexandra) in London in March 1863 prompted a song, 'Bride from the North,' and a processional march. Sullivan's success as a song composer may be said to date from his five Shakespearean songs, produced at this time, of which 'Orpheus with his lute' stands out pre-eminently as a composition of sterling merit. The post of organist at the Royal Italian Opera, Covent Garden Theatre, which he held for a time under Costa's conductorehip, resulted in the composition of the ballet of 'L'île enchantée,' produced at Covent Garden on 16 May 1864. In the same year he made his first appearance as a composer at one of the great musical festivals by the production of his cantata 'Kenilworth' (libretto by H. F. Chorley) at Birmingham, 8 Sept. 1864. 'Kenilworth' contains a duet, 'How sweet the moonlight sleeps,' which is 'far too good to be forgotten.' He lost much time over an opera (libretto also by Chorley) entitled 'The Sapphire Necklace,' of which only the overture came to maturity, and which has been frequently performed in the concert-room. From 1865 to 1869 Sullivan held his first appointment as a *chef d'orchestre* in the conductorship of the Civil Service Musical Society.

The year 1866 was an important one in his career. He was offered by Sterndale Bennett, the principal, a professorship of composition at the Royal Academy of Music. He also became professor of 'pianoforte and ballad singing' at the Crystal Palace School of Art. His only symphony (in E) was produced at the Crystal Palace on 10 March 1866. On 11 July he gave a concert at St. James's Hall,

made additionally notable by the co-operation of Jenny Lind and the veteran Ignatz Moscheles. The sudden death of his father, on 22 Sept. 1866, furnished the promptings for this composition of his 'In Memoriam' overture, written for the Norwich musical festival, and first performed there 30 Oct. 1866. A concert for violoncello and orchestra was performed (the solo part played by Signor Piatti) at the Crystal Palace concert of 24 Nov.

This chief event of this eventful year (1866) was the beginning of Sullivan's comic opera career. His first venture in this extraordinarily successful field of artistic creativeness was 'Cox and Box: a new Triumvirate,' an adaptation by Sir F. C. Burnand of the well-known farce by Maddison Morton [q. v.], 'Box and Cox,' made still more comic by Burnand's interpellations, and set by Sullivan 'with a brightness and a drollery which at once placed him in the highest rank as a comic composer.' This amusing piece was privately performed at the residences of Burnand and Mr. Arthur J. Lewis (the latter on 27 April 1867), and in public at the Adelphi Theatre on 11 May 1867, at a benefit performance organised by the staff of 'Punch' for their late colleague, O. H. Bennett. 'Contrabandista' (libretto also by Burnand) followed in December. Then came a pause till the production of 'Thespis, or the Gods grown old; an operatic extravaganza,' libretto by Sir W. S. Gilbert (Gaiety Theatre, 26 Dec. 1871). This work was important in that it furnished the first fruits of that remarkable Gilbert and Sullivan collaboration which for nearly thirty years was extraordinarily prolific in results, and in fact inaugurated a new era in comic opera in this country. Its landmarks, so to speak, may be indicated by 'Trial by Jury' (1875), 'H.M.S. Pinafore' (1878), and 'The Mikado' (1895), the most popular of the series. In 'Trial by Jury' the composer's brother Frederick distinguished himself in the part of the Judge, and this comicality, by introducing the late Richard D'Oyly Carte as manager, initiated what may be called the Savoy Triumvirate—Gilbert, Sullivan, Carte. On 10 Oct. 1881 the Savoy Theatre, built by D'Oyly Carte especially for the Gilbert and Sullivan operas, was opened. A complete list of these works, with places and dates of their production, will be found at the end of this article.

To return to the more serious side of Sullivan's career, an overture, 'Marmion,' was commissioned by the Philharmonic Society and first performed at their concert of 8 June 1867. In the same month he be-

came the first organist and choirmaster of St. Peter's church, Cranley Gardens, Kensington (consecrated 29 June 1867). This post he held for a short time concurrently with that of St. Michael's, Chester Square; but early in 1872 he entirely relinquished his ecclesiastical offices. These appointments, however, were largely the means of bringing into existence his anthems, hymn tunes, and other sacred music. In October 1867 he visited Vienna in company with his friend Sir George Grove [q. v. Suppl.], an expedition made memorable by the discovery of some valuable manuscripts of Schubert (HELLBORN, *Life of Franz Schubert*, English transl., with appendix by George Grove, ii. 297).

As Sullivan had now fully established his reputation as a composer, it is not surprising that commissions began to reach him. For the Worcester musical festival of 1869 he composed his first oratorio, 'The Prodigal Son,' Sims Reeve [q. v. Suppl.] taking the principal part on its production on 8 Sept. The Birmingham festival of the following year brought forth his 'Overture di Ballo' (performed 31 Aug. 1870), 'which, while couched throughout in dance-rhythms, is constructed in perfectly classical forms.' In the spring of this year he delivered at the South Kensington Museum a course of lectures (illustrated by part singing) on the 'Theory and Practice of Music,' in connection with a scheme entitled 'Instruction in Science and Art for Women.' For the opening of the International Exhibition on 1 May 1871, he composed the cantata 'On Shore and Sea' (words by Tom Taylor), and exactly a year later his festival 'Te Deum,' to celebrate the recovery of King Edward VII, then prince of Wales, from his serious illness, was performed at the Crystal Palace by two thousand executants in the presence of thirty thousand people. In November of the same year he became the first conductor of the Royal Amateur Orchestral Society. His second oratorio, 'The Light of the World,' was composed for the Birmingham festival of 1873, and first performed 27 Aug. In the following year he edited the musical section of 'Church Hymns, with Tunes,' published by the Society for the Promotion of Christian Knowledge. At Manchester, on 26 Feb. 1874, after a performance of 'The Light of the World' he was presented with an old English silver goblet and a purse containing 200*l*. In July 1874 he was appointed conductor of the Royal Aquarium orchestra: this post he held till May 1876. His other conducting engagements, in addition to those

already mentioned, were: Messrs. Gatti's promenade concerts at Covent Garden Theatre during the seasons of 1878 and 1879; the Glasgow Choral Union orchestral concerts for two seasons, 1876-7; the Leeds musical festival (triennial) from 1880 to 1898; and the Philharmonic Society (London) from 1886 to 1887.

Sullivan was appointed the first principal of the National Training School of Music (South Kensington) in 1876, which office he held till 1881, when he was succeeded by Dr. (afterwards Sir John) Stainer. On 1 June 1876, in company with his old master, John Goes, he received the degree of Doctor in Music (*honoris causa*) at the university of Cambridge. A similar distinction was bestowed upon him at Oxford three years later, the occasion being the first time that honorary degrees in music were conferred by the university. In 1878 he acted as British Commissioner for Music at the International Exhibition at Paris, when he was decorated with the Order of the Légion d'honneur of France. A visit to America in November 1879, in company with Sir W. S. Gilbert and D'Oyly Carte, was in the nature of a triumphal reception.

To inaugurate his conductorship of the Leeds festival—in succession to Michael Costa [q. v.]—he composed his sacred music drama 'The Martyr of Antioch' (the words selected from Dean Milman's poem), performed 15 Oct. 1880. At the festival of 1886 (16 Oct.) his setting of Longfellow's 'Golden Legend' was first produced with a success that has ever since been accorded to this his finest as well as his most popular choral work. The Leeds festival of 1886 was made additionally memorable by a very remarkable performance under Sullivan of Bach's Mass in B minor. Apart from the succession of his comic operas, the outstanding event in the latter years of Sullivan's life was his serious (or 'grand') opera 'Ivanhoe,' produced at the Royal English Opera House (now the Palace Theatre), Shaftesbury Avenue, 31 Jan. 1891.

Delicate as a child, Sullivan suffered much ill-health during the greater part of his life. He died, somewhat suddenly, at his residence, 1 Queen's Mansions, Victoria Street, Westminster, on 22 Nov. 1900. His funeral partook of the nature of a public ceremony, and, after a service in the Chapel Royal, St. James's, where he had so often sung as a boy, his remains were interred in the crypt of St. Paul's Cathedral. Shortly before his death he returned to his early love, church music, by composing, at the request of the authorities of St. Paul's

Cathedral, a 'Te Deum' for chorus and orchestra to celebrate the cessation of hostilities in South Africa when that happy consummation should take place (Sir George Martin's letter to the *Times*, 29 Nov. 1900).

Sullivan, who was unmarried, received the following distinctions: fellow of the Royal Academy of Music (his *alma mater*); Mus.Doc. Cantabr. (1876) and Mus.Doc. Oxon. (1879), both *honoris causa*; Order of the Légion d'honneur of France, 1878; Order of the Medjidieh from the sultan of Turkey, 1888; Order of Saxe-Coburg and Gotha; the Royal Victorian Order. He was knighted on 22 May 1883.

A portrait of Sullivan by Sir J. E. Millais, painted in 1888, is destined for the National Portrait Gallery. A mural tablet was placed above his grave in the crypt of St. Paul's Cathedral. A memorial tablet was fixed to the house where he was born on 20 July 1901, and a public monument was erected in the Embankment Gardens, London.

As a composer Sullivan was typically British (see his letter, signed 'A British Musician,' to the *Times*, 20 July 1897, on the subject of neglect of native music by British military bands). Melody, that rare gift, he possessed in a degree that may be classed as genius. The influence of his early training in the choir of the Chapel Royal is traceable in all his vocal music, solo and concerted, which is always grateful to sing and interesting to the singer. He was a master of orchestration, his treatment of the wood-wind being in many instances worthy of Schubert. Here again the seed sown in the band-room at Sandhurst bore rich fruit. Moreover, not a little of the humour of the comic operas is due to his masterfulness in extracting fun from his lifelong friends, the instruments. His creative achievements may be summarised in the words of his friend and early encourager, Sir George Grove: 'Form and symmetry he seems to possess by instinct; rhythm and melody clothe everything he touches; the music shows not only sympathetic genius, but sense, judgment, proportion, and a complete absence of pedantry and pretension; while the orchestration is distinguished by a happy and original beauty hardly surpassed by the great masters' (Grove, *Diet. of Music and Musicians*, iii. 763 a).

The following is an attempt at a complete list of Sullivan's compositions:

Oratorios and Cantatas.—'Kenilworth' (H. F. Chorley), Birmingham festival, 8 Sept. 1864; 'The Prodigal Son,' Worcester festival, 8 Sept. 1869; 'On Shore and Sea'

(Tom Taylor), composed for the opening of the Royal Albert Hall, Kensington, 1 May 1871; Festival 'Te Deum,' Crystal Palace, 1 May 1872, to commemorate the recovery of King Edward VII, then prince of Wales; 'The Light of the World,' oratorio, Birmingham festival, 27 Aug. 1873; 'The Martyr of Antioch' (Dean Milman), Leeds festival, 15 Oct. 1880; 'The Golden Legend' (Longfellow, adapted by Joseph Bennett), Leeds, 16 Oct. 1886; Exhibition ode (Tennyson), opening of the Colonial exhibition, Royal Albert Hall, 4 May 1886; Imperial Institute ode (Lewis Morris), composed for the laying of the foundation-stone by Queen Victoria, 4 July 1887; Imperial March, opening of the Imperial Institute by Queen Victoria, 10 May 1893.

Operas and Plays.—'Cox and Box' (F. C. Burnand), Adelphi Theatre, first public performance 11 May 1867; 'The Contrabandista' (F. C. Burnand), St. George's Hall, 18 Dec. 1867; 'Thespis, or the Gods grown old,' Gaiety Theatre, 26 Dec. 1871; 'Trial by Jury,' new Royalty Theatre, 25 March 1875; 'The Zoo: an original musical folly' (B. C. Stephenson, who wrote the libretto under the pseudonym W. M. Bolton Rowe), St. James's Theatre, 5 June 1876; 'The Sorcerer,' Opera Comique, 17 Nov. 1877; 'H.M.S. Pinafore,' the same, 25 May 1878; 'Pirates of Penzance,' 3 April 1880; 'Patience,' the same, 28 April 1881. The following were produced at the Savoy Theatre: 'Iolanthe,' 25 Nov. 1882; 'Princess Ida,' 5 Jan. 1884; 'The Mikado,' 14 March 1885; 'Ruddigore,' 22 Jan. 1887; 'The Yeomen of the Guard,' 3 Oct. 1888; 'The Gondoliers,' 7 Dec. 1889; 'Haddon Hall' (Sydney Grundy), 24 Sept. 1892; 'Utopia (Limited),' 7 Oct. 1893; 'The Chieftain,' enlarged version of 'Contrabandista' (F. C. Burnand), 12 Dec. 1894; 'The Grand Duke,' 7 March 1896; 'The Beauty Stone' (A. W. Pinero and Comyn Carr), 28 May 1898; 'The Rose of Persia,' 29 Nov. 1899; 'The Emerald Isle' (Basil Hood), an unfinished opera, but completed by Edward German, and produced at the Savoy Theatre, 27 April 1901 (unless otherwise stated, all the foregoing are settings of librettos by W. S. Gilbert); grand opera, 'Ivanhoe' (Julian Sturgis), produced at the Royal English Opera House, 31 Jan. 1891.

Incidental Music to Plays.—'The Tempest' (op. 1), Crystal Palace, 5 April 1862; 'Merchant of Venice,' Prince's Theatre, Manchester, 10 Sept. 1871; 'Merry Wives of Windsor,' Gaiety Theatre, 19 Dec. 1874; 'Henry VIII,' Theatre Royal, Manchester, 29 Aug. 1877; 'Macbeth,' Lyceum Theatre,

29 Dec. 1888; 'The Foresters,' by Tennyson, Daly's Theatre, New York, 25 March 1892; 'King Arthur,' Lyceum Theatre, 12 Jan. 1895.

Orchestral Compositions.—Procession March, composed in celebration of the marriage of King Edward VII, then prince of Wales, and performed at the Crystal Palace on 14 March 1863; Symphony in E, Crystal Palace, 10 March 1866. Overtures: 'In Memoriam' (of his father), Norwich festival, 30 Oct. 1886; 'Marmion,' Philharmonic Society, 3 June 1867; 'Di Ballo,' Birmingham festival, 31 Aug. 1870; Concertino for violoncello and orchestra, Crystal Palace (Piatti soloist), 24 Nov. 1866. Ballets: 'L'Île Enchantée,' Covent Garden Theatre, 16 May 1864; 'Victoria and Merrie England' (ballet), Alhambra, 25 May 1897.

Pianoforte Compositions.—Reverie in A, Melody in D (originally published as 'Thoughts'), 1862; 'Day Dreams,' six pieces, 1867; and 'Twilight,' 1868.

Violoncello Compositions.—Concerto in D (composed expressly for Signor Piatti), 1866; and Duo concertante for pianoforte and violoncello, 1868.

Songs and Duets.—Nearly one hundred. Of these 'The Lost Chord' (a setting of Adelaide Procter's words) has attained extraordinary popularity. The cycle of (eleven out of twelve) songs entitled 'The Window, or the Loves of the Wrens,' lyrics by Tennyson, published in 1871, take high rank in the realm of the art-song.

Part-songs (secular).—Ten. The settings of Sir Walter Scott's lines, 'O hush thee, my babe' (for mixed voices), first performed by Barnby's choir, St. James's Hall, 23 May 1867, and 'The long day closes' (for male voices), words by H. F. Chorley, are the best known.

Sacred Music.—Thirteen anthems; Morning Service in D; part-songs, arrangements of tunes, &c. (a complete list of these appeared in the *Musical Times*, January 1901, p. 24); Hymn tunes, about fifty, of which 'St. Gertrude,' a setting of the Rev. S. Baring-Gould's words, 'Onward, Christian soldiers,' was composed for the 'Hymnary,' 1872, but the tune first appeared in the 'Musical Times,' December 1871. A practically complete collection of his hymn tunes is published by Messrs. Novello, the well-known music publishers of London.

Sullivan edited 'Church Hymns with Tunes' (1874), and Messrs. Boosey's edition of operas, and he wrote additional accompaniments to Handel's 'Jephtha' for the performance of that work at the Oratorio Concerts, St. James's Hall, 5 Feb. 1869.

SWANBOROUGH, Mrs. ARTHUR (1840-1898), actress. [See BURTON, ELIZABETH.]

SWANWICK, ANNA (1813-1899), authoress, youngest daughter of John Swanwick and his wife, Hannah Hilditch, was born at Liverpool on 22 June 1813. The Swanwicks were descended from Philip Henry, the seventeenth-century nonconformist divine. Anna was educated chiefly at home, but, wishing to carry on her education beyond the age usual for girls in this country at that time, she went in 1833 to Lernu, where she studied German and Greek, and gained a knowledge of Hebrew. She returned to England in 1843 and commenced translating some of the German dramatists. Her earliest publication, which appeared in 1843, was 'Selections from the Dramas of Goethe and Schiller.' They included Goethe's 'Torquato Tasso' and 'Iphigenia in Tauris,' and Schiller's 'Maid of Orleans.' In 1850 appeared a volume of translations from Goethe's containing the first part of 'Faust,' 'Egmont,' and the two plays of the former volume. The translations are in blank verse. In 1878 she published the second part of 'Faust'—the two parts with Retzsch's illustrations appeared together in one volume this same year. Miss Swanwick's 'Faust' passed through many editions and was included in Bohn's series of translations from foreign classics. Her English version is accurate and spirited, and may be regarded as one of the best in existence.

About 1850 Bunsen advised her to try her hand at translating from the Greek, with the result that in 1856 she published a blank-verse translation of the 'Trilogy' of Æschylus, and in 1878 of the whole of his dramas. The choruses are in rhymed metres. Her translation has passed through many editions and ranks high among English versions. It keeps fairly close to the original.

But Miss Swanwick did not confine herself to literary work. She took a keen interest in many social questions of the day, and especially in that of women's education, and in raising the moral and intellectual tone

of the working classes. She was a member of the councils both of Queen's and Bedford Colleges, London, and was for some time president of the latter. She assisted in the founding of Girton College, Cambridge, and Somerville Hall, Oxford, and in extending the King's College lectures to women. To all these institutions she subscribed liberally. She was associated with Anthony John Mundella [q. v. Suppl.] and Sir Joshua Fitch in carrying out the provisions of the will of Mrs. Emily Pfeiffer [q. v.], who left in 1890 large sums of money for the promotion of the higher education of women. She strongly advocated the study of English literature in the universities, and herself lectured privately on the subject to young working men and women.

Miss Swanwick's life was thus divided between literary pursuits and active philanthropy. She never sought publicity, but her example and influence had an important and invigorating effect on women's education and on their position in the community. She signed John Stuart Mill's petition to parliament in 1865 for the political enfranchisement of women. The university of Aberdeen conferred on her the honorary degree of LL.D. She was a Unitarian in religion.

Miss Swanwick was the centre of a large circle of distinguished friends, who included Crabb Robinson, Tennyson, Browning, Gladstones, James Martineau, and Sir James Paget, and these, with many others, were frequent visitors at her house. Her marvellous memory made her a delightful talker, and she was full of anecdote in later years about the eminent persons she had known.

She died on 2 Nov. 1899 at Tunbridge Wells, and was buried on the 7th in Highgate cemetery.

Other works by Miss Swanwick are: 1. 'Books, our best Friends or our deadliest Foes,' 1886. 2. 'An Utopian Dream and how it may be realised,' 1888. 3. 'Poets, the Interpreters of their Age,' 1892. 4. 'Evolution and the Religion of the Future,' 1894.

[Miss M. L. Bruce's Anna Swanwick, a memoir, 1903; Times, 4 Nov. 1899.] E. L.

SYMONS, GEORGE JAMES (1838-1900), meteorologist, was the only child of Joseph Symons by his wife, Georgina Moon, and was born at Queen's Row, Pimlico, on 6 Aug. 1838. His education, begun at St. Peter's collegiate school, Eaton Square, was completed under private tuition at Thornton rectory, Leicestershire. He subsequently passed with distinction through the course at the school of mines, Jernyn

Street. From boyhood he made observations on the weather with instruments of his own construction, and at the age of seventeen became a member of the Royal Meteorological Society. From 1863 he sat on the council, acted as secretary 1873-9 and 1882-99, and was elected president in 1880 and again in 1900. In 1857 he undertook, and continued to discharge until his death, the duties of meteorological reporter to the registrar-general, and was appointed by Admiral Fitzroy in 1860 to a post in the meteorological department of the board of trade, which he held for three years. He resigned it owing to the growing exigencies of his rainfall observations. The first of a series of thirty-nine annual volumes containing statistics on the subject was published by him in 1860; it included records from 168 stations in England and Wales. In 1898 the number of stations had grown to 3,401, of which 436 were in Scotland and 186 in Ireland, and they were manned by an army of over three thousand volunteer observers. This unique organisation was kept by Symons under close personal supervision, and the upshot was the accumulation of a mass of data of standard value, unmatched in any other country. The sanitary importance of water-supply was a determining motive for its collection.

Symons began, in 1863, the issue of a monthly rain-circular, which developed in 1866 into the 'Monthly Meteorological Magazine,' still in course of publication. He was a prominent member of various committees appointed by the British Association, and as secretary to the conference on lightning rods in 1878 shared largely in the four years' task of compiling its report. Elected in 1878 a fellow of the Royal Society, he acted as chairman of the committee on the eruption of Krakatoa in 1883, and edited the voluminous report published in 1888. He sat on the council of the Social Science Association in 1878, and on the jury of the Health Exhibition in 1884; was registrar to the Sanitary Institute from 1880 to 1896, and drew up a report on the Essex earthquake of 22 April 1884 for the Mansion House committee. In 1876 he received the Telford premium of the Institution of Civil Engineers for a paper on 'Floods and Water Economy,' and in 1897 the Albert medal of the Society of Arts for the 'services rendered to the United Kingdom' by his rainfall observations.

He was a member of the Scottish and Australasian Meteorological Societies, of the Royal Botanical Society, and of many foreign learned associations. Twice elected to the

council of the Société Météorologique de France, he frequently attended its meetings at Paris, and was made, in 1891, a chevalier of the legion of honour.

Struck with paralysis on 14 Feb., he died on 10 March 1900, and was buried in Kensal Green cemetery. He married in 1866 Elizabeth Luke, who shared his labours until her death in 1884. Their only child died in infancy.

His work on rainfall is being continued by Mr. H. Sowerby Wallis, his coadjutor during thirty years. A paper on 'The Wiltshire Whirlwind of October 1, 1889,' prepared by him a few days before his last illness, was read to the Royal Meteorological Society on 16 May 1900. A gold medal in his memory was founded by the same body, to be awarded for services to meteorological science. The record of weather kept by Symons at his house in Camden Square was maintained unbroken for forty-two years. Throughout his life he made many friends and incurred no enmity. His library contained ten thousand volumes and pamphlets. Besides essays and reports, he wrote: 1. 'Rain: how, when, where, why it is measured,' London, 1867. 2. 'Pocket Altitude Tables,' London, 1876, &c., three editions. 3. 'The Floating Island in Derwentwater,' London, 1889. 4. 'Merle's MS. Consideraciones Temperiei pro 7 Annis 1337-1341,' reproduced under his supervision, London, 1891 [see MERLE, WILLIAM]. 5. 'Theophrastus on Winds and Weather Signs,' edited from John George Wood's translation, London, 1891. Mr. Benjamin Daydon Jackson's 'Vegetable Technology,' London, 1882, was based upon a catalogue of works on applied botany published by Symons in the 'Colonies and India' for 18 Sept. 1879. A report drawn up by him in 1861 on the anemometry of Bermuda appeared in the eighth number of the meteorological papers issued by the board of trade.

[Symons's British Rainfall for 1899, compiled by H. Sowerby Wallis, p. 14 (with portrait); Times, 13 March 1900; Nature, 16 March 1900; Observatory, xxiii. 173 (W. C. Nash).] A. M. C.

SYMONS, SIR WILLIAM PENN (1848-1899), major-general, born on 17 July 1848, was eldest son of William Symons of Hatt, Cornwall, by Caroline Anne Southwell, daughter of William Courtie of Plymouth. His father was recorder of Saltash, and was a descendant of Simon, lord of Saint-Sever, who came to England with William I. He was educated privately, and was commissioned as ensign in the 24th foot on 6 March 1863. He became lieutenant on 30 Oct.

1866, and captain on 16 Feb. 1878. He served with the second battalion of his regiment in the operations against Sandile in Kaffraria in 1878, and in the Zulu war of 1879, receiving the medal with clasp. Owing to the destruction of the first battalion at Isandhlwana, he obtained his majority on 1 July 1881. He went to India with his battalion in 1880, and on 30 Sept. 1882 was appointed assistant adjutant-general for musketry in Madras. He served on the staff in the expedition to Burma in 1885, and afterwards organised a force of mounted infantry which won special praise from Lord Roberts (*Forty-one Years in India*, p. 518). In 1889 he commanded the Burma column in the Chin-Lushai expedition, and received the thanks of the Indian government. He was repeatedly mentioned in despatches (*London Gazette*, 22 June 1886, 2 Sept. 1887, 15 Nov. 1889, 12 Sept. 1890), and was given the brevet rank of lieutenant-colonel (17 May 1886) and of colonel (1 July 1887), the C.B. (14 Nov. 1890), and the Indian medal of 1804 with two clasps.

On 31 Jan. 1891 he was promoted regimental lieutenant-colonel, and commanded the second battalion of the South Wales borderers (late 24th) till 8 April 1893, when he became, by Lord Roberts's selection, assistant adjutant-general for musketry in Bengal. An excellent shot and a skilful swordsman himself, he did his best to raise the standard of shooting in the army. On 25 March 1895 he was appointed to command a second-class district in the Punjab as brigadier-general. He commanded a brigade in the Waziristan expedition of 1894-5 (*ib.* 2 July 1895), and received the clasp. In 1898 he commanded a brigade in the Tochi field force, and afterwards the first division in the Tirah expedition (*ib.* 11 Feb. and 5 April 1898). He was made K.C.B. on 20 May 1898, and received the Indian medal of 1895 with two clasps.

On 15 May 1899 he was appointed to the command of the troops in Natal, then numbering about five thousand men. War with the Transvaal Republic was already in prospect, and in July Symons informed the governor that an increase of sixteen hundred men was required to defend the colony against raids, and of 5,800 men to defend it

against an invasion. In the autumn reinforcements larger than he had asked for came from India and the Mediterranean, and on 20 Sept. Symons was given the temporary rank of major-general. To meet the wish of the civil government of Natal, he divided his troops between Ladysmith and Dundee. On 3 Oct. Sir George White arrived and assumed the chief command in Natal. War was declared by the Transvaal and the Orange Free State Republics on 10 Oct. The troops were organised as the fourth division of the South Africa field force, under Symons, who was made temporary lieutenant-general on 9 Oct. He was sent to Dundee, where four battalions, three batteries, and one cavalry regiment were encamped. There he was attacked on 20 Oct. by about four thousand Boers with six guns under Lucas Meyer. These had come from the east, while two other bodies were approaching from the north and west, blocking the railway from Ladysmith. The guns of Meyer's force opened fire on the camp at daybreak from Talana hill, three miles to the east of it. Symons led out his troops and assailed this hill with three battalions. By 1.30 p.m. it was most gallantly stormed, but Symons was mortally wounded by a bullet in the stomach in the course of the advance. Two days afterwards the British force retired on Ladysmith, but Symons, with other wounded men, had to be left at Dundee, and he died there on the 23rd. He was buried on the 24th in the church of England burial-ground, with marks of respect from the Boers. The 'London Gazette' of that day notified his promotion to major-general for distinguished service in the field. Sir George White described him as 'an officer of high ability and a leader of exceptional valour.' A memorial window in Botolph Claydon Church, near Saltash, Cornwall, was unveiled in October 1900.

On 13 Feb. 1877 he married Caroline, only daughter of Thomas Pinfold Hawkins of Edgbaston; she survived him.

[Burke's Landed Gentry; Historical Records of the 21th Regiment (of which Symons was one of the editors); Hutchinson's Campaign in Tirah; Parliamentary Papers, Cd. 44, correspondence relative to the defence of Natal; Standard, 27 Oct. 1899.]

E. M. L.

T

TAIT, ROBERT LAWSON (1845-1899), surgeon, born at 45 Frederick Street, Edinburgh, on 1 May 1845, was son of Archibald Campbell Tait of Dryden, then a guild brother of Heriot's Hospital, and Isabella Stewart Lawson of Leven. From the age of seven Lawson Tait was educated at Heriot's Hospital school. He became a student of medicine at the university of Edinburgh and in the extramural school, where he worked under the immediate superintendence of Alexander McKenzie Edwards, the favourite pupil of Sir William Fergusson [q. v.]. In 1866 he was admitted a licentiate of the Royal College of Physicians and of the Royal College of Surgeons of Edinburgh, and he acted for a time as assistant to Sir Henry Littlejohn and Sir James Young Simpson [q. v.]. He was also profoundly influenced by the example of James Syme [q. v.], whose habits of cleanliness in his surgical work were in contrast with the methods and results of most of his contemporaries. During this time he gave particular attention to biology and histology.

Tait was appointed house-surgeon to the Wakefield Hospital in 1867, a post he held for three years, and it was here that he performed his first ovariectomy on 29 July 1868, in the earlier months of his twenty-fourth year. He performed a similar operation on five occasions before he removed to Birmingham in 1870; but this experience does not seem to have directed his attention to the work of his life, for in September 1870 he took the practice of Mr. Thomas Partridge and settled in Birmingham at the corner of Burbury Street, Lozells Road. He was admitted a member of the Royal College of Surgeons of England on 25 Jan. 1870, and later in the same year he was elected a fellow of the Royal College of Surgeons of Edinburgh. In Birmingham he soon made a name for himself as a bold surgeon, an aggressive enemy, and an original thinker. He was a lecturer on physiology at the Midland Institute from 1871 to 1879, where his teaching of the Darwinian theory of evolution excited from time to time much public opposition. He was elected, after examination, a fellow of the Royal College of Surgeons of England on 8 June 1871, and in the following month he was appointed surgeon to the newly founded Hospital for Diseases of Women, a post he held until 1893, when he was elected a member of the consulting staff. In 1873 he was awarded the Hastings gold medal of

the British Medical Association for his essay on 'Diseases of the Ovaries,' and in 1890 he received the Cullen and Liston triennial prize at Edinburgh for his services to medicine, especially in connection with his work on the gall-bladder. This prize, which was afterwards exhibited in the art gallery at Birmingham, consisted of a silver bowl of seventeenth-century London workmanship. In 1872 he performed two operations of historic importance, for on 2 Feb. he removed an ovary for suppurative disease, and on 1 Aug. he extirpated the uterine appendages to arrest the growth of a bleeding myoma. In 1873 he performed his first hysterectomy for myoma of the uterus, following with but slight modification the technique of Koserlé, and in June 1876 he removed a hæmato-salpinx, and thus made the profession familiar with the pathology of this condition. In 1878 Tait began to express doubts as to the value of the Listerian precautions then adopted by most operating surgeons, and thus became a leader in the school of 'aseptic' as opposed to 'antiseptic' surgery. In 1879 he did his first cholecystotomy, an operation which marked the beginning of the rational surgery of the gall tract. On 17 Jan. 1883 he first performed the operation for ruptured tubal pregnancy and saved the patient. A series of thirty-five cases with but two deaths speedily followed, and the operation took its place as a recognised method of treating a desperate condition.

In 1874 Lawson Tait was instrumental in organising the Birmingham Medical Institute, of which he was an original member, and in 1887 he was one of the founders of the British Gynecological Society, serving as its president in 1886. In 1887 he became professor of gynecology at Queen's College, and in 1890 he was bailiff of the Mason College. He was instrumental in 1892 in causing the medical school of Queen's College to be transferred to Mason College, and thus smoothed the way for the foundation of the university of Birmingham.

Tait performed many of the duties of a citizen in Birmingham. Elected a member of the city council in 1868 as a representative of the Bordesley division, he became chairman of the health committee and a member of the asylums committee. He contested the Bordesley division of the city in the Gladstonian interest in 1886, but was easily defeated by Mr. Jesse Collings.

In the British Medical Association Tait was a member of the council, president of the Birmingham branch and also of the Worcester-shire and Herefordshire branch, and in 1890 he delivered the address on surgery when the association held its annual meeting in Birmingham. He was president of the Medical Defence Union and raised the society to a position of considerable importance. In 1876 he was president of the Birmingham Natural History Society, and in 1884 he was president of the Birmingham Philosophical Society. He was also professor of anatomy at the Royal Society of Artists and Birmingham School of Design. He was too a founder of the Midland Union of Natural History Societies, and was largely concerned in the establishment of coffee-houses in Birmingham.

The university of the State of New York conferred on him, *honoris causa*, the degree of M.D. in 1886, and in 1889 he received a similar tribute from the St. Louis College of Physicians and Surgeons, while in 1888 the Union University of New York conferred upon him the degree of LL.D. At the time of his death he was an honorary fellow of the American Gynaecological Society and of the American Association of Obstetricians and Gynaecologists.

The last five years of Tait's life were marked by almost continuous ill-health, which caused him to relinquish much of his operative work for the repose of Llandudno, where he purchased a house. Here he died of uræmia on 19 June 1899. His body was cremated at Liverpool, the ashes being afterwards interred in Gogarath's cave, an ancient burial-place in the grounds of his Welsh home. He married, in 1871, Sybil Anue, a daughter of William Stewart, solicitor of Wakefield, Yorkshire, but he had no children.

Lawson Tait was a frequent contributor to the press, lay as well as medical. He had a sound antiquarian knowledge; he was an excellent companion, a good raconteur, and an admirable public speaker. He enjoyed being in a minority, and this led him to champion many lost causes. As a surgeon he simplified and perfected the technique and greatly enlarged the scope of abdominal surgery. The pioneers in this department of surgery had almost limited themselves to the diseases of the ovaries and uterus; but Tait's consummate operative skill, coupled with his power of generalisation, enabled him to extend the range of uterine surgery and to apply its principles, until now nearly every abdominal organ can be successfully explored and treated by the surgeon.

He published: 1. 'The Pathology and

Treatment of Diseases of the Ovaries' (the Hastings prize essay, 1873), 1874; 4th edit. 1882. 2. 'An Essay on Hospital Mortality, based on the Statistics of the Hospitals of Great Britain for Fifteen Years,' London, 1877, 8vo. 3. 'Diseases of Women,' London, 1877, 8vo; 2nd edit. 1886. An American edition was published in New York in 1879 and at Philadelphia in 1889, and the work was translated into French by Dr. Olivier in 1886 and by Dr. Bétrix in 1891. 4. 'The Uselessness of Vivisection upon Animals as a Method of Scientific Research,' Birmingham, 1882, 8vo; reissued in America in 1883, and translated into German, Dresden, 1883, 8vo. 5. 'Lectures on Ectopic Pregnancy and Pelvic Hematocoele,' Birmingham, 1888, 8vo.

[Lancet and British Medical Journal, vol. i. 1899; The Journal of the American Medical Association, vol. xviii. 1892 and xxxii. 876, 1899; Contemporary Medical Men, edited by John Leyland, vol. ii. 1888; private information.] D'A. P.

TATE, SIR HENRY (1819-1899), first baronet, public benefactor, eldest son of William Tate of Chorley, Lancashire, by Agnes, daughter of Nathaniel Booth of Gildersome, Yorkshire, was born at Chorley on 11 March 1819. Having started life as a grocer's assistant, he entered the firm of a large sugar-refiner in Liverpool, and soon rose to a position of responsibility. In 1872 an invention was brought to him which removed one of the great difficulties of the retail sugar trade. By an exceedingly simple process the invention cut up sugar-loaves into small pieces for domestic use. Tate at once recognised the usefulness of the invention, patented it, and laid the foundations of his fortune. In 1880 he migrated to London, very soon took a leading position in the Mincing Lane market, and developed his business until it assumed gigantic proportions and until 'Tate's cube sugar' became known all over the world. Tate's local benefactions kept pace with his fortune. He gave no less than 42,000*l.* to the newly founded University College of Liverpool (1881-2), and even larger sums to the various Liverpool hospitals, in addition to a large number of anonymous donations both to individuals and to charities. On becoming a resident at Stroatham Common his bounty was extended to South London, where, among other donations, he gave (at a cost of 16,700*l.*) a handsome free library to Brixton, opened by King Edward VII, then prince of Wales, on 8 March 1898.

But Tate is remembered primarily for his munificent patronage of British art. He

built a spacious gallery at Park Hill, Streatham, and adorned it with the best works by contemporary masters, conspicuously with the finest works of Millais, such as 'Ophelia,' 'The North-West Passage,' and 'The Vale of Rest.' Every year, just before the opening of the academy exhibition, he gave a dinner of the proportions of a banquet to the leading artists at his house. About 1890 he formed the design of presenting his collection of modern pictures to the National Gallery. Scruples having been raised as to the acceptance of such a collection *en bloc*, Tate approached the Chancellor of the Exchequer (Mr. Goschen) with an offer to erect a gallery of British art, and to present the nation with the bulk of his pictures as a nucleus for a permanent exhibition of modern British paintings, provided only that the government would find the site for such a building. Mr. Goschen accepted the offer, and made overtures, which were rejected by the City corporation, for acquiring a site upon the Blackfriars Embankment, after which but little energy was displayed in the discovery of a site until in 1893 Sir William Harcourt offered the ground upon which stood Millbank Prison, then about to be demolished. He also promised to maintain the gallery, and to place the foundation in the hands of the trustees of the National Gallery. The offer was gladly accepted by Tate. The gallery, reared at his expense, and designed by Mr. Sidney R. J. Smith in 'a free classic style' with a handsome Corinthian portico, was opened by King Edward VII and Queen Alexandra (then prince and princess of Wales) on 21 July 1897, Sir W. Harcourt and Mr. Arthur Balfour being present and making speeches, to which Tate replied. In the seven galleries that formed the original building were housed sixty-five pictures from Tate's collection, sixty-four pictures purchased under the bequest of Sir Francis Legatt Chantrey [q.v.], eighteen pictures presented by George Frederick Watts, R.A., and ninety-eight pictures from the modern portion of the National Gallery. The building was styled the National Gallery of British Art, but familiarly known as 'The Tate Gallery.' Predictions made as to the dampness of the site have happily proved unfounded; the building is light, the internal arrangements admirable in every way, though the situation might be made more accessible. Tate was made a trustee of the National Gallery at the end of 1897, and was created a baronet on 27 June 1898. In that year Sir Henry commenced the extension of the building, which he had

promised to undertake in his speech at the opening of the gallery. The additions were completed on 27 Nov. 1899, when the accommodation was nearly doubled, and the value of Tate's gift to the nation raised to not far short of half a million. The first keeper, Sir Charles Holroyd, was, on his appointment to the National Gallery, succeeded by Mr. D. S. Maccoll in 1906. The gallery contains nearly 400 paintings and drawings, in addition to pieces of sculpture, for which a gallery was provided in the new buildings. Several fine pictures were added to the collection by Tate as a supplement to the original 'Tate gift,' and 'The Childhood of Raleigh,' by Millais, was presented by Lady Tate shortly after his death, which took place at Streatham Hill after a long illness on 5 Dec. 1899. He married, first, on 1 March 1841, Jane, daughter of John Wignall, by whom he had, with other issue, Sir William Henry Tate (b. 23 Jan. 1842), the second baronet; secondly, on 8 Oct. 1885, Amy Fanny, only daughter of Charles Hislop of Brixton Hill, who survived him.

A speaking likeness of Sir Henry Tate is in the gallery which the nation owes to his munificence. It is a bronze bust by Mr. Thomas Brock, presented to the gallery by Sir William Agnew, Sir Edward Poynter, and other admirers in recognition of Tate's great service to British art. A photographic likeness forms the frontispiece to 'The Year's Art,' 1898. An oil portrait by Sir Hubert Herkomer, in the possession of Lady Tate, has been engraved in mezzotint; the original is destined eventually to be placed in the Tate Gallery. A bust is in the library of the University College, Liverpool, which was built at his expense.

[Times, 21 July 1897, 28 Nov. 1899, 6 Dec. 1899; Athenaeum, 9 Dec. 1899; Ann. Reg. 1899 [188]; Magazine of Art, November 1898. December 1897, January 1900; Tate Gallery Illustrated Catalogue, 1897; Saturday Review, 9 Dec. 1899; Illustrated London News, 9 Dec. 1899 (portrait).] T. S.

THOMAS, WILLIAM LUSON (1880-1900), founder of the 'Graphic' and 'Daily Graphic,' the son of a London shipbroker, William Thomas, by his wife, Alicia Hayes, was born on 4 Dec. 1880, and was educated at Fulham. On leaving school he joined his elder brother, George Housman Thomas (1824-1868) [q.v.], who was practising at Paris as an engraver on wood. In 1846 the two brothers, accompanied by Mr. H. Harrison, the brother-in-law and partner of the elder, went to America to take part in the

promotion of two illustrated journals, 'The Republic' and 'The Picture Gallery.' Both enterprises failed, the health of George Thomas broke down, and the brothers returned to Europe. They spent two years at Rome, and William Thomas then joined the wood-engraver William James Linton [q. v. Suppl.] as an assistant. He soon started an engraving establishment of his own with a large staff, employed in illustrating books ('The Pilgrim's Progress,' 1857; Hans Andersen's 'Tales for Children,' 1861; 'Gulliver's Travels,' 1864, &c.) On 12 July 1855 Thomas married Annie, daughter of the marine painter John Wilson Carmichael (1800-1868) [q. v.] He was himself a painter in water-colours, and an exhibitor from 1860 at the Suffolk Street Gallery; and though he could only devote his leisure to this branch of art, he distinguished himself sufficiently to be elected on 7 Nov. 1864 an associate, and on 3 May 1875 a full member, of the Institute of Painters in Water-colours. He took a keen interest in that society, and was largely instrumental in raising the capital which enabled it to move from Pall Mall to its new quarters in Piccadilly, and in procuring in 1884 the addition of the prefix 'royal' to its title. His scheme for amalgamating the institute with the Royal Water-colour Society was unsuccessful. A collection of Thomas's own work was exhibited in 1882 under the title 'Ten Years' Holiday in Switzerland.'

As an engraver Thomas had done much work for 'The Illustrated London News.' The experience thus gained enabled him to form and carry out a scheme for the foundation of the rival journal with which his name is most closely identified. He raised the necessary capital with the aid of an elder brother, a Brazilian merchant, and other friends, and the first number of the 'Graphic' appeared on 4 Dec. 1869. 'It was a bold idea,' he wrote himself (*Universal Review*, 15 Sept. 1888), 'to attempt a new journal at the price of sixpence a copy in the face of the most successful and firmly established illustrated paper in the world, costing then only fivepence,' but his energy, zeal, and thorough knowledge both of art and business soon ensured the success of the venture. The Franco-German war of 1870-1 gave the 'Graphic' a great opportunity, and in times of peace there was a steady demand for a paper which contained good literary matter and drawings by such artists as Walker, Pinwell, Herkomer, Fildes, Macbeth, Gregory, Houghton, Small, and Green. Thomas had a knack of discovering rising talent, and his journal was

open to all artists, whatever their method, instead of being confined to professional draughtsmen on wood. He had much to do with the introduction of photography as a means of preserving the original drawing from being destroyed in the cutting of the wood-block. He set a high standard of draughtsmanship, and his constant effort was to maintain it and to spare no cost in procuring the best work. He paid large sums to Millais and other eminent painters for Christmas pictures, and the popular 'Graphic Gallery of Shakespeare's Heroines' was due to his initiative.

For twenty years Thomas devoted almost all his time and thought to the 'Graphic,' but a scheme for another enterprise gradually shaped itself in his mind and bore fruit in the foundation in 1890 of the 'Daily Graphic,' the first daily illustrated paper published in England. The difficulties, both mechanical and financial, of such a scheme were enormous, but he overcame them as soon as improvements in process work and in machinery enabled him to get illustrations produced and printed with the requisite speed. The 'Daily Graphic' had its seasons of difficulty, but its founder faced them with imperturbable confidence and left his second paper no less firmly established than the first. Apart from his work as managing director of these journals he took an active interest in the Artists' Benevolent Institution, the Prince of Wales's Hospital Fund, and other philanthropic agencies, and was a strenuous advocate of the Sunday opening of picture galleries and museums. He died at his house at Chertsey on 16 Oct. 1900 and was buried at Woking. His wife and family of nine sons and one daughter survive him. His eldest son, Mr. Carmichael Thomas, succeeded him as managing director of the 'Graphic.' A portrait by Mr. W. Ridley, exhibited at the Royal Academy in 1874, passed into the possession of Mrs. W. L. Thomas.

[Obituary notices, with portraits, in the *Graphic*, 20 Oct. 1900, and the *Daily Graphic*, 18 Oct. 1900; private information.] C. D.

THOMPSON, WILLIAM (1785?-1838), political economist, and by many regarded as the founder of scientific socialism, born about 1785, was a native of county Cork. A wealthy Irish landlord, he was early led to the study of economic problems by contrasting his own affluent position with that of the wretched Irish peasantry. In 1827 he discovered that for twelve years he had been living 'on what is called rent, the produce of the labour of others.'

At an earlier period he had been brought under the influence of the writings of Bentham, and resolved to work out that philosopher's utilitarian principles. Correspondence led to personal acquaintance. A strong attachment grew up between the two men, and at Bentham's request Thompson visited him in London, and lived with him for some years. Thompson was also an enthusiastic supporter of Robert Owen, whose co-operative system he believed to be the means of realising the conception of 'the greatest happiness of the greatest number.' At the same time Thompson closely studied Godwin's 'Political Justice.'

In 1824 Thompson held a public discussion at Cork with one who had acquired a considerable local reputation for 'his skill in the controversies of political economy.' In the result Thompson published in the same year his chief work, 'An Inquiry into the Principles of the Distribution of Wealth most conducive to Human Happiness.' A second edition appeared in 1850, and a third in 1869, edited by William Pare [q. v.] Thompson starts with the assumption that all wealth is the product of labour, which is the sole measure as well as the characteristic distinction of wealth. The three principles he proceeds to lay down are: first, all labour ought to be free and voluntary as to its direction and continuance; secondly, all the products of labour ought to be secured to the producers of them; thirdly, all exchange of these products ought to be free and voluntary.

In working out his theory of the right to the whole produce of labour Thompson does not lose sight of the doctrine of the right to subsistence on the part of the young or of the incapacitated. He did not clearly see the logical difference between the right to the whole produce of labour and the right to subsistence. His object was to prove the injustice of unearned income and private property by the assertion of the former doctrine, 'but the communistic tendencies which he borrowed from Owen prevented him from drawing its positive consequences' (Menger, p. 59). Thompson omitted from his treatise a chapter of a hundred pages on the institutions of society, on the ground that in the then existing state of public opinion his criticism would have caused unnecessary irritation. William Pare, his literary executor, also excluded this chapter from the 1850 and the 1869 editions. It was then probably lost or destroyed.

The fame of Thompson's works rests 'not upon his advocacy of Owenite co-operation, devoted and public-spirited as that was, but

upon the fact that he was the first writer to elevate the question of the just distribution of wealth to the supreme position it has since held in English political economy. Up to his time political economy had been rather commercial than industrial' (Foxwell).

According to Professor Menger, 'from Thompson's book the later socialists, the Saint-Simonians, the Proudhons, and above all Marx and Rodbertus, have directly or indirectly drawn their opinions' (*The Right to the whole Produce of Labour*, Engl. trans. 1899, p. 51). Marx quotes Thompson, although he fails to give him credit for the discovery of the theory of surplus value.

In his 'Distribution of Wealth' Thompson incidentally advocated the equal economic and political rights of men and women. He deplored what he regarded as the fatal consequences of depriving women of the educational advantages enjoyed by men. 'Give men and women,' he says, 'equal civil and political rights.' Thompson expounded his ideas on sexual equality into a volume with the title of 'Appeal of One Half the Human Race, Women, against the Pretensions of the other Half, Men, to retain them in Political, and thence in Civil and Domestic, Slavery' (1825). This work was largely aimed at a passage in James Mill's 'Essay on Government,' and it had great influence in moulding John Stuart Mill's views on the same subject. J. S. Mill met Thompson when he came to London about 1827. Mill notes in his 'Autobiography' (p. 125) that at the free debates held weekly at the Co-operation (Owenite) Society's rooms in Chancery Lane, 'the principal champion on their (the Owenite) side was a very estimable man with whom I was well acquainted, Mr. William Thompson of Cork, author of a book on the distribution of wealth, and of an "Appeal" on behalf of women against the passage relating to them in my father's "Essay on Government."'

Thompson was also the author of the following works: 'Labour Rewarded; The Claims of Labour and Capital Conciliated, or how to secure to Labour the whole Products of its Exertions. By one of the Idle Classes,' London, 8vo, 1827 (see GRAHAM WALLAS, *Life of Francis Place*, pp. 268-9); and 'Practical Directions for the Speedy and Economical Establishment of Communities on the Principles of Mutual Co-operation, United Possessions, and Equality of Exertions, and of the Means of Enjoyment,' London, 8vo, 1830.

For the last twenty years of his life

Thompson was a strict vegetarian and teetotaler. He died of inflammation of the chest at Clounksen, Roscarbery, co. Cork, on 28 March 1833.

Thompson made every endeavour to give practical effect to his views. During his lifetime he gave money to assist the co-operative movement, and made provision for carrying on its propaganda after his death. By a will dated 1830 he bequeathed the bulk of his property, consisting of freehold estates in co. Cork, to trustees for promulgating the principles of Robert Owen, and aiding (says William Parsons, one of his executors) the humbler classes in any practical operations founded on those principles. One clause of his will ran: 'To aid in conquering the foolish but frequently most mischievous prejudices respecting the benevolent—but to the operators most unpleasant and sometimes dangerous—process of examining dead bodies for the benefit of the living, I will that my body be publicly examined by a lecturer on anatomy on condition of his returning the bones in the form of a skeleton, natural or artificial, to be preserved in the Museum of Human and Comparative Anatomy, as my books are to be preserved in the library of the first Co-operative Community in Britain or Ireland.' Thompson's will was disputed by his heir-at-law on the ground that some of its provisions were 'immoral.' The Irish court of chancery took a quarter of a century to decide the point, and ultimately gave judgment in favour of the plaintiffs.

[Leslie Stephen's *English Utilitarians* (1900), ii. 260 seq.; Anton Menger's *Right to the whole Produce of Labour*, English transl. with Introduction by Professor Foxwell, 1899; Holyoake's *Hist. of Co-operation*; J. S. Mill's *Autobiography*, p. 125.]

THORNE, SIR RICHARD THORNE (1841–1899), physician, was the second son of Thomas Henry Thorne, banker, of Leamington, where he was born on 13 Oct. 1841. He was sent to school at Niouwied in Rhenish Prussia, whence he was transferred to France at the age of fourteen, to attend, after a year's schooling there, the *cours de troisième* at the Lycée St.-Louis, Paris, where he gained two first prizes. He then returned to England and became a pupil at the Mill Hill school, from which he matriculated at the London University. He began his medical career as an apprentice to a medical practitioner in Leamington, afterwards entering as a student at St. Bartholomew's Hospital, London. In 1863 he was admitted a member of the Royal College of Surgeons of Eng-

land, and served the office of midwifery assistant at St. Bartholomew's Hospital. In 1865 he became a licentiate of the Royal College of Physicians of London, and in the following year he graduated M.B. at the London University, with first-class honours in medicine and obstetric medicine.

From 1864 to 1866 he acted as junior resident medical officer at the Sussex House Asylum, Hammersmith, and in 1867 he was elected assistant physician to the general dispensary in Bartholomew Close, E.C., a post he resigned in the following year, when he was appointed physician to the Hospital for Diseases of the Chest in the City Road. From 1869 to 1871 he was assistant physician to the London Fever Hospital. He was chosen demonstrator of microscopic anatomy in the medical school of St. Bartholomew's Hospital in 1869, and from April 1870 he filled for a year the office of casualty physician to the hospital.

Thorne was first employed as a supernumerary inspector in the medical department of the privy council in 1868, and in this capacity he conducted several investigations in connection with outbreaks of typhoid fever with such marked ability that in February 1871 he was appointed a permanent inspector. He rose gradually from this position until in 1892 he succeeded to the post of principal medical officer to the local government board on the retirement of Sir George Buchanan [q. v. Suppl.] Thorne's knowledge of French and German, no less than his polished manners and courtly address, soon made him especially acceptable to his political chiefs, and he was repeatedly selected to represent this country in matters of international hygiene. Thus he was the British delegate at the international congresses held at Rome in 1885, at Venice (Paris sitting) in 1892, at Dresden in 1893, at Paris in 1894, at Venice in 1897; and was her majesty's plenipotentiary to sign the conventions of Dresden in 1893, Paris in 1894, and Venice in 1897, the last convention being very largely drawn up under his guidance. His conspicuous services were recognised by the government, who increased his salary in consequence of a recommendation made by a special committee in 1898.

At the Royal College of Physicians of London Thorne was admitted a member in 1867, and was elected a fellow in 1875; he acted as an examiner 1885–89, and was a member of council 1894–96. In 1891 he delivered the Milroy lectures, 'Diphtheria: its Natural History and Prevention.' He began to lecture on hygiene at the medical school of St. Bartholomew's Hospital in 1870,

and was formally appointed there the first permanent lecturer on public health in 1891. He was elected F.R.S. on 5 June 1890, and was awarded the Stewart prize of the British Medical Association in 1893. In 1895 he succeeded Sir John Simon as crown nominee at the General Medical Council, and in 1898 honorary degrees were conferred upon him by the university of Edinburgh, the Royal University of Ireland, and the Royal College of Physicians of Ireland, while his services to public health were recognised by his election as an honorary member of the Royal Academy of Medicine at Rome, corresponding member of the Royal Italian Society of Hygiene, and foreign associate of the Society of Hygiene of France. He was president of the Epidemiological Society from 1887 to 1889, and in 1898 he delivered the Harben lectures 'On the Administrative Control of Tuberculosis.' He was made C.B. in 1892, and K.C.B. in 1897. He died on 18 Dec. 1899, and is buried at St. John's, Woking. He married in 1866 Martha, daughter of Joseph Rylands of Sutton Grange, Hull, by whom he had four children: three sons and a daughter.

Thorne ranks as one of the foremost exponents of the science of public health, both at home and abroad, and he worthily filled the position occupied in succession by Sir Edwin Chadwick, Sir John Simon, and Sir George Buchanan. His acumen first proved that, as had long been suspected, typhoid fever was a water-borne disease. It was his energy that gave an impulse to the establishment of hospitals for the isolation of infectious disease, which are now common in every part of the country. Throughout Europe his name is inseparably connected with attempts to abolish the expensive and tedious methods of quarantine in favour of a higher standard of cleanliness combined with the early and efficient notification of individual cases of epidemic disease.

Almost the whole of Sir Richard Thorne-Thorne's work is recorded in the form of reports in the blue-books of the medical department of the privy council and the local government board. The Milroy lectures on diphtheria were published in 12mo, London, 1891.

[Personal knowledge; British Medical Journal, 1899, ii. 1771, St. Bartholomew's Hospital Journal, vii. 63, and St. Bartholomew's Hospital Reports, vol. xxxvi.; private information.]

D.A. P.

TORRENS, HENRY WHITELOCK (1806-1862), Indian civil servant, was the eldest son of General Sir Henry Torrens [q.v.], and was born at Canterbury on 20 May

1806. He was educated at a private school at Brook Green, and afterwards at the Charterhouse and at Christ Church, Oxford, where he was admitted student in 1823, and matriculated on 16 Dec.; he had the honour to be rusticated along with the Duke of Wellington's sons for painting the doors of the college red. After graduating B.A. in 1828 he began to read for the bar, a profession entirely unsuitable to his mercurial and ebullient temperament. A clerkship in the foreign office was procured for him, but was almost immediately exchanged for an Indian writership, which he was induced to accept by a promise of patronage from Lord William Bentinck, then (1828) on the point of proceeding to India as governor-general. So far as Lord William was concerned the undertaking was redeemed, but kings were to arise who knew not Joseph. It was also most unfortunate for Torrens to have entered the service without having imbibed its spirit and traditions by a previous course at Haileybury. He seemed, however, fully to justify his appointment by his general ability and his rapid progress in the oriental languages, especially Arabic, Persian, and Hindustani. His first appointment was that of assistant to the collector at Meerut, July 1829. By January 1836 he had worked his way into the secretariat, and in 1837 he was in a position, according to Sir John Kaye, to aid Macnaghten and Colvin in bringing about the Afghan war by his personal influence as one of the secretaries in attendance upon Lord Auckland, who was then at Simla, remote from the steady influence of his council at Calcutta. Torrens denied the imputation; it seems clear, however, upon his own showing, that he did recommend interference in the affairs of Afghanistan, although he had not come to the point of advocating an actual British invasion. A recent publication of documents, nevertheless, has proved that Lord Auckland's prudent reluctance was not overcome by the advice of his secretaries, which advice he rejected somewhat cavalierly, but by what he conceived to be an imperative instruction from home (see *SIR AUCKLAND COLVIN'S Life of J. Russell Colvin*).

In 1838 Torrens published that first volume of a translation of the 'Arabian Nights' which chiefly preserves his name as a man of letters. In 1840 he edited C. Lassen's 'Points in the History of the Greek and Indo-Scythian Kings' (Calcutta, 1840, 8vo), and in the same year he was made secretary to the board of customs at Calcutta, and in this capacity effected important reforms in the excise department. In April 1847 he was

officially shelved as agent to the governor-general of Murshidabad. This virtual extinction of one of the most brilliant men in the service was attributed to the jealousy of a clique, but no further explanation seems necessary than the fact, admitted by Torrens's biographer, that he disliked his vocation and made few friends among his colleagues. If another reason is required, it may be found in the indiscretion of which his writings afford sufficient proof. Among them, for instance, is a squib in the style of Blackwood's 'Chaldee Manuscript' on an occurrence which had created much stir in Calcutta, extremely clever and amusing, but which must have made an enemy of one of the most influential personages in Bengal, supposing that he had not been made one already. In his latter days Torrens turned as much as he could from official life to literature, producing 'Madame de Malguet' (London, 1848, 8 vols. 12mo), a novel founded on youthful experiences in France, so greatly admired by the veteran Miss Edgeworth that she wrote to the publishers to ascertain the author; and 'Remarks on the Scope and Uses of Military Literature and History,' a book highly eulogised by his biographer; it began to appear in the 'Eastern Star' in January 1846, and was subsequently reissued in book form. No copy of it is in the British Museum Library, but copious extracts are reprinted in the 'Collected Writings' (ed. Hume). He also contributed a number of papers to the Royal Asiatic Society's Journal. He died at Calcutta from the effects of climate on 16 Aug. 1852.

Torrens's dispersed literary remains were collected and printed at Calcutta, and published in London by J. Hume in 1854. They justify his character for wit and brilliancy, but are too slight and occasional to survive, and the unquestionable merits of his novel have not preserved it from oblivion. His literary reputation must rest on his translation of the 'Arabian Nights,' unfortunately unfinished, but pronounced superior to all later versions in virtue of 'that literary instinct and feeling which is more necessary even than scholarship to the successful translator' (*Nation*, New York, 1900, ii. 187).

[Torrens's Works in Brit. Museum Library; Memoir by J. Hume, prefixed to his edition of Torrens's literary remains; Kaye, History of the War in Afghanistan, vol. i.; Gent. Mag. 1852, ii. 546; New York Nation, 30 Aug. and 6 Sept. 1900.]

R. G.

TORRY, PATRICK (1768-1852), bishop of St. Andrews, Dunkeld, and Dunblane, born on 27 Dec. 1763, in the parish of King

Edward, Aberdeenshire, was son of Thomas Torry, a woollen cloth manufacturer at Garneston, and his wife, Jane Watson, daughter of a farmer in the same parish. He was educated as a member of the established presbyterian church of Scotland, but his uncle James Watson, a Jacobite, who had been out in 1745, impressed episcopalian views upon him, and after mastering Latin, Greek, Hebrew, and mathematics, Torry at the age of eighteen began teaching, first in Selkirk parish school, under his uncle, and then at Lonmay, Aberdeenshire. In June 1782 he went to live with John Skinner (1721-1807) [q. v.], who completed his conversion to episcopalianism, and in the following September he was ordained deacon of the Scottish episcopal church by Bishop Robert Kilgour of Aberdeen. Though only nineteen years old, he was at once put in charge of a congregation at Arradoul, in Rathven parish, Banffshire, and in 1788 he was ordained priest. In 1787 he married Kilgour's daughter, Christian, who died without issue in 1789; in that year Torry became Kilgour's assistant in his charge at Peterhead, and on Kilgour's death in 1791 Torry succeeded to his charge, which he held until 1837. In 1807 he was made treasurer of the Scottish Episcopal Friendly Society, and on 6 Oct. 1808 he was elected bishop of Dunkeld, in succession to Jonathan Watson; he retained his pastoral charge at Peterhead, where he resided, George Gloig [q. v.] was originally chosen bishop, but the hostility of Bishop John Skinner (1744-1816) [q. v.] kept Gloig out of the see.

Torry retained his bishopric for forty-four years; in 1837 he resigned his charge of the congregation at Peterhead, though he continued to reside there, and in September 1841, by the death of Bishop James Walker [q. v.], he became pro-primus of the episcopal church of Scotland. In a synod held at Edinburgh in September 1814, it was decided to revive the episcopal title of St. Andrews, and Torry was henceforth known as bishop of the united dioceses of St. Andrews, Dunkeld, and Dunblane. The most important incident of his episcopate was the publication in April 1850 of his 'Prayer-book,' which claimed to be the embodiment of the usage of the episcopal church of Scotland. Torry had throughout his life been a staunch champion of the Scottish communion office, which was derived, through Laud's prayer-book of 1637, from the first prayer-book of Edward VI, and was used by the Scottish non-jurors until the death of Prince Charles in 1788, when

they took the oath to George III, and were joined by the English episcopalian congregations in Scotland. The latter, while becoming members of the Scottish episcopalian church, retained the use of the English prayer-book, which did not inculcate such avowedly high-church doctrines as that used by the Scottish non-jurors. In 1847 a petition was presented to Torry from some of his clergy that he would supervise the compilation of a service-book comprising the ancient usages of the Scottish episcopalian church; and this book, which was known as Torry's 'Prayer-book,' was recommended by him and published in April 1850, as though it claimed to be the authorised service-book of the Scottish episcopal church. A storm of opposition led by Charles Wordsworth [q. v.] at once arose; only two out of seven bishops and one out of seven deans were in the habit of using the Scottish communion offices recommended by Torry; and it contained usages not sanctioned by any canon. The publication was at once censured by the Scottish episcopal synod, by St. Andrews diocesan synod, on 19 June 1850, and again, after Torry had published a protest, by the episcopal synod on 5 Sept. The suppression of this prayer-book made it a rare work, and there does not appear to be a copy in the British Museum; the distinctive passages in it are printed in the appendix to J. M. Neale's 'Life and Times of Bishop Torry' (cf. Wordsworth, *Episcopate of Charles Wordsworth*, pp. 345-9).

Other questions on which Torry came into conflict with his episcopal colleagues were the support he gave to Bishop Michael Lucombe [q. v.], and his favourable reception of the appeal of William Palmer (1811-1879) [q. v.] He welcomed the foundation of Glenalmond College within his diocese, and assisted towards the building of St. Ninian's Cathedral, Perth, the statutes of which he formally approved on 6 Jan. 1851. Torry died at Peterhead on 3 Oct. 1852, and was buried in St. Ninian's Cathedral on the 13th. He married in September 1791 his second wife Jane, daughter of Dr. William Young of Fawcayde, Kincairdineshire, and by her had issue three sons and four daughters, of whom the oldest son John became dean of St. Andrews.

TRAILL, HENRY DUFF (1842-1900), author and journalist, belonged to the Traills of Rattar, an old family long settled in the county of Caithness and in the Orkneys. He was sixth and youngest son of James Traill, for some time stipendiary magistrate at the Greenwich and Woolwich police-court, and of Caroline, daughter of William Whateley, of Handsworth, Staffordshire. His uncle, George Traill, represented Orkney and Caithness in parliament as a liberal for nearly forty years till 1869.

Henry Duff Traill was born at Morden Hill, Blackheath, on 14 Aug. 1842. He was educated from April 1853 at Merchant Taylors' School, where he was distinguished for his attainments both in classics and mathematics, particularly the former. As head of the school he was elected to St. John's College, Oxford, in Michaelmas term, 1861, and subsequently obtained one of the last of the close fellowships then reserved on the foundation for Merchant Taylors' scholars. He took a first class in classical moderations in 1863, but after passing moderations he took up the study of natural science, with a view to the medical profession, and obtained a second class in the final schools in that subject in 1865. He graduated B.A. in that year, B.O.L. in 1868, and D.C.L. in 1873. On leaving the university he abandoned his scientific intentions and was called to the bar at the Inner Temple in 1869. In 1871 he was appointed an inspector of returns under the education office. But literature, or at least the periodical form of it, soon attracted, and presently absorbed, him. His earliest journalistic connection was with the 'Yorkshire Post,' and, after settling down regularly in London, he contributed occasionally to several other newspapers. In 1873 he joined the staff of the 'Pall Mall Gazette,' then conducted by Mr. Frederick Greenwood, and subsequently migrated to the 'St. James's Gazette' on the foundation of that journal in 1880. He wrote much and brilliantly during this period in the 'Saturday Review,' contributing political 'leaders,' literary reviews, and essays. He also wrote verses, some of which were republished under the titles of 'Re-captured Rhymes' (1882) and 'Saturday Songs' (1890). With a few exceptions

these pieces are in the humorous or satirical vein and deal with topics of the day; but one, called 'The Ant's Nest,' is deeply serious, and deserves to take rank among the finest philosophical and reflective poems of the last twenty years of the nineteenth century. Traill's remarkable gift of parody, in prose as well as in metre, was exhibited by an anonymous pamphlet, published in 1876, called 'The Israelitish Question and the Comments of the Canaan Journal thereon,' in which the style of the leading London newspapers was cleverly burlesqued.

In 1882 he quitted the 'St. James's Gazette' and joined the staff of the 'Daily Telegraph,' with which journal he was closely associated as chief political leader-writer till 1897. He continued to contribute to the 'Saturday Review,' and after 1888 he again wrote for the 'St. James's.' In 1889 he became editor of the 'Observer,' a post he retained for about two years. In 1897 he became the first editor of 'Literature,' and held this position at the time of his death. He furnished a good many critical essays, political articles, and occasional short stories and satirical skits, to various monthly magazines and reviews.

During those years of versatile and strenuous journalism, Traill was also publishing books on a variety of historical, literary, and political subjects. In 1881 he wrote a short account of our constitutional system, called 'Central Government' ('English Citizen' series). To the 'English Men of Letters' series of literary biographies he contributed brief but excellent memoirs of Sterne (1882) and Coleridge (1884); and he also wrote monographs on Shaftesbury (1880), William III (1888), Strafford (1889), the Marquis of Salisbury (1891), and Lord Cromer (1897). The literary studies were more successful than the political; for Traill was a fine and penetrating critic rather than a trained historian. But everything he wrote was couched in the same admirable style—easy, fluent, dignified, and correct—which never seems to have deteriorated under the constant strain of daily journalism. A more elaborate biography than those just enumerated was the 'Life of Sir John Franklin' (1896). The work was executed by Traill after a thorough study of the materials placed at his disposal, and it is an adequate—indeed the only adequate—account of the great Arctic explorer. Between 1893 and 1897 he acted as editor of an elaborate compilation in six volumes, called 'Social England,' which was intended to be an historical account of the social, industrial, and political development of the nation. But he is at his best as a satirist of intellectual

foibles, or a speculator, half playful and half melancholy, on the problems of life. These qualities are exhibited in his collections of literary and miscellaneous essays, 'Number Twenty' (1892) and 'The New Fiction' (1897), and particularly in the most remarkable of his works, 'The New Lucian.' This is a series of 'Dialogues of the Dead,' full of wit, pathos, and insight. It gives a better idea of the author's brilliancy and scholarship, his humour and his irony, than anything else he wrote. 'The New Lucian' was published in 1884; a second edition, with some supplementary dialogues and a touching dedication, was issued a few days before the author's death in February 1900.

Traill made several attempts at dramatic composition. He acted and wrote plays for private representation at school and at Oxford. Satirical dramatic sketches by him, called 'Present versus Past' and 'The Battle of the Professors,' were performed at Merchant Taylors' School in June 1869 and June 1874. He wrote a drama, 'The Diamond Seeker,' in the early seventies which was privately printed. It is a gloomy rhetorical tragedy in prose and blank verse of no great literary merit. On 5 July 1865 Traill's 'New and Original Extravaganza,' entitled 'Clausius: a Tale of a Fish,' was performed at the Olympic Theatre, with the popular burlesque actress, Miss Ellen Farren, in the title rôle. His most ambitious dramatic effort was a play called 'The Medicine Man,' written in collaboration with Mr. Robert Hichens. It was produced by Sir Henry Irving at the Lyceum Theatre on 4 May 1898, and ran for about four weeks.

In private life Traill was one of the most agreeable of companions, and in the company of intimate friends a delightful conversationalist. But his incessant journalistic and literary activity, combined with a constitutional shyness and reserve, prevented him from taking much part in society. He found relief from the strain of constant composition in an occasional trip abroad. He was fond of the Mediterranean countries. In 1893 and in 1895 he visited Egypt. The second of those journeys he described in a series of animated letters to the 'Daily Telegraph,' afterwards republished as a book, 'From Cairo to the Soudan' (1896). A general account of the recent history of North-Eastern Africa, written by him in the last year of his life, was published posthumously under the title 'England, Egypt, and the Soudan' (1900).

Death took him unexpectedly in the full tide of his various projects and occupations. He died at the Great Western Hotel, Pad-

dington, on 21 Feb. 1900, from a sudden attack of heart disease. He was buried on 26 Feb. 1900 in the Paddington cemetery, Kilburn. A portrait of H. D. Traill, painted by Sydney P. Hall, was exhibited at the New Gallery in 1889.

[Times, 22 Feb. 1900; Observer, 25 Feb. 1900; Literature, 3 March, 1900.] S. J. L.

TUER, ANDREW WHITE (1888-1900), publisher and writer on Bartolozzi, son of Joseph Tuer by his marriage with Jane Taft, was born at Sunderland on 24 Dec. 1838. His parents died when he was a child, and he lived chiefly with a great-uncle, Andrew White, for many years M.P. for Sunderland, after whom he had been named. He was educated at Newcastle-on-Tyne and at Dr. Bruce's school at York. He was destined at first for holy orders, and then for the medical profession; but after expending some time at a London hospital he abandoned medicine for printing, in which he had already made experiments as an amateur. In 1862 he entered into partnership with Mr. Field, stationer and printer in Nicholas Lane. Under Tuer's auspices ornamental printing was added to the business, which was removed to the Minories and, about 1868, to Leadenhall Street. Tuer's invention of 'stickphast' paste largely increased the revenues of the firm, and the 'Paper and Printing Trades' Journal,' a quarterly founded in 1877, and for some years edited by him, was a successful venture. He then commenced publisher and author, his first book being an illustrated work on 'Luxurious Bathing,' 1879. The publishing firm of Field & Tuer, which issued many illustrated books, and especially facsimile reprints of popular literature and children's books of the reign of George III, was converted in February 1892, a year after Field's death, into a limited company under the name of the Leadenhall Press. In July 1899 Tuer became a director of the firm of Kelly, publishers of the post-office directory.

He was an omnivorous collector, and filled the fine house which he had built on Campden Hill with books, engravings, clocks, china, silver, and bric-à-brac of the most varied description, but chiefly of the eighteenth century. He did much, by writing and by example, to foster that admiration for the stipple engravings of Bartolozzi and his school, which rose to a mania in the last decade of the nineteenth century and forced up the prices of such engravings, especially when printed in colours, beyond reasonable limits. The

greater part of his own collection of engravings was sold at Christie's in two portions, on 12 April 1881 and 22 April 1884.

His chief literary work, 'Bartolozzi and his Works,' contains not only a great amount of information on Bartolozzi and his contemporaries and pupils, but practical hints to collectors and many explanations of technical matters in a popular and pleasant form. No book on the subject of engravings is more readable, but it is discursive and unsystematic in its arrangement, and does not satisfy the demands of the serious student. Its great defect is the absence of a catalogue of Bartolozzi's works. Tuer had intended to produce one, and no writer was better qualified for the task; but the provisional list of the engravings, still the fullest in existence, which was included in the first edition of 1882, was withdrawn from the second edition of 1886, and the complete catalogue which was then promised in its place was never written. The collector's zeal was diverted to other objects, the nature of which is sufficiently indicated by the titles of his later books.

Tuer became a fellow of the Society of Antiquaries in January 1890. He was an amateur of music, as of other forms of art, and possessed a fine tenor voice. He married, on 10 Oct. 1867, Thomasine Louisa, youngest daughter of Samuel John Louttit, controller of accounts in the tea office at the custom house, London. There were no children by the marriage. Mrs. Tuer survived her husband, who died at 18 Campden Hill Square on 24 Feb. 1900.

Tuer's published works are: 1. 'Luxurious Bathing,' fol. 1879. 2. 'Bartolozzi and his Works,' fol. 1882, 2 vols.; 2nd edit. with additional matter, 1886, 1 vol. 8vo. 3. 'London Cries,' 1883, 4to. 4. 'Old London Street Cries and the Cries of To-day,' 1885, 10mo. 5. 'The Follies and Fashions of our Grandfathers,' 1886, 8vo. 6. 'History of the Horn-Book,' 1896, 2 vols. 8vo; 2nd edit. 1897, 1 vol. 8vo. 7. 'Pages and Pictures from Forgotten Children's Books,' 1898, 8vo. 8. 'Stories from Old-fashioned Children's Books,' 1900, 8vo.

He also contributed prefaces or introductions to Nash's 'Catalogue of a Loan Collection of Engravings by Bartolozzi,' 1883; 'Bygone Beauties painted by Hoppner,' 1883; Lamb's 'Prince Dorus,' 1884; 'The Book of Delightful and Strange Designs' (Japanese stencil plates), 1893, and other works.

V

VAUGHAN, HENRY (1800-1809), art collector, son of George Vaughan and Elizabeth Androws, his wife, was born on 17 April 1809 in Southwark, where his father carried on a successful business as a hat manufacturer. He was privately educated, and in 1828, on the death of his father, succeeded to a large fortune. He travelled much and became a cultivated and enthusiastic collector of works of art, both ancient and modern, with a special predilection for the works of Turner, Stothard, Flaxman, and Constable. Of water-colour drawings by Turner, with whom he was personally acquainted, he formed a singularly fine series, and also of proofs of his 'Liber Studiorum.' He was elected a member of the Athenæum Club in 1840, and F.S.A. in 1870. He was one of the founders and most active members of the Burlington Fine Arts Club, and a constant contributor to its exhibitions. In 1886 he presented the celebrated 'Hay Wain' of Constable to the National Gallery, and in 1887 some fine drawings by Michelangelo to the British Museum. He died, unmarried, at 28 Cumberland Terrace, Regent's Park, where he had resided since 1834, on 26 April 1899. By his will Vaughan distributed the whole of his art collections among public institutions, the list of his specific bequests occupying more than thirty folios (*Times*, 3 Jan. 1900). To the National Gallery he left his oil paintings, a series of Turner's original drawings for 'Liber Studiorum,' and studies by Reynolds, Leslie, and Constable. The British Museum received his drawings by old masters; a large collection of studies by Flaxman and finished water-colours by Stothard and other English artists; also such of the 'Liber Studiorum' proofs as might be required. To the Victoria and Albert Museum he assigned his collections of stained glass and carved panels, and several drawings by Turner. The remainder of the Turner drawings he divided between the National Gallery of Ireland and the Royal Institution for the Encouragement of the Fine Arts, Edinburgh. Some drawings by Flaxman, Stothard, and De Wint, the etchings by Rembrandt, and the remainder of the 'Liber Studiorum' went to University College, London. Vaughan bequeathed the bulk of his fortune to charitable and religious societies.

[*Times*, 27 Nov. 1899, 3 Jan. 1900, and 8 May 1901; *Athenæum*, 1899, ii. 767; private information.]
F. M. O'D.

VICTOR FERDINAND FRANZ EUGEN GUSTAF ADOLF CONSTANTIN FRIEDRICH OF HOHENLOHE-LANGENBURG, PRINCE, for many years known as **COUNT GLEICHEN** (1838-1891), admiral and sculptor, was third and youngest son of Prince Ernest of Hohenlohe-Langenburg and of Princess Féodore, only daughter of Emich Charles, reigning Prince of Leiningen, by Princess Victoria of Saxo-Coburg-Saalfeld, afterwards Duchess of Kent. His mother was therefore half-sister to Queen Victoria. Born at the castle of Langenburg in Wurtemberg on 11 Nov. 1838, Prince Victor was sent to school at Dresden, from which he ran away. Through the interest of Queen Victoria he was put into the British navy, entering as a midshipman on H.M.S. *Powerful* in 1848. He served in H.M.S. *Cumberland*, the flagship of Admiral Sir George Seymour on the North American station. During the expedition to the Baltic in 1854 he was slightly wounded at Bomarsund. He was next appointed to H.M.S. *St. Jean d'Acre* off Sevastopol, and afterwards transferred to the naval brigade, doing duty in the trenches. As aide-de-camp to Sir Harry Keppel he was present at the battle of the Tchernaya, and was distinguished for his bravery under fire. In 1859 he was appointed flag-lieutenant to Sir Harry Keppel in China, and took a prominent part in the fighting, being recommended for the Victoria Cross. Repeated illnesses, however, undermined his constitution, and prevented him from earning fresh distinction in the navy. He was compelled for this reason to retire on half-pay in 1866. He was created K.O.B. in Jan. 1866, and appointed by the queen to be governor and constable of Windsor Castle. On 26 Jan. 1861 Prince Victor married Laura Williamina, youngest daughter of Admiral Sir George Francis Seymour [q. v.] By an old law in Germany, relating to reigning families, Prince Victor's wife, not being of equal rank, was disqualified from using her husband's title. In consequence Prince Victor assumed the title of Count Gleichen, the second title in the family, by which he was known for many years. After he retired from the navy Count Gleichen devoted himself to an artistic career, for which he had considerable talent. Being fond of

modelling, he studied for three years under William Theod [q. v.] Loss of fortune, owing to the failure of a bank, caused him to look to sculpture as a serious profession. He had been granted by Queen Victoria a suite of apartments in St. James's Palace, where he set up a studio and entered into regular competition as a working sculptor. He executed several imaginative groups, as well as monuments and portrait busts. Some of the busts were very successful, notably those of the Earl of Beaconsfield, the Marquis of Salisbury, and Sir Harry Keppel. His most important work, however, was a colossal statue of Alfred the Great, executed for the town of Wantage, where it was erected. He was enabled by his success as a sculptor to build himself a small house near Ascot. In 1886 Count and Countess Gleichen were permitted by the queen to revert to the names of Prince and Princess Victor of Hohenlohe-Langenburg. Prince Victor died on 31 Dec. 1891. He had in 1837 been promoted to be G.C.B. and an admiral on the retired list.

He left one son, Count Albert Edward Wilfred Gleichen, O.M.G., major in the Grenadier guards, and three daughters, of whom the eldest, Countess Fédore Gleichen, inherited her father's skill in sculpture.

[Private information.]

L. O.

VICTORIA, QUEEN OF THE UNITED KINGDOM OF GREAT BRITAIN AND IRELAND and EMPRESS OF INDIA (1819-1901), was granddaughter of George III, and only child of George III's fourth son Edward, duke of Kent, K.G., G.C.B., field-marshal.

I

Princess Charlotte Augusta of Wales, only child of the Prince Regent (George III's heir), having married Prince Leopold of Saxe-Coburg on 2 May 1816, died after the birth of a stillborn son on 6 Nov. 1817. The crown was thereby deprived of its only legitimate representative in the third generation.

Of the seven sons of George III who survived infancy three, at the date of Princess Charlotte's death, were bachelors, and the four who were married were either childless or without lawful issue. With a view to maintaining the succession it was deemed essential after Princess Charlotte's demise that the three unmarried sons—William, duke of Clarence, the third son; Edward, duke of Kent, the fourth son; and Adolphus Frederick, duke of Cambridge, the seventh and youngest son—should marry without delay. All were middle-aged. In

The succession to the crown in 1817.

each case the bride was chosen from a princely family of Germany. The weddings followed one another with rapidity. On 7 May 1818 the Duke of Cambridge, who had long resided in Hanover as the representative of his father, George III, in the government there, married, at Cassel, Augusta, daughter of Frederick, Landgrave of Hesse-Cassel. On 11 June 1818 the Duke of Clarence married in his fifty-third year Adelaide, eldest daughter of George Frederick Charles, reigning duke of Saxe-Meiningen. In the interval, on 29 May, the Duke of Kent, who was in his fifty-first year, and since 1816 had mainly lived abroad, took to wife a widowed sister of Prince Leopold of Saxe-Coburg, the widowed husband of that Princess Charlotte whose death had induced so much matrimonial activity in the English royal house.

The Duke of Kent's bride, who was commonly known by the Christian name of Victoria, although her full Christian name were Mary Louisa Victoria, was nearly thirty-two years old. She was fourth daughter and youngest of the eight children of Francis Frederick Antony (1750-1806), reigning duke of Saxe-Coburg and Saalfeld. (In 1825 Saalfeld, by a family arrangement, was exchanged for Gotha.) Her first husband was Ernest Charles, reigning prince of Leiningen, whose second wife she became on 21 Sept. 1803, at the age of seventeen; he died on 4 July 1814, leaving by her a son and a daughter. For the son, who was born on 12 Sept. 1804, she was acting as regent and guardian when the Duke of Kent proposed marriage to her. Her responsibilities to her first family and to the principality of Leiningen made her somewhat reluctant to accept the duke's offer. But her father's family of Saxe-Coburg was unwilling for her to neglect an opportunity of reinforcing those intimate relations with the English reigning house which the Princess Charlotte's marriage had no sooner brought into being than her premature death threatened to extinguish.

The Dowager Princess of Leiningen consequently married the Duke of Kent, and the ceremony took place at the ducal palace of Coburg. The princess was a cheerful woman of homely intellect and temperament, with a pronounced love of her family and her fatherland. Her kindred was exceptionally numerous; she maintained close relations with most of them, and domestic interests thus absorbed her attention through life. Besides the son and daughter of her first marriage, she had three surviving brothers and three sisters, all of whom married, and all but one of whom had issue. Fifteen

nephews and three nieces reached maturity, and their marriages greatly extended her family connections. Most of her near kindred allied themselves in marriage, as she in the first instance had done, with the smaller German reigning families. Her eldest brother, Ernest, who succeeded to the duchy of Saxe-Coburg, and was father of Albert, prince consort of Queen Victoria, twice married princesses of small German courts. A sister, Antoinette Ernestine Amelia, married Alexander Frederick Charles, duke of Württemberg. At the same time

Her family connections.

some matrimonial unions were effected by the Saxe-Coburg family with the royal houses of Latin countries—France and Portugal. One of the Duchess of Kent's nephews married the queen of Portugal, while there were no fewer than five intermarriages on the part of her family with that of King Louis Philippe: two of her brothers and two of her nephews married the French king's daughters, and a niece married his second son, the Duc de Nemours. Members of the Hanoverian family on the English throne had long been accustomed to seek husbands or wives at the minor courts of Germany, but the private relations of the English royal house with those courts became far closer than before through the strong family sentiment which the Duchess of Kent not merely cherished personally but instilled in her daughter, the queen of England. For the first time since the seventeenth century, too, the private ties of kinship and family feeling linked the sovereign of England with rulers of France and Portugal.

The Duke of Kent brought his bride to England for the first time in July 1818, and the marriage ceremony was repeated at Kew Palace on the 11th of that month. The duke received on his marriage an annuity of 6,000*l.* from parliament, but he was embarrassed by debt, and his income was wholly inadequate to his needs. His brothers and sisters showed no disposition either to assist him or to show his duchess much personal courtesy. He therefore left the country for Germany and accepted the hospitality of his wife, with whom and with whose children by her former marriage he settled at her dower-house at Amorbach in her son's principality of Leiningen. In the spring of 1819 the birth of a child grew imminent. There was a likelihood, although at the

Queen Victoria's birth.

moment it looked remote, that it might prove the heir to the English crown; the duke and duchess hurried to England so that the birth might take place on English soil. Apart-

ments were allotted them in the palace at Kensington, in the south-east wing, and there on Monday, 24 May 1819, at 4.15 in the morning, was born to them the girl who was the future Queen Victoria. A gilt plate above the mantelpiece of the room still attests the fact. The Duke of Kent, while describing his daughter as 'a fine healthy child,' modestly deprecated congratulations which anticipated her succession to the throne, 'for while I have three brothers senior to myself, and one (i.e. the Duke of Clarence) possessing every reasonable prospect of having a family, I should deem it the height of presumption to believe it probable that a future heir to the crown of England would spring from me.' Her mother's mother, the Duchess of Saxe-Coburg-Saalfeld, wrote of her as 'a Charlotte—destined perhaps to play a great part one day.' 'The English like queens,' she added, 'and the niece [and also first cousin] of the ever-lamented beloved Charlotte will be most dear to them.' Her father remarked that the infant was too healthy to satisfy the members of his own family, who regarded her as an unwelcome intruder. The child held, in fact, the fifth place in the succession. Between her and the crown there stood her three uncles, the Prince Regent, the Duke of York, and the Duke of Clarence, besides her father the Duke of Kent. Formal honours were accorded the newly born princess as one in the direct line. The privy councillors who were summoned to Kensington on her birth included her uncle, the Duke of Sussex, the Duke of Wollington, the Marquis of Lansdowne, and two leading members of Lord Liverpool's tory ministry, Canning and Vansittart. On 24 June her baptism took place in the grand saloon at Kensington Palace. The gold font, which was part of the regalia of the kingdom, was brought from the Tower, and crimson velvet curtains from the chapel at St. James's. There were three sponsors, of whom the most interesting was the tsar, Alexander I, the head of the Holy Alliance and the most powerful monarch on the continent of Europe. The regent and the tory prime minister, Lord Liverpool, desired to maintain friendly relations with Russia, and the offer of Prince Lieven, Russian ambassador in London, that his master should act as sponsor was accepted with alacrity. The second sponsor was the child's eldest aunt, the queen of Württemberg (princess royal of England), and the third her mother's mother, the Duchess of Saxe-Coburg-Saalfeld. The three were represented respectively by the infant's uncle, the Duke of York, and her

aunts, the Princess Augusta and the Duchess of Gloucester. The rite was performed by Dr. Mannere Sutton, archbishop of Canterbury, assisted by the bishop of London. The prince regent, who was present, declared that the one name of 'Alexandrina,' after the tear, was sufficient. The Duke of Kent requested that a second name should be added. The prince regent suggested 'Georgina.' The Duke of Kent urged 'Elizabeth.' Thereupon the regent brusquely insisted on the mother's name of Victoria, at the same time stipulating that it should follow that of Alexandrina. The princess was therefore named at baptism Alexandrina Victoria, and for several years was known in the family circle as 'Drina.' But her mother was desirous from the first to give public and official prominence to her second name of Victoria. When only four the child signed her name as Victoria to a letter which is now in the British Museum (Addit. MS. 18204, fol. 12). The appellation, although it was not unknown in England [see CLARKE, Mrs. MARY VICTORIA COWDEN, Suppl.], had a foreign sound to English ears, and its bestowal on the princess excited some insular prejudice.

When the child was a month old her parents removed with her to Claremont, the residence which had been granted for life to her uncle, Prince Leopold, the widowed husband of the Princess Charlotte, and remained his property till his death in 1865. In August the princess was vaccinated, and the fact of her being the first member of the royal family to undergo the operation widely extended its vogue. Before the end of the month the Duchess of Kent learned from her mother of the birth on the 20th, at Rossau in Coburg, of the second son (Albert) of her eldest brother, the reigning Duke of Saxe-Coburg-Saalfeld (afterwards Gotha). Madame Siebold, the German accoucheuse, who had attended Princess Victoria's birth, was also present at Prince Albert's, and in the Saxe-Coburg circle the names of the two children were at once linked together. In December 1819 the Duke and Duchess of Kent went with their daughter to Sidmouth, where they rented a small house called Woolbrook Cottage. The sojourn there did not lack incident. The discharge of an arrow by a mischievous boy at the window of the room which the infant was occupying went very near ending her career before it was well begun. After a few weeks at Sidmouth, too, the child's position in the state underwent momentous change.

On 29 Jan. 1820 her grandfather, King

George III, who had long been blind and imbecile, passed away, and the prince regent became king at the age of fifty-eight. Nine days earlier, on 20 Jan. 1820, her father, the Duke of Kent, fell ill of a cold contracted while walking in wet weather; inflammation of the lungs set in, and on the 23rd he died. Thus the four lives that had intervened between the princess and the highest place in the state were suddenly reduced to two—those of her uncles, the Duke of York, who was fifty-seven, and the Duke of Clarence, who was fifty-five. Neither duke had a lawful heir, or seemed likely to have one. A great future for the child of the Duchess of Kent thus seemed assured.

This immediate position of mother and daughter was not, however, enviable. The Duke of Kent appointed his widow sole guardian of their child, with his friends General Wetherall and Sir John Conroy as executors of his will. Conroy thenceforth acted as major-domo for the duchess, and lived under the same roof until the accession of the princess, by whom he was always cordially disliked. The duchess was obnoxious to her husband's brothers, especially to the new king, to the Duke of Clarence, and to their younger brother, the Duke of Cumberland, the next heir to the throne after her daughter. Speaking later of her relations with the heads of the royal family, she said that on her husband's death she stood with her daughter 'fiendless and alone.' Not the least of her trials was her inability to speak English. Although the duke had made a will, he left no property. He only bequeathed a mass of debts, which the princess, to her lasting credit, took in course of time on her own shoulders and discharged to the last penny. Parliament had granted the duchess in 1818 an annuity of 6,000*l.* in case of her widowhood; apartments were allowed her in Kensington Palace, but she and her daughter had no other acknowledged resources. Her desolate lot was, however, not without private mitigation. She had the sympathy of her late husband's unmarried sisters, Sophia and Augusta, who admired her self-possession at this critical period; and the kindly Duchess of Clarence, who, a German princess, like herself, conversed with her in her mother-tongue, paid her constant visits. But her main source of consolation was her brother Leopold, who proved an invaluable adviser and a generous benefactor. As soon as the gravity of the duke's illness declared itself he had hurried to Sidmouth to

Kent.

console and counsel her. Deprived by death some four years before of wife and child, he had since led an aimless career of travel in England and Scotland, without any recognised position or influence. It was congenial to him to assume informally the place of a father to the duke's child. Although his German education never made him quite at home in English politics, he was cautious and far-seeing, and was qualified for the rôle of guardian of his niece and counsellor of his sister. He impressed the duchess with the destiny in store for her youngest child. Her responsibilities as regent of the principality of Leiningen in behalf of her son by her first marriage weighed much with her. But strong as was her affection for her German kindred, anxious as she was to maintain close relations with them, and sensitive as she was to the indifference to her manifested at the English court, she, under Leopold's influence, resigned the regency of Leiningen, and resolved to reside permanently in England. After deliberating with her brother, she chose as 'the whole object of her future life' the education of her younger daughter, in view of the likelihood of her accession to the English throne. Until the princess's marriage, when she was in her twenty-first year, mother and daughter were never parted for a day.

Of her father the princess had no personal remembrance, but her mother taught her to honour his memory. Through his early life he had been an active soldier in Canada and at Gibraltar, and he was sincerely attached to the military profession. When his daughter, as Queen Victoria, presented new colours to his old regiment, the royal Scots, at Ballater on 26 Sept. 1876, she said of him: 'He was proud of his profession, and I was always told to consider myself a soldier's child.' Strong sympathy with the army was a main characteristic of her career. Nor were her father's strong liberal, even radical, sympathies concealed from her. At the time of his death he was arranging to visit New Lanark with his wife as the guests of Robert Owen, with whose principles he had already declared his agreement (OWEN, *Autobiography*, 1867, p. 287). The princess's whiggish proclivities in early life were part of her paternal inheritance.

It was in the spring of 1820 that the Duchess of Kent took up her permanent abode in Kensington Palace, and there in comparative seclusion the princess spent most of her first eighteen years of life. Kensington was then effectually cut off from London by market gardens and country lanes. Besides her infant daughter the duchess had another companion in her child by her first

husband, Princess Féodore of Leiningen, who was twelve years Princess Victoria's senior, and inspired her with deep and lasting affection. Prince Charles of Leiningen, Princess Victoria's stepbrother, was also a frequent visitor, and to him also she was much attached. Chief among the permanent members of the Kensington household was Louise Lehzen, the daughter of a Lutheran clergyman of Hanover, who had acted as governess of the Princess Féodore from 1818. Princess Victoria's education was begun in 1824, when Fraulein Lehzen transferred her services from the elder to the younger daughter. Voluble in talk, severe in manner, restricted in information, conventional in opinion, she was never popular in English society; but she was shrewd in judgment and whole-hearted in her devotion to her charge, whom she at once inspired with affection and fear, memory of which never wholly left her pupil. Long after the princess's girlhood close intimacy continued between the two. At Lehzen's death in 1870 the queen wrote of her: 'She knew me from six months old, and from my fifth to my eighteenth years devoted all her care and energies to me with most wonderful abnegation of self, never even taking one day's holiday. I adored, though I was greatly in awe of her. She really seemed to have no thought but for me.'

The need of fittingly providing for the princess's education first brought the child to the formal notice of parliament. In 1826 parliament unanimously resolved to allow the Duchess of Kent an additional 6,000*l.* a year 'for the purpose of making an adequate provision for the honourable support and education of her highness Princess Alexandra Victoria of Kent' (*Hansard*, new ser. xiii. 909-27). English instruction was needed, and Fraulein Lehzen, whose position was never officially recognised, was hardly qualified for the whole of the teaching. On the advice of the Rev. Thomas Russell, vicar of Kensington, the Rev. George Davys, at the time vicar of a small Lincolnshire parish—from which he was soon transferred to the crown living of All Hallows-on-the-Wall, in the city of London—became the princess's preceptor. He was formally appointed in 1827, when he took up his residence at Kensington Palace. To reconcile Fritulein Lehzen to the new situation, George IV in 1827, at the request of his sister, Princess Sophia, made her a Hanoverian baroness. Davys did his work discreetly. He gathered round him a band of efficient masters in special subjects of

study, mainly reserving for himself religious knowledge and history. Although his personal religious views were decidedly evangelical, he was liberal in his attitude to all religious opinions, and he encouraged in his pupil a singularly tolerant temper, which in after life served her in good stead. Thomas Steward, the writing-master of Westminster school, taught her penmanship and arithmetic. She rapidly acquired great ease and speed in writing, although at the sacrifice of elegance. As a girl she was a voluble correspondent with her numerous kinsfolk, and she maintained the practice till the end of her life. Although during her girlhood the duchess conscientiously caused her daughter to converse almost entirely in English, German was the earliest language she learned, and she always knew it as a mother-tongue. She studied it and German literature grammatically under M. Barez. At first she spoke English with a slight German accent; but this was soon mended, and in mature years her pronunciation of English was thoroughly natural, although refined. As a young woman she liked to be regarded as an authority on English accent (*LADY LITTON, Letters*). She was instructed in French by M. Grandineau, and came to speak it well and with fluency. At a later period, when she was fascinated by Italian opera, she studied Italian assiduously, and rarely lost an opportunity of speaking it. Although she was naturally a good linguist, she showed no marked aptitude or liking for literary subjects of study. She was not permitted in youth to read novels. First-rate literature never appealed to her. Nor was she endowed with genuine artistic taste. But to the practical pursuit of the arts she applied herself as a girl with persistency and delight. Music occupied much time. John Bernard Salo, organist of St. Margaret's, Westminster, and subsequently organist of the Chapel Royal, gave her her first lessons in singing in 1826. She developed a sweet soprano voice, and soon both sang and played the piano with good effect. Drawing was first taught her by Richard Westall the academician, who in 1829 painted one of the earliest portraits of her, and afterwards by (Sir) Edwin Landseer. Sketching in pencil or water-colours was a lifelong amusement, and after her marriage she attempted etching. In music and the pictorial arts she sought instruction till comparatively late in life. To dancing, which she was first taught by Mlle. Bourdin, she was, like her mother, devoted; and like her, until middle age, danced with exceptional grace and energy.

Her youthful devotion to music and art

She was also from childhood a skilful horse-woman, and thoroughly enjoyed physical exercise, taking part in all manner of indoor and outdoor games.

The princess grew up an amiable, merry, affectionate, simple-hearted child—very considerate for others' comfort, scrupulously regardful of truth, and easily pleased by homely amusement. At the same time she was self-willed and often showed impatience of restraint. Her memory was from the first singularly retentive. Great simplicity was encouraged in her general mode of life. She dressed without ostentation. Lord Albemarle watched her watering, at Kensington, a little garden of her own, wearing 'a large straw hat and a suit of white cotton,' her only ornament being 'a coloured fichu round the neck.' Charles Knight watched her breakfasting in the open air when she was nine years old, enjoying all the freedom of her years, and suddenly darting from the breakfast table 'to gather a flower in an adjoining pasture.' Leigh Hunt often met her walking at her ease in Kensington Gardens, and although he was impressed by the gorgeous raiment of the footman who followed her, noticed the unaffected playfulness with which she treated a companion of her own age. The Duchesses of Kent was fond of presenting her at Kensington to her visitors, who included men of distinction in all ranks of life. William Wilberforce describes how he received an invitation to visit the duchess at Kensington Palace in July 1820, and how the duchess received him 'with her fine animated child on the floor by her side with its playthings, of which I soon became one.' On 19 May 1828 Sir Walter Scott 'dined with the duchess' and was 'presented to the little Princess Victoria—I hope they will

change her name (he added)—the heir apparent to the crown as things now stand. . . . This little lady is educated with much care, and watched so closely, that no busy maid has a moment to whisper, "You are heir of England." But Sir Walter suggested 'I suspect, if we could dissect the little heart, we should find that some pigeon or other bird of the air had carried the matter.'

According to a story recorded many years afterwards by Baroness Lehzen, the fact of her rank was carefully concealed from her until her twelfth year, when after much consultation it was solemnly revealed to her by the baroness, who cunningly inserted in the child's book of English history a royal genealogical tree in which her place was prominently indicated. The princess, the

Sir Walter Scott's visit.

baroness stated, received the information, of which she knew nothing before, with an ecstatic assurance that she would be 'good' thenceforth. But there were many opportunities open to her previously of learning the truth about her position, and on the story in the precise form that it took in the Baroness Lehzen's reminiscence the queen herself threw doubt. Among the princess's childish companions were the daughters of Heinrich von Bülow, the Prussian ambassador in London, whose wife was daughter of Humboldt. When, on 28 May 1829, they and some other children spent an afternoon at Kensington at play with the princess, each of them on leaving was presented by her with her portrait—an act which does not harmonise well with the ignorance of her rank with which Baroness Lehzen was anxious to credit her (*Gabriele von Bülow*, a memoir, English transl. 1897, p. 103).

The most impressive of the princess's excursions were summer and autumn excursions into the country or to the seaside.

Visits to her uncle Leopold's house at Claremont, near Esher, were repeated many times a year. There, she said, the happiest days of her youth were spent (Guxey, p. 392). In the autumn of 1824 she was introduced at Claremont to Leopold's mother, who was her own godmother and grandmother, the Duchess Dowager of Saxe-Coburg, who stayed at Claremont for more than two months. The old duchess was enthusiastic in praise of her granddaughter—'the sweet blossom of May' she called her—and she favoured the notion, which her son Leopold seems first to have suggested to her, that the girl might do worse than marry into the Saxe-Coburg family. Albert, the younger of the two sons of her eldest son, the reigning Duke of Saxe-Coburg—a boy of her own age—was seriously considered as a suitor. Thenceforth the princess's uncle Leopold was as solicitous about the well-being of his nephew Albert as about that of his niece Victoria. A little later in the same year (1824) the child and her mother paid the first of many visits to Ramsgate, staying at Albion House. Broadstairs was also in early days a favourite resort with the duchess and her daughter, and on returning thence on one occasion they paid a first visit to a nobleman, the Earl of Winchelsea, at East-wall Park, Ashford.

In 1826 the princess and her mother were invited for the first time to visit the king, George IV, at Windsor. He was then residing at the royal lodge in the park while the castle was undergoing restoration, and

his guests were allotted quarters at Cumberland Lodge. The king was gracious to his niece, and gave her the badge worn by members of the royal family. Her good spirits and frankness made her thoroughly agreeable to him. On one occasion she especially pleased him by bidding a band play 'God save the King' after he had invited her to choose the tune. On 17 Aug. 1826 she went with him on Virginia Water, and afterwards he drove her out in his phaeton.

Next year there died without issue her uncle the Duke of York, of whom she knew little, although just before his death, while he was living in the King's Road, Chelsea, he had invited her to pay him a visit, and had provided a punch-and-judy show for her amusement. His death left only her uncle the Duke of Clarence between herself and the throne, and her ultimate succession was now recognised. On 28 May 1829 she attended, at St. James's Palace, a court function for the first time. The queen of Portugal, Maria II (da Gloria), who was only a month older than the princess, although she had already occupied her throne three years, was on a visit to England, and a ball was given in her honour by George IV. Queen Maria afterwards (9 April 1830) married Princess Victoria's first cousin, Prince Ferdinand Augustus of Saxe-Coburg, and Queen Victoria always took an extremely sympathetic interest in her career, her descendants, and her country.

In June 1830 the last stage but one in the princess's progress towards the crown was reached. Her uncle George IV died on 26 June, and was succeeded by his brother William, duke of Clarence. The girl thus became heir-presumptive. Public interest was much excited in her, and in November 1830 her status was brought to the notice of parliament. A bill was introduced by the lord chancellor, Lord Lyndhurst, and was duly passed, which conferred the regency on the Duchess of Kent, in case the new king died before the princess came of age. This mark of confidence was a source of great satisfaction to the duchess. Next year William IV invited parliament to make further 'provision for Princess Alexandra Victoria of Kent, in view of recent events.' The government recommended that 10,000*l.* should be added to the Duchess of Kent's allowance on behalf of the princess. Two influential members, Sir Matthew White Ridley and Sir Robert Inglis, while supporting the proposal, urged that the princess

should as queen assume the style of Elizabeth II, and repeated the old complaint that the name Victoria did not accord with the feelings of the people. The princess had, however, already taken a violent antipathy to Queen Elizabeth, and always deprecated any association with her. An amendment to reduce the new allowance by one half was lost, and the government's recommendation was adopted (*Hansard*, 3rd ser. v. 591, 654 seq.) Greater dignity was thus secured for the household of the Duchess of Kent and her daughter, although the duchess regarded the addition to her income as inadequate to the needs of her position. The Duchess of Northumberland (a granddaughter of Olive) was formally appointed governess of the princess, and her preceptor Davys was made dean of Ulster. She was requested to attend court functions. On 20 July 1830, dressed in deep mourning with a long court train and veil reaching to the ground (*Bülow*, p. 191), she followed Queen Adelaide at a chapter of the order of the Garter held at St. James's Palace. A few months later she was present at the prorogation of parliament. On 24 Feb. 1831 she attended her first drawing-room, in honour of Queen Adelaide's birthday. The king complained that she looked at him stonily, and was afterwards deeply offended by the irregularity of her attendances at court. She and her mother were expected to attend his coronation on 8 Sept. 1831, but they did not come, and comment on their absence was made in parliament.

With the apparent access of prosperity went griefs and annoyances which caused passing tears, and permanently impressed the princess's mind with a sense of the 'sadness' of her youth. In 1828 her constant companion, the Princess Féodore of Leiningen, left England for good, on her marriage, 18 Feb., to Prince von Hohenlohe-Langenburg, and the separation deeply pained Victoria. In 1830 alarm was felt at Kensington at the prospect of Prince Leopold's permanent removal to the continent. Both mother and daughter trusted his guidance implicitly. The princess was almost as deeply attached to him as to her mother. Although he declined the offer of the throne of Greece in 1830, his acceptance next year of the throne of Belgium grieved her acutely. As king of the Belgians, he watched her interests with no less devotion than before, and he was assiduous in correspondence; but his absence from the country and his subsequent marriage with Louis Philippe's daughter withdrew him from that constant control of her affairs to

which she and her mother had grown accustomed. Two deaths which followed in the Saxe-Coburg family increased the sense of depression. The earlier loss did not justify deep regrets. The Duchess of Kent's sister-in-law, the mother of Prince Albert, who soon after his birth had been divorced, died in August 1831. But the death on 16 Nov. of the Duchess Dowager of Saxe-Coburg, the Duchess of Kent's mother and the princess's grandmother and grandmother, who took the warmest interest in the child's future, was a lasting sorrow.

The main cause of the Duchess of Kent's anxieties at the time was, however, the hostile attitude that William IV assumed towards her. She had no reason to complain of the unconventional and her mother's extended to her daughter, nor would it be easy to exaggerate the maternal solicitude which the homely Duchess of Clarence, now become Queen Adelaide, showed the princess. But the king resented the payment to the duchess of any of the public consideration which the princess's station warranted. The king seems to have been moved by a senile jealousy of the duchess's influence with the heiress presumptive to the crown, and he repeatedly threatened to remove the girl from her mother's care. When the two ladies received, in August 1831, a royal salute from the ships at Portsmouth on proceeding for their autumn holiday to a hired residence, Norris Castle, Isle of Wight, William IV requested the duchess to forego such honours, and, when she refused, prohibited them from being offered. Incessant wrangling between him and the duchess continued throughout the reign.

From a maternal point of view the duchess's conduct was unexceptionable. She was indefatigable in making her daughter acquainted with places of interest in England. On 23 Oct. 1830 the princess opened at Bath the Royal Victoria Park, and afterwards inaugurated the Victoria Drive at Malvern. From 1832 onwards the duchess frequently accompanied her on extended tours, during which they were the guests of the nobility, or visited public works and manufacturing centres, so that the princess might acquire practical knowledge of the industrial and social conditions of the people. William IV made impotent protests against these 'royal progresses,' as he derisively called them. The royal heiress was everywhere well received, took part for the first time in public functions, and left in all directions a favourable impression. Municipal corporations invaria-

bly offered her addresses of welcome; and the Duchess of Kent, in varying phraseology, replied that it was 'the object of her life to render her daughter deserving of the affectionate solicitude she so universally inspires, and to make her worthy of the attachment and respect of a free and loyal people.'

The first tour, which took place in the autumn of 1832, introduced the princess to the principality of Wales. Leaving Kensington in August, the party drove rapidly through Birmingham, Wolverhampton, and Shrewsbury to Powis Castle, an early home of her governess, the Duchess of Northumberland; thence the princess went over the Menai Bridge to a house at Beaumaris, which she rented for a month.

The tour of 1832. She presented prizes at the Eisteddfod there; but an outbreak of cholera shortened her stay, and she removed to Plas Newydd, which was lent them by the Marquis of Anglesea. She laid the first stone of a boys' school in the neighbourhood on 13 Oct., and made so good an impression that 'the Princess Victoria' was the topic set for a poetic competition in 1834 at the Cardiff Bardic Festival. The candidates were two hundred, and the prize was won by Mrs. Cornwell Baron Wilson. Passing on to Eaton Hall, the seat of Lord Grosvenor, she visited Chester on 17 Oct., and opened a new bridge over the Dee, which was called Victoria Bridge. From 17 to 24 Oct. she stayed with the Duke of Devonshire at Chatsworth, and made many excursions in the neighbourhood, including a visit to Strutt's cotton mills at Belper. Subsequently they stayed at a long series of noblemen's houses—Shugborough, the house of Lord Lichfield; Pitchford, the seat of the third earl of Liverpool, half-brother of the Tory statesman, and himself a politician of ability and insight, for whom the queen cherished affection; Hewell Grange, the seat of Lord Plymouth; and Wytham Abbey, the seat of the Earl of Abingdon. From Wytham she and her mother twice went over to Oxford (8-9

Nov.), where they received addresses from both town and university; Dean Gaisford conducted them over Christ Church; they spent some time at the Bodleian Library and at the buildings of the university press. Robert Lowe (afterwards Viscount Sherbrooke), then an undergraduate, described the incidents of the visit in a brilliant macaronic poem (printed in PATRICK MARTIN'S *Life of Lord Sherbrooke*, i. 86-90). Leaving Oxford the royal party journeyed by way of High Wycombe and

Uxbridge to Kensington. Throughout this tour the princess dined with her mother and her hosts at seven o'clock each evening.

Every year now saw some increase of social occupation. Visitors of all kinds grew numerous at Kensington. In November 1832 Captain Back came to explain his projected polar expedition. In January 1833 the portrait painters David Wilkie and George Hayter arrived to paint the princess's portrait. On 24 April the Duchess of Kent, with a view to mollifying the king, elaborately entertained him at a large dinner party; the princess was present only before and after dinner. In June two of her first cousins, Princes Alexander and Ernest of Wurtemberg, and her half-brother, the prince of Leiningen, were her mother's guests. On 24 May 1833 the princess's fourteenth birthday was celebrated by a juvenile ball given by the king at St. James's Palace.

A summer and autumn tour was arranged for the south coast in July 1833. The royal party went a second time to

The tour of 1833. Norris Castle, Isle of Wight, and made personal acquaintance with those parts of the island with which an important part of the princess's after-life was identified. She visited the director of her mother's household, Sir John Conroy, at his residence, Osborne Lodge, on the site of which at a later date Queen Victoria built Osborne Cottage, and near which she erected Osborne House. She explored Whippingham Church and East Cowes; but the main object of her present sojourn in the island was to inspect national objects of interest on the Hampshire coast. At Portsmouth she visited the Victory, Nelson's flagship. Crossing to Weymouth on 29 July she spent some time at Melbury, Lord Ilchester's seat. On 2 Aug. she and her mother arrived at Plymouth to inspect the dockyards. Next day the princess presented on Plymouth Hoe new colours to the 89th regiment (royal Irish Fusiliers), which was then stationed at Devonport. Lord Hill, the commander-in-chief, who happened to be at the barracks, took part in the ceremony. The Duchess of Kent on behalf of her daughter addressed the troops, declaring that her daughter's study of English history had inspired her with martial ardour. With the fortunes of the regiment the princess always identified herself thenceforth. It was at a later date named the Princess Victoria's Royal Irish Fusiliers, and twice again, in 1866 and 1889, she presented it with new colours (cf. ROWLAND BRINKMAN'S *List. Records of the Eighty-ninth (Princess Victoria's) Regiment*, 1888, pp. 83-4). The

princess afterwards made a cruise in the yacht *Emerald* to Eddystone lighthouse, to Torquay, whence she visited Exeter, and to Swanage.

While she was responding to the calls of public duty she was enjoying enlarged opportunities of recreation. She frequently visited the theatre, in which she always delighted.

But it was the Italian opera that roused her highest enthusiasm. She never forgot the deep impressions that Pasta, Malibran, and Griesi, Tamburini and Rubini made on her girlhood. Griesi was her ideal vocalist, by whom she judged all others. All forms of music, competently rendered, fascinated her. Her reverence for the violinist Paganini, after she had once heard him, never waned. In June 1834 she was a deeply interested auditor at the royal musical festival that was given at Westminster Abbey. During her autumn holiday in the same year, when she first stayed at Tunbridge Wells, and afterwards at St. Leonards-on-Sea, she spent much of her time in playing and singing, and her instrument was then the harp (cf. *Memoirs of Georgiana Lady Chatterton*, by E. H. Dering, 1901, p. 29). In 1836 Lablache became her singing master, and he gave her lessons for nearly twenty years, long after her accession to the throne.

During 1835, when she completed her sixteenth year, new experiences crowded on her. In June she went for the first time to Ascot, and joined in the royal procession. The American observer, N. P. Willis, watched her listening with unaffected delight to an itinerant ballad singer, and thought her 'quite unnecessarily pretty and interesting,' but he regretfully anticipated that it would be the fate of 'the heir to such a crown of England' to be sold in marriage for political purposes without regard to her personal character or wishes (*Willis, Pen-cillings by the Way*, 1885, iii. 115). On 30 July 1835 the princess was confirmed

at Chapel Royal, St. James's. The archbishop of Canterbury's address on her future responsibilities affected her. She 'was drowned in tears and frightened to death.' Next Sunday, at the chapel of Kensington Palace, the princess received the holy sacrament for the first time. The grim archbishop (Howley) again officiated, together with her preceptor, Davys, the dean of Chester. After a second visit to Tunbridge Wells, where she stayed at Avoyne House, she made a triumphal northern progress. At York she remained a week with Archbishop Harcourt at Bishops-

thorp, and visited Lord Fitzwilliam at Wentworth House, whence she went over to the

The tour of 1835. races at Doncaster. She was the guest of the Duke of Rutland at

Belvoir House, was enthusiastically received by the people of Stamford, and was next entertained by the Marquis of Exeter at Burghley. A great ball at Burghley was opened by a dance in which the marquis was the princess's partner. When she reached Lynn on her way to Holkham, the Earl of Leicester's seat, navvies yoked themselves to her carriage and drew it round the town. Her last sojourn on this tour was at Euston Hall, the residence of the Duke of Grafton. After returning to Kensington, she spent the month of September at Ramsgate, making excursions to Walmer Castle and to Dover.

In 1836, when the princess was seventeen, her uncle Leopold deemed that the time had arrived to apply a practical test to his scheme of uniting her in marriage with her first cousin, Prince Albert of Saxe-Coburg. Accordingly, he arranged with his sister, the Duchess of Kent, that Albert and his elder brother Ernest, the heir-apparent to the duchy, should in the spring pay a visit of some weeks' duration to aunt and daughter

at Kensington Palace. In May First meeting with Princess Victoria met Prince Albert for the first time. William IV and Queen Adelaide

received him and his brother courteously, and they were frequently entertained at court. They saw the chief sights of London, and lunched with the lord mayor at the Mansion House. But the king looked with no favour on Prince Albert as a suitor for his niece's hand. At any rate, he was resolved to provide her with a wider field of choice, and he therefore invited the prince of Orange and his two sons and Duke William of Brunswick to be his guests at the same period that the Saxe-Coburg princes were in England, and he gave the princess every opportunity of meeting all the young men together. His own choice finally fell on Alexander, the younger son of the prince of Orange. On 30 May the Duchess of Kent gave a brilliant ball at Kensington Palace, and found herself under the necessity of inviting Duke William of Brunswick and the prince of Orange with his two sons as well as her own protégés. Among the general guests was the Duke of Wellington. Some days later the Saxe-Coburg princes left England. Albert had constantly sketched and played the piano with his cousin; but her ordinary language, like that of those about her, was English,

which placed him at a disadvantage, for he had but recently begun to learn it. The result of their visit was hardly decisive. Prince Albert wrote of his cousin as 'very amiable,' and astonishingly self-possessed, but parted with her heart-whole. The princess, however, had learned the suggested plan from her uncle Leopold, whose wishes were law for her, and on 7 June, after Albert had left England, she wrote ingenuously to Leopold that she commended the youth to her uncle's special protection, adding, 'I hope and trust that all will go on prosperously and well on this subject, now of so much importance to me.' Her views were uncoloured by sentiment. It was natural and congenial to obey her uncle.

In the early autumn of 1836 she paid a second visit to the retired tory statesman, Lord Liverpool, who was then living at Buxted Park, near Uckfield, and afterwards spent a quiet month at Ramsgate. The old king was at the moment causing the Duchess of Kent renewed disquietude. The princess had consequently absented herself from court, and the king complained that he saw too little of her. On 20 Aug. 1836, the king's birthday, mother and daughter dined with him at a state banquet, when he publicly expressed the hope that he might live till his niece came of age, so that the kingdom might be spared the regency which parliament had designed for the Duchess of Kent. He described his sister-in-law as a 'person' 'surrounded by evil counsellors,' and unfitted 'to the exercise of the duties of her station.' He asserted that, contrary to his command, she was occupying an excessive number of rooms—seventeen—at Kensington Palace. He would not 'endure conduct so disrespectful to him.' The princess burst into tears. The breach between the king and her mother was complete.

William IV's hope of living long enough to prevent a regency was fulfilled. Although his health was feeble, no serious crisis was feared when, on 24 May 1837, the princess celebrated her eighteenth birthday, and thus came of age. At Kensington the occasion was worthily celebrated, and the household kept holiday. The princess was awakened by an *aubejourn*, and received many costly gifts. Addresses from public bodies were presented to her mother. To one from the corporation of London the duchess made, on behalf of her daughter, an elaborate reply. She pointed out that the princess was in intercourse with all classes of society, and, after an indiscreet reference to the elite put on herself by the royal family, spoke volubly of

the diffusion of religious knowledge, the preservation of the constitutional prerogatives of the crown, and the protection of popular liberties as the proper aims of a sovereign. The king was loth to withdraw himself from the public rejoicing. He sent his niece a grand piano, and in the evening gave a state ball in her honour at St. James's Palace. Neither he nor the queen attended it, owing, it was stated, to illness. The princess opened the entertainment in a quadrille with Lord FitzAlan, grandson of the Duke of Norfolk, and afterwards danced with Nicholas Esterházy, son of the Austrian ambassador. In the same month she paid two visits to the Royal Academy, which then for the first time held its exhibition in what is now the National Gallery, Trafalgar Square. She was the centre of attraction. On the first visit she shook hands and talked with Rogers the poet, and, hearing that the actor, Charles Kemble, was in the room, desired that he should be introduced to her. A few days later the king, in a letter addressed personally to her, offered to place 10,000*l.* a year at her own disposal, independently of her mother. She accepted the offer to her mother's chagrin.

II

No sooner had the celebrations of the princess's majority ended than death put her in possession of the fullest rights that it could confer. Early in June it was announced that the king's health was breaking. On Tuesday, 20 June 1837, at twelve minutes past two in the morning, he died at Windsor Castle. The last barrier between Princess Victoria and the crown was thus removed.

The archbishop of Canterbury, who had performed the last religious rites, at once took leave of Queen Adelaide, and with Lord Conyngham, the lord chamberlain, drove through the early morning to Kensington to break the news to the new sovereign. They arrived there before 5 A.M. and found difficulty in obtaining admission. The porter refused to rouse the princess. At length the Baroness Lehzen was sent for, and she reluctantly agreed to warn the princess of their presence. The girl came into the room with a shawl thrown over her dressing-gown, her feet in slippers, and her hair falling down her back. Lord Conyngham dropped on his knee, saluted her as queen, and kissed the hand she held towards him. The archbishop did the like, addressing to her 'a sort of pastoral charge.' At the same

time she was informed of the king's peaceful end. The princess clasped her hands and anxiously asked for news of her aunt (BUNNEN, i. 272).

The prime minister, Lord Melbourne, arrived before nine o'clock, and was at once received in audience. The queen's uncle, the Duke of Sussex, and the Duke of Wellington, the most popular man in the state, also visited her. But, in accordance with the constitution, it was from the prime minister, Lord Melbourne, alone that she could receive counsel as to her official duties and conduct. The privy council was hastily summoned to meet at Kensington at 11 A.M. on the day of the king's death. On entering the room the queen was met by her uncles, the Dukes of Cumberland and Sussex, and having taken her seat at once read the speech which Lord Melbourne had written for her some days before in consultation with Lord Lansdowne, the veteran president of the council. She was dressed very plainly in black and wore no ornaments. She was already in mourning for the death of Queen Adelaide's mother. She spoke of herself as 'educated in England under the tender and enlightened care of a most affectionate mother; she had learned from her infancy to respect and love the constitution of her native country.' She

The first council.

would aim at securing the enjoyment of religious liberty and would protect the rights of all her subjects. She then took the oath, guaranteeing the security of the church of Scotland; the ministers gave up their seals to her and she returned them; they then kissed hands on reappointment, and the privy councillors took the oaths. Although she was unusually short in stature (below five feet), and with no pretensions to beauty, her manner and movement were singularly unembarrassed, modest, graceful, and dignified, while her distinct and perfectly modulated elocution thrilled her auditors. 'She not merely filled her chair,' said the Duke of Wellington, 'she filled the room.' Throughout the ceremony she conducted herself as though she had long been familiar with her part in it (cf. POOLE, *Life of Stratford Canning*, 1888, ii. 45; CROKER PAPERS, ii. 359; ASHLIN, *Life of Palmerston*, i. 340).

The admirable impression she created on this her first public appearance as queen was fully confirmed in the weeks that followed. Next day she drove to St. James's Palace to attend the formal proclamation of her accession to the throne. While the heralds recited their announcement she stood in full view of the public between

Lord Melbourne and Lord Lansdowne, at the open window of the privy council chamber, looking on the quadrangle nearest Marlborough House. The crowd

The proclamation.

cheered vociferously, and prominent in the throng was Daniel O'Connell, who waved his hat with conspicuous energy. 'At the sound of the first shouts the colour faded from the queen's cheeks,' wrote Lord Albemarle, her first master of the horse, who was also an onlooker, 'and her eyes filled with tears. The emotion thus called forth imparted an additional charm to the winning courtesy with which the girl-sovereign accepted the proffered homage' (ALBEMARLE, *Fifty Years of my Life*, p. 378).

After the proclamation the queen saw Lord Hill, the commander-in-chief, the lord-chancellor, and other great officers of state. At noon her second council was held at St. James's Palace, and all the cabinet ministers were present. Later in the day the proclamation was repeated at Trafalgar Square, Temple Bar, Wood Street, and the Royal Exchange.

Although the queen signed the privy council register at her first council in the name of Victoria only, in all the official documents which were prepared on the first day of her reign her name figured with the prefix of Alexandrina. In the proclamation she was called 'Her Royal Majesty Alexandrina Victoria, Queen of the United Kingdom.' But, despite the sentiment that had been excited against the name Victoria, it was contrary to her wish to be known by any other. Papers omitting the prefix 'Alexandrina' were hastily substituted for those in which that prefix had been introduced, and from the second day of the new reign the sovereign was known solely as Queen Victoria. Thenceforth that name was accepted without cavil as of the worthiest English significance. It has since spread far among her subjects. It was conferred on one of the most prosperous colonies of the British empire in 1851, and since on many smaller settlements or cities, while few municipalities in the United Kingdom or the empire have failed to employ it in the nomenclature of streets, parks, railway-stations, or places of public assembly.

Abroad, and even in some well-informed quarters at home, surprise was manifested at the tranquillity with which the nation saw the change of monarch effected. But the general enthusiasm that Queen Victoria's accession evoked was partly due to the contrast she presented with those who had lately oc-

Public sentiment regarding her.

cupied the throne. Since the century began there had been three kings of England—men all advanced in years—of whom the first was an imbecile, the second a profligate, and the third little better than a buffoon. The principle of monarchy was an article of faith with the British people which the personal unsuitness of the monarch seemed unable to touch. But the substitution for kings whose characters could not inspire respect of an innocent girl, with what promised to be a long and virtuous life before her, evoked at the outset in the large mass of the people a new sentiment—a sentiment of chivalric devotion to the monarchy which gave it new stability and rendered revolution impossible. Although the play of party politics failed to render the sentiment universal, and some actions of the queen in the early and late years of the reign severely tried it, it was a plant that, once taking root, did not readily decay. Politicians—of the high rank of Lord Palmerston, the foreign secretary in the whig ministry, and Sir Robert Peel, leader of the tories in the House of Commons—deplored the young queen's inexperience and ignorance of the world; but such defects were more specious than real in a constitutional monarch, and, as far as they were disadvantageous, were capable of remedy by time. Sydney Smith echoed the national feeling when, preaching in St. Paul's Cathedral on the first Sunday of her reign, he described the new sovereign as 'a patriot queen,' who might be expected to live to a ripe old age and to contribute to the happiness and prosperity of her people. 'We have had glorious female reigns,' said Lord John Russell, the home secretary under Melbourne, a few weeks later. 'Those of Elizabeth and Anne led us to great victories. Let us now hope that we are going to have a female reign illustrious in its deeds of peace—an Elizabeth without her tyranny, an Anne without her weakness' (WALFORD, *Life of Lord John Russell*, i. 281).

Owing to her sex, some changes in the position and duties of a British sovereign were inevitable. The Salic law rendered her incompetent to succeed to the throne of Hanover, which British sovereigns had filled since George the elector of Hanover became George I of England in 1714. Hanover had been elevated from an electorate to a kingdom by the congress of Vienna in 1814, and the kingdom now passed to the queen's uncle, the next heir after her to the English throne, Ernest, duke of Cumberland. The dissolution of the union between England and Hanover was acquiesced in readily

by both countries. They had long drifted apart in political sentiments and aspirations. The new king of Hanover was altogether out of sympathy with his royal niece. He proved an illiberal and reactionary ruler; but she, in whom domestic feeling was always strong, took a lively interest in the fortunes of his family, and showed especial kindness to them in the trials that awaited them. At home the main alteration in her duty as sovereign related to the criminal law. Death was the punishment accorded to every manner of felony until William IV's parliament humanely reduced the number of capital offences to four or five, and it had been the custom of the sovereign personally to revise the numerous capital sentences pronounced in London at the Old Bailey. At the close of each session these were reported to the sovereign by the recorder for final judgment. A girl was obviously unfitted to perform this repugnant task. Accordingly the queen was promptly relieved of it and the criminal law, by act of parliament (7 William IV and 1 Vict. cap. 77). Outside London the order of the court to the sheriff had long been sufficient to insure the execution of the death penalty. To that practice London now conformed, while the home secretary dealt henceforth by his sole authority with petitions affecting offenders capitally convicted, and was alone responsible for the grant of pardons, reprieves, or respites. Whenever capital sentences were modified by the home secretary, he made a report to that effect to the queen, and occasionally it evoked comment from her; but his decision was always acted on as soon as it was formed. Thus, although the statute of 1837 formally reserved 'the royal prerogative of mercy,' the accession of a woman to the throne had the paradoxical effect of practically annulling all that survived of it.

But, while the queen was not called on to do everything that her predecessors had done, she studied with ardour the routine duties of her station and was immersed from the moment of her accession in pressing business. The prime minister, Melbourne, approached his task of giving her political instruction with exceptional tact and consideration, and she proved on the whole an apt pupil. Melbourne was the leader of the whig party, whose constitutional principles denied the sovereign any independence; but it was with the whigs that her father had associated himself, and association with them was personally congenial to her. None the less, she was of an imperious, self-reliant, and somewhat wilful disposition; she was naturally

Lord Melbourne's instruction.

The queen and Hanover.

proud of her elevation and of the dignified responsibilities which nominally adhered to the crown. While, therefore, accepting without demur Melbourne's theories of the dependent place of a sovereign in a constitutional monarchy, she soon set her own interpretation on their practical working. She was wise enough at the outset to recognise her inexperience, and she knew instinctively the need of trusting those who were older and better versed in affairs than herself. But she never admitted her subjection to her ministers. From almost the first to the last day of her reign she did not hesitate closely to interrogate them, to ask for time for consideration before accepting their decisions, and to express her own wishes and views frankly and ingenuously in all affairs of government that came before her. After giving voice to her opinion, she left the final choice of action or policy to her official advisers' discretion; but if she disapproved of their choice, or it failed of its effect, she exercised unflinchingly the right of private rebuke.

The first duty of her ministers and herself was to create a royal household. The principles to be followed differed from those which had recently prevailed. It was necessary for a female sovereign to have women and not men as her personal attendants. She deprecated an establishment on the enormous scale that was adopted by the last female sovereign in England—Queen Anne. A mistress of the robes, eight ladies-in-waiting, and six women of the bedchamber she regarded as adequate. Her uncle Leopold wisely urged her to ignore political considerations in choosing her attendants. But she was without personal friends of the rank needed for the household office, and she accepted Lord Melbourne's injudicious advice to choose their first holders exclusively from the wives and daughters of the whig ministers. She asked the Marchioness of Lansdowne to become mistress of the robes, and although her health did not permit her to accept that post, she agreed to act as first lady-in-waiting. The higher household dignity was filled (1 July 1837) by the Duchess of Sutherland, who was soon one of the queen's intimate associates. Others of her first ladies-in-waiting were the Countess of Mulgrave, afterwards Marchioness of Normanby, and Lady Tavistock. The Countess of Rosebery declined to join them. In accord with better established precedent, the gentlemen of her household were also chosen from orthodox supporters of the whig ministry. The queen only asserted herself by requesting that Sir John Conroy, the master

of her mother's and her own household, whom she never liked, should retire from her service; she gave him a pension of 8,000*l.* a year, but refused his request for an order and an Irish peerage. Graver perplexities attached to the question of the appointment of a private secretary to the new sovereign. Although former occupants of the throne had found such an officer absolutely essential to the due performance of their duties, the ministers feared the influence that one occupying so confidential a relation with a young untried girl might gain over her. With

The private secretaryship.

admirable self-denial Melbourne solved the difficulty by taking on himself the work of her private secretary for all public business. As both her prime minister and private secretary it was thus necessary for him to be always with the court. For the first two years of her reign he was her constant companion, spending most of the morning at work with her, riding with her of an afternoon, and dining with her of an evening. The paternal care which he bestowed on her was acknowledged with gratitude by political friends and foes.

Melbourne's acceptance of the office of private secretary best guaranteed the queen's course against pitfalls which might have involved disaster. Members of the family circle in which she had grown up claimed the right and duty of taking part in her guidance when she began the labour of her life, and, owing to their foreign birth, it was in her own interest that their influences should be permanently counterbalanced by native counsel. King Leopold, the queen's foster-father, who had hitherto controlled her career, and remained a trusted adviser till his death, had, as soon as she reached her majority, sent his confidential friend and former secretary, Baron Stockmar, to direct her political education. The baron remained in continuous attendance on her, without official recognition, for the first fifteen months of her reign, and when the question of a choice of private secretary was first raised, the queen expressed an infelicitous anxiety to appoint him. A native of Coburg, who originally came to England with Leopold in 1816 as his medical attendant, Stockmar was now fifty years old. Sincerely devoted to his master and to the Saxe-Coburg family, he sought no personal advantage from his association with them. Even Lord Palmerston, who bore him no affection, admitted that he was the most disinterested man he ever met. Intelligently read in English history, he studied with zeal the theory of the British

The formation of her household.

Foreign advisers.

constitution. There was genuine virtue in the substance of his reiterated advice that the queen should endeavour to maintain a position above party and above intrigue. But, although sagacious, Stockmar was a pedantic and a sententious critic of English politics, and cherished some perilous heresies. The internal working of the British government was never quite understood by him. His opinion that the sovereign was no 'nodding mandarin' was arguable, but his contention that a monarch, if of competent ability, might act as his own minister was wholly fallacious. The constant intercourse which he sought with Melbourne and other ministers was consequently felt by them to be embarrassing, and to be disadvantageous to the queen. An impression got abroad that he exerted on her a mysterious anti-national influence behind the throne. Abercromby, speaker of the House of Commons, threatened in very early days to bring the subject to the notice of parliament. But when it was rumoured that Stockmar was acting as the queen's private secretary, Melbourne circulated a peremptory denial, and public attention was for the time diverted. The queen's openly displayed fidelity to her old governess, the Baroness Lehzen, did not tend to dissipate the suspicion that she was in the hands of foreign advisers. But the baroness's relations with her mistress were above reproach and did credit to both. She had acted as her old pupil's secretary in private matters before she came to the throne, and she continued to perform the same functions after the queen's accession. But public affairs were never brought by the queen to her cognisance, and the baroness loyally accepted the situation. With the Duchess of Kent, who continued to reside with her daughter, although she was now given a separate suite of apartments, the queen's relation was no less discreet—far more discreet than the duchess approved. She was excluded from all share in public business—an exclusion in which she did not readily acquiesce. For a long time she treated her daughter's emancipation from her direction as a personal grievance (GRMVILLD). There was never any ground for the insinuation which Lord Brougham conveyed when he spoke in the House of Lords of the Duchess of Kent as 'the queen-mother.' Melbourne protested with just indignation against applying such a misnomer to 'the mother of the queen,' who was wholly outside the political sphere.

Public ceremonials meanwhile claimed much of the queen's attention. On 27 June she held her first levee at Kensington to

receive the credentials of the ambassadors and envoys. She was dressed in black, but,

as sovereign of the order of the Public ceremonial. Garter, wore all its brilliant insignia—ribbon, star, and a band bearing the motto, in place of the garter, buckled on the left arm (BUNSDN, ii. 273). There followed a long series of deputations from public bodies, bearing addresses of condolence and congratulation, to all of which she replied with characteristic composure. On 17 July she went in state to dissolve parliament in accordance with the law which required a general election to take place immediately on the demise of the crown. For the first time she appeared in apparel of state—a mantle of crimson velvet lined with ermine, an ermine cape, a dress of white satin embroidered with gold, a tiara and stomacher of diamonds, and the insignia of the garter. She read the speech with splendid effect. Fanny Kemble, who was present, wrote: 'The queen's voice was exquisite. . . . The announcement was as perfect as the intonation was melodious, and I think it is impossible to hear a more excellent utterance than that of the queen's English by the English queen.' A more disinterested visitor, the American orator, Charles Sumner, used very similar language: 'Her voice was sweet and finely modulated. . . . I think I have never heard anything better read in my life than her speech.' On 19 July the queen held her first levee at St. James's Palace, and next day her first drawing-room. On both occasions the attendance was enormous.

A few days before (13 July) the queen left the home of her girlhood at Kensington for Buckingham Palace, Removal to Buckingham the new official residence in London. The building had been begun by the architect John Nash for George IV, but was not completed until William IV became king. He, however, disliked it, and preferred to remain at St. James's Palace. No monarch occupied Buckingham Palace before Queen Victoria, for whom it was for the first time put in order. A contemporary wag in the 'Times' declared it was the cheapest house ever built, having been built for one sovereign and furnished for another. But the inconvenience with which William IV credited it proved real, and it underwent radical alterations and additions at the instance of the queen and Prince Albert before it was deemed to be adapted for its purpose. An east front was erected to form a quadrangle; the ground behind the house, to the extent of forty acres, was laid out as a pleasure-garden; a conservatory was con-

verted into a chapel, and a ballroom was added as late as 1856. One of the first entertainments which were given at Buckingham Palace was a grand concert on 17 Aug. 1837, under the direction of Signor Costa. In honour of the occasion the queen ordered the court to go out of mourning for the day. The vocalists were Madame Grisi, Madame Albertazzi, Signor Lablache, and Signor Tamburini. The queen's first official appearance in public out of doors took place on 21 Aug., when she opened the new gate of Hyde Park on the Bayswater Road, and conferred on it the name of Victoria. On 22 Aug. she drove to Windsor to assume residence at the castle for the first time. On 28 Sept. she had her earliest experience of a military review, when the guards in Windsor garrison marched before her in the Home Park. After remaining at Windsor till 4 Oct. she made acquaintance with the third and last of the royal palaces then in existence, the pretentious Pavilion at Brighton, which George IV had erected in a foolish freak of fancy. Lord John Russell, the home secretary, together with his wife, stayed with her there. On 4 Nov. she returned to Buckingham Palace.

The queen took a girlish delight in the sense of proprietorship: she actively directed her domestic establishments, and the mode of life she adopted in her palaces was of her own devising. She exercised a constant and wide hospitality which had been long unknown in the royal circle. The entertainments were somewhat formal and monotonous; but, although she was zealous for rules of etiquette, she was never indisposed to modify them if she was thereby the better able to indulge the kindly feeling that she invariably extended to her guests. Most of her mornings were spent at work with Melbourne. In the early afternoon when at Windsor she rode in the park or neighbouring country with a large cavalcade often numbering thirty persons. Later she romped with children, some of whom she usually contrived to include among her guests, or played at ball or battledore and shuttlecock with ladies of the court—a practice which she continued till middle age—or practised singing and pianoforte playing. Dining at half-past seven, she usually devoted the evening to round games of cards, chess, or draughts, while the Duchess of Kent played whist. One of her innovations was the institution of a court band, which played music during and after dinner. When she was settled at Buckingham Palace she gave a

small dance every Monday. She found time for a little serious historical reading, one of the earliest books through which she plodded as queen being Coxe's 'Life of Sir Robert Walpole' (LADY LYTTLETON), and for the first time in her life she attempted novel-reading, making trial of three books by Sir Walter Scott, Fenimore Cooper, and Bulwer Lytton respectively (BURNES, i. 296). A little later she struggled with Hallam's 'Constitutional History' and St. Simon's 'Memoirs.'

Relatives from the continent of Europe were in the first days of her reign very frequent guests. With them she always seemed most at ease, and she showed them marked attention. Vacant garters were bestowed on two of her German kinsmen, who came on early visits to her—the first on her half-brother, the Prince of Leiningen, in July 1837, the next on her uncle, Prince Albert's father, in the year following. The king of the Belgians and his gentle Queen Louise spent three weeks with her at Windsor (August–September 1837), and the visit was repeated for years every autumn. Her first cousin Victoria, daughter of Duke Ferdinand of Saxe-Coburg, who in 1840 married the Duc de Nemours, was also often with her, and shared in her afternoon games. But she was not at the

same time neglectful of her kinsfolk at home. Nothing could exceed the tenderness with which she treated the Dowager Queen Adelaide. On the day of her accession she wrote a letter of condolence, addressing it to 'the Queen' and not to 'the Dowager Queen,' for fear of adding to her grief. A very few days later, before the late king's funeral, she visited the widowed lady at Windsor, and she forbade, of her own motion, the lifting of the royal standard, then at half-mast, to mast-high, as was customary on the arrival of the sovereign. When Queen Adelaide removed from Windsor Castle ultimately to settle at Marlborough House, her royal niece bade her take from the castle any furniture that her residence there had especially endeared to her, and until the old queen's death the young queen never relaxed any of her attentions. To all her uncles and aunts she showed like consideration. She corresponded with them, entertained them, visited them, read to them, sang to them; and she bore with little murmuring her uncles' displays of ill-temper. The Duchess of Cambridge, the last survivor of that generation, died as late as 1889, and no cares of family or state were ever permitted by the queen to interfere with the due rendering of

those acts of personal devotion to which the aged duchess had been accustomed. Even to the welfare of the FitzClarences—William IV's illegitimate children by Mrs. Jordan—she was not indifferent, and often exerted her influence in their interests. At the same time domestic sentiment was rarely suffered to affect court etiquette. At her own table she deemed it politic to give, for the first time, precedence to foreign ambassadors—even to the American envoy, Mr. Stephenson—over all guests of whatever rank, excepting only Lord Melbourne, who always sat at her left hand. For years she declined to alter the practice in favour of the royal dukes and duchesses, but ultimately made some exceptions.

Meanwhile the first general election of the new reign had taken place, and the battle of the rival parties mainly raged round the position and prospects of the queen. The Tories, who were the attacking force, bitterly complained that Melbourne and the Whigs in power identified her with themselves, and used her and her name as party weapons of offence. Lord John Russell, in a letter to Lord Mulgrave, lord-lieutenant of Ireland, had written of her sympathy with the Whig policy in Ireland. Croker, a Tory spokesman, in an article in the 'Quarterly Review' (July 1837), denounced the policy of surrounding her with female relatives of the Whig leaders. Sir Robert Peel argued that the monarchy was endangered by the rigour with which she was ruled by Melbourne, the chief of one political party. Release of the sovereign from Whig tyranny consequently became a Tory cry, and it gave rise to the epigram:

'The Queen is with us,' Whigs insulting say;
'For whom she found us in she let us stay.'
It may be so, but give me leave to doubt
How long she'll keep you when she finds you out.

(*Annual Register*, 1837, p. 239).

Whig wire-pullers, on the other hand, made the most of the recent conduct of the next heir to the throne, the now king of Hanover, the queen's uncle Ernest, who had signalled his accession by revoking constitutional government in his dominions. They spread a report that the new king of Hanover was plotting to dethrone his niece in order to destroy constitutional government in England as well as in Hanover, and a cartoon was issued entitled 'The Contrast,' which represented side by side portraits of the queen and her uncle, the queen being depicted as a charming *ingénue*, and her uncle as a grey-haired beetle-browed villain.

The final result of the elections was not satisfactory to either side. The Tories gained on the balance thirty-seven seats, and thus reduced their opponents' majority; but in the new House of Commons the Whigs still led by thirty-eight, and Melbourne and his colleagues retained office.

Before the new parliament opened, the queen made a formal progress through London, going from Buckingham Palace to the Guildhall to dine in state with the lord mayor. Her passage through the streets evoked an imposing demonstration of loyalty. Fifty-eight carriages formed the procession, in which rode many of the foreign ambassadors. The lord mayor, Sir John Cowan, with the sheriffs, George Carroll and Moses Montefiore, and members of the corporation of London, received the queen at Temple Bar. The banquet lasted from 3.30 in the afternoon till 8.30 in the evening, when the city was ablaze with illuminations. A medal was struck from a design by William Wyon, and the queen's arrival at Temple Bar was pictured in a bas-relief on the monument that now marks the site of the old gate.

On 20 Nov. the queen opened her first parliament, reading her own speech, as was her custom until her widowhood whenever she attended in person. The opening business of the session was a settlement of the royal civil list. Financially the queen's position since her accession had been a source of anxiety.

She inherited nothing, and the crown had lost the royal revenues of Hanover. She had complained to Melbourne of her lack of money for immediate private expenses. He had done little but listen sympathetically, but Messrs. Coutts, who had been bankers to various members of the royal family, came to her rescue with temporary advances. The main question for the government to consider was not merely the amount of the income necessary to maintain the throne in fitting dignity, but the proportion of that income which might be prudently derived from the hereditary revenues of the crown, i.e. revenues from the crown lands. In return for a fixed annuity George III had surrendered a large portion of these revenues, and George IV yielded a further portion, while William IV surrendered all but those proceeding from the duchies of Cornwall and Lancaster, which were held to belong to a different category. At the same time it was arranged, on the accession of William IV, that the general expenses of civil government, which had been previously defrayed out of the king's civil list, should henceforth be

discharged by the consolidated fund, and that of the income allotted to King William only a very small proportion should be applied to aught outside his household and personal expenses; the sole external calls were 75,000*l.* for pensions and 10,000*l.* for the secret service fund. On these conditions King William was content to accept 400,000*l.* instead of 850,000*l.* which had been paid his predecessor, while an annuity of 50,000*l.* was bestowed on his queen consort. His net personal parliamentary income (excluding pensions and the secret service fund) was thus 375,000*l.*, with some 25,000*l.* from the duchies of Lancaster and Cornwall. Radical members of parliament now urged Melbourne to bring the whole of the crown lands under parliamentary control, to deprive the crown of the control and income of the duchies of Lancaster and Cornwall, and to supply the sovereign with a revenue which should be exclusively applied to her own purposes, and not to any part of the civil government. Treasury officials drew out a scheme with these ends in view, but Melbourne rejected most of it from a fear of rousing against his somewhat unstable government the cry of tampering with the royal prerogative. In the result the precedent of William IV's case was followed, with certain modifications. The queen resigned all the hereditary revenues of the crown, but was left in possession of the revenues of the duchies of Lancaster and Cornwall, of which the latter was the lawful appanage of the heir-apparent. The duchy of Cornwall therefore ceased to be the sovereign's property as soon as a lawful heir to the throne was born. It and the duchy of Lancaster produced during the first years of the reign about 27,500*l.* annually, but the revenues from both rose rapidly, and the duchy of Lancaster, which was a permanent source of income to the queen, ultimately produced above 60,000*l.* a year. (The duchy of Cornwall, which passed to the prince of Wales at his birth in 1841, ultimately produced more than 60,000*l.*) Parliament now granted her, apart from these hereditary revenues, an annuity of 385,000*l.*, being 10,000*l.* in excess of the net personal income granted by parliament to her predecessor. Of this sum 60,000*l.* was appropriated to her privy purse, 131,200*l.* to the salaries of the household, 172,500*l.* to the expenses of the household, 13,200*l.* to the royal bounty, while 8,040*l.* was unappropriated. The annual payment from the civil list of 75,000*l.* in pensions and of 10,000*l.* secret service money was cancelled, but permission was given the crown to create

'civil list' pensions to the amount of 1,200*l.* annually, a sum which the treasury undertook to defray independently of the royal income; this arrangement ultimately meant the yearly expenditure of some 28,000*l.*, but the pensions were only nominally associated with the sovereign's expenditure. Repairs to the sovereign's official residences and the maintenance of the royal yachts were also provided for by the treasury apart from the civil list revenues. Joseph Hume, on the third reading of the civil list bill, moved a reduction of 50,000*l.*, which was rejected by 199 votes against 19. Benjamin Hawes vainly moved a reduction of 10,000*l.*, which was supported by 41 members and opposed by 173. Lord Brougham severely criticised the settlement on the second reading of the bill in the House of Lords. He made searching inquiries respecting the incomes from the crown duchies, and objected to the arrangement being made for the queen's life. Although numerous additional grants, approaching a total of 200,000*l.* a year, were afterwards allotted to the queen's children, the annual sum allowed her by parliament on her accession was never altered during her reign of nearly sixty-four years, and proved amply sufficient for all her needs. At the same time as the civil list bill passed through parliament, the queen's mother, at the sovereign's instance, was granted an annuity of 30,000*l.*; she formerly received 22,000*l.* a year, of which 10,000*l.* was appropriated to the care of her daughter while princess. On 23 Dec. 1837 the queen went to parliament to return thanks in person for what had been done. Christmas was spent at Buckingham Palace, and next day the court withdrew to Windsor.

The liberal allowances enabled the queen to fulfil at once her resolve to pay off her father's debts. By the autumn of next year she had transferred to the late duke's creditors from her privy purse nearly 50,000*l.*, and on 7 Oct. 1839 she received their formal thanks. Meanwhile the queen's sympathy with her ministers increased. Through 1838-9 she followed their parliamentary movements with keen anxiety lest their narrow majority might prove inadequate to maintain them in office. Disturbances in Canada during the early months of 1838 roused differences of opinion in the House of Commons, which imperilled their position, but the crisis passed. 'The queen is as steady to us as ever,' wrote Palmerston on 14 April 1838, 'and was in the depth of despair when she thought we were in danger of being turned out. She keeps well in

The queen

debts.

health, and even in London takes long rides into the country, which have done her great good' (ASTLEY, *Life of Palmerston*, i. 344). Under Melbourne's guidance, and in agreement with her own wish, she daily perused masses of despatches and correspondence with exemplary diligence.

Outside politics her chief interest lay in the preparations that were in progress for her coronation and for the festivities accompanying it. Three state balls—one on 18 June, the day of Waterloo, a choice of date which offended the French—two levees, a drawing-room, a state concert, a first state visit to Ascot, and attendance at Eton 'montem' immediately preceded the

The coronation, 28 June 1838. elaborate ceremonial, which took place on 28 June 1838, eight days after the anniversary of her accession. The ministers resolved to endow it with exceptional splendour. For the expenses of William IV's coronation 60,000*l.* had been allowed. No less a sum than 200,000*l.* was voted by parliament for the expenses of Queen Victoria's coronation. Westminster Abbey was elaborately decorated in crimson and gold. The royal procession to the abbey was revived for the first time since the coronation of George III in 1701, and four hundred thousand persons came to London to witness it, many bivouacking in the streets the night before. At 10 A.M. on the appointed day, in magnificent weather, the queen left Buckingham Palace in full panoply of state, passing up Constitution Hill, along Piccadilly, down St. James's Street, and across Trafalgar Square, which had just been laid out in Nelson's memory. The abbey was reached by way of Parliament Street at 11.30. Among foreign visitors, who went blither in advance of the queen, was Marshal Soult, the representative of France, whom the crowds received with hardly less enthusiasm than her majesty. The great company of her German relatives included her uncle the Duke of Saxe-Coburg and her half-brother and half-sister of Loiningen. When the queen entered the abbey, 'with eight ladies all in white, floating about her like a silvery cloud, she paused, as if for breath, and clasped her hands' (STANLEY). A ray of sunlight fell on her head as she knelt to receive the crown, and the Duchess of Kent burst into tears. The brilliancy of the scene impressed every one, but there were some drawbacks. Harriet Martineau, who was present, wrote: 'The brightness, vastness, and dreamy magnificence produced a strange effect of exhaustion and sleepiness.' The queen, too, suffered not only from natural emotion and fatigue, but from the hesitation

of the officiating clergy as to the exact part she was to play in many parts of the long ritual, and from the insufficient training that had been accorded her. 'Pray tell me what I am to do, for they [i.e. the clergy] don't know,' she said at one solemn point to a lay official who stood near her. She complained that the orb which was unexpectedly put into her hand was too heavy for her to hold; and when the ruby ring, which had been made for her little finger, was forced by the archbishop onto her fourth, she nearly cried out with the pain. For the first time at a coronation, the commons were allowed to acclaim her after the peers. The latter had enjoyed the privilege from time immemorial. The commons now cheered their sovereign nine times (*Genl. Mag.* 1838, ii. 198); but Dean Stanley, who, then a boy, sat in a gallery, thought all the responses and acclamations were feebly given. Towards the close of the ceremony a singular accident befell Lord Rolle, a peer, eighty years old, as he was endeavouring to offer his homage. He 'fell down as he was getting up the steps of the throne.' The queen's 'first impulse was to rise, and when afterwards he came again to do homage she said, "May I not get up and meet him?" and then rose from the throne and advanced down one or two of the steps to prevent his coming up, an act of graciousness and kindness which made a great sensation' (GARDINER, 2nd ser. i. 107). While the peers were doing homage, the lord-chamberlain and his officers flung medals, specially designed by Pistrucci, for the spectators to scramble for, and the confusion was not dignified. At length the ceremonial, which lasted more than five hours, ended, and at a quarter past four the queen returned to Buckingham Palace. She then wore her crown and all her apparel of state, but she looked to spectators pale and tremulous. Carlyle, who was in the throng, breathed a blessing on her: 'Poor little queen!' he added, 'she is at an age at which a girl can hardly be trusted to choose a bonnet for herself; yet a task is laid upon her from which an archangel might shrink.' But despite her zeal to fulfil the responsibilities of her station, she still had much of the child's lightness and simplicity of heart. On returning to the palace she hastily doffed her splendours in order to give her pet spaniel, Dash, its afternoon bath (LESLIE). She then dined quietly with her relatives who were her guests, and after sending a message of inquiry to the unfortunate Lord Rolle, concluded the day by witnessing from the roof of the palace the public illuminations and fireworks in the

Green and Hyde Parks. Next morning a great 'coronation' fair was opened by permission of the government for four days in Hyde Park; and on the second day the queen paid it a long visit. The coronation festivities concluded with a review by her of five thousand men in Hyde Park (9 July), when she again shared the popular applause with Marshal Soult. A month later (16 Aug.) she prorogued parliament in person, and, after listening to the usual harangue on the work of the session from the speaker of the House of Commons, read her speech with customary clearness.

A few months later the queen was to realise that her popularity was not invulnerable, and that, despite Melbourne's parental care, her position was fraught with difficulty and danger, with which she was as yet hardly fitted to cope. With both the crises through which the queen and her court passed in the first half of 1839, her youth and inexperience prevented her from dealing satisfactorily. In January 1839 Lady Flora

The episode
of Lady
Flora
Hastings.

Hastings, daughter of the Marquis of Hastings, was lady-in-waiting to the Duchess of Kent at Buckingham Palace. On account of her appearance, she was most improperly suspected by some of the queen's attendants of immoral conduct. Neither the queen nor her mother put any faith in the imputation, but Lady Tavistock informed Melbourne of the matter, and the queen assented to his proposal that the unfortunate lady should be subjected by the royal physician, Sir James Clark, to a medical examination. Clark afterwards signed a certificate denying all allegations against Lady Flora (17 Feb. 1839). The incident was soon noised abroad. The lady's family appealed directly to the queen to make fitting reparation. Lady Flora's brother, the Marquis of Hastings, obtained an interview with her. Lady Flora's mother wrote her passionate letters and begged for the dismissal of Sir James Clark. The queen made no reply. Melbourne stated that she had seized the earliest opportunity of personally acknowledging to Lady Flora the unhappy error, but that it was not intended to take any other step. Lady Hastings published her correspondence with the queen and Melbourne in the 'Morning Post,' and Clark circulated a defence of his own conduct. A general feeling of disgust was roused, and the reputation of the court suffered, especially with the conservative section of the nobility to which the Hastings family belonged. The situation was rendered worse by the tragic ending of the episode. Lady

Flora was suffering from a fatal internal disease—the enlargement of the liver. On 4 July she was announced to be dying at Buckingham Palace. A royal banquet which was to take place that evening was countermanded (*MILNERSBURG'S Memoirs*, p. 77). The lady died next day. The queen was gravely perturbed. Society was depressed and shocked. The blunder which the queen's advisers had committed was bad enough to warrant an unmistakable expression of her personal regret, and her innocent supineness, for which the blame was currently laid on the Baroness Lehzen, was a calamity.

The second court crisis of 1839 was due to a precisely opposite cause—to the queen's

Her first
ministerial
crisis, May
1839.

peremptory exercise of her personal authority without consulting any one. During the session of 1839 the whig ministry finally lost its hold on the House of Commons. The recent emancipation of the slaves in Jamaica had led the planters into rebellion, and the government was driven to the disagreeable necessity of inviting parliament to suspend the constitution. The proposal was carried by a majority of only five (7 May). Melbourne felt the position to be hopeless, and placed the resignation of himself and his colleagues in the queen's hands. The queen was deeply distressed. When Lord John, leader of the House of Commons, visited her to discuss the situation, she burst into tears. But she soon nerved herself fully to exert for the first time the sovereign's power of choosing a successor to the outgoing prime minister. Her grief at parting with Melbourne was quickly checked. She asked him for no advice, but, after consulting Lord Spencer, she sent for the Duke of Wellington, and startled him by her self-possession (8 May). He declined her offer to form a ministry on the ground of his age and of the desirability of the prime minister being in the House of Commons. Accordingly she summoned Sir Robert Peel, the leader of the conservative opposition in the lower house. She feared his coldness and severity of manner, but her personal demeanour at their first interview was dignified, although very frank. She deprecated a dissolution of parliament at so early a date in the life of the existing parliament. Peel vaguely expressed sympathy with her view, but declined to pledge himself not to advise a dissolution. He, however, accepted without demur her commission to form the government, and, on leaving her, set about selecting members of the cabinet. There was already a strong feeling among the conservatives that the queen, who had hitherto

shrink from association with conservatives, was lodged in on all sides of her household by the female relatives of her whig ministers. Peel, in consultation with his friends, decided that the ladies holding the higher posts in the household must be displaced if conservative ministers were to receive adequate support from the crown. He had no intention of interfering with the subordinate offices, but deemed it essential to remove some at least of the ladies from such posts as those of mistress of the robes or of lady-in-waiting. Peel formed a high conception of his responsibility, and was willing to consult the queen's wishes in filling all appointments that might fall vacant. Unfortunately he did not define at the outset the precise posts or the number of them which were affected by his proposals. The subject was broached in a personal interview (9 May). The queen feared that she was to be deprived of the companionship of her closest friends, and suspected—quite incorrectly—that the Baroness Lehzen was aimed at. She declined point blank to entertain any suggestion of change in the female constitution of her household. After Peel left her she wrote to Melbourne that they wanted to deprive her of her ladies; they would rob her next of her dressers and housemaids; they thought to treat her as a girl; she would show them she was queen of England. Finally she requested her old minister to draft a reply of refusal to Peel's demands. Melbourne expressed no opinion, but did as he was asked. The queen's letter to Peel ran: 'Buckingham Palace, May 10, 1839.—The Queen, having considered the proposal made to her yesterday by Sir Robert Peel to remove the ladies of her bedchamber, cannot consent to adopt a course which she conceives to be contrary to usage, and which is repugnant to her feelings. Peel answered that he feared there was some misunderstanding, and declined to proceed to the formation of a government.

Peel's decision was received by the queen with immense relief, which she made no endeavour to conceal at a state ball that took place the same evening. With every sign of satisfaction she appealed to Melbourne to resume power. Although her action was her own, Melbourne had given it a tacit approval by not resisting it, when she first informed him of her intention. The old cabinet met on 11 May; some members argued for advising the queen to withdraw from the attitude that she had assumed. But Lord Spencer insisted that as gentlemen

they must stand by her. Palmerston declared that her youth and isolation should have protected her from the odious conditions that Peel sought to impose. At length the good-natured Melbourne acquiesced in that opinion, and the whigs returned to office. The episode formed the topic of animated debate in both houses of parliament. Peel defended his action, which Lord John Russell lamely endeavoured to prove to be without precedent. Melbourne thoroughly identified himself with the queen, and was severely handled from different points of view by both the Duke of Wellington and Lord Brougham. In point of fact Peel's conduct was amply warranted, and subsequently Melbourne, Lord John Russell, and the queen herself admitted as much. In 1863 she confessed to Lord John that she had taken no advice in the matter. 'No,' she said, 'it was entirely my own foolishness!' Melbourne afterwards remarked characteristically: 'You should take care to give people who are cross time to come round. Peel's fault in that business, when he failed to form a government, was not giving the queen time to come round.'

The momentary effect of the queen's act was to extend by more than two years the duration of Melbourne's ministry, and to embitter the personal hostility of the Tories towards her. James Bradshaw, the Tory M.P. for Canterbury, made in July so violent an attack upon her at a conservative meeting that the whig M.P. for Cockermouth, Edward Horsman, challenged him to a duel, which was duly fought. But the permanent outcome of the crisis was to the good. The queen never repeated her obduracy, and although she often asserted her authority and betrayed her personal predilection when a new ministry was in course of creation, the nineteen changes of government that followed during her reign were effected with comparatively little friction. The 'household' difficulty never recurred. Ladies-in-waiting at once ceased to be drawn from the families of any one political party, and as early as July 1839 the queen invited Lady Sandwich, the wife of a Tory peer, to join the household. It became the settled practice for the office of mistress of the robes alone to bear a political complexion, and for its holder to retire from office with the party to which she owed her appointment. Increases of years and the good counsel of a wise husband were to teach the queen to exercise with greater tact that habit of command which was natural to her, and to bring under firmer control the impatience and quickness of her temper.

Absorption in the sovereign's work, the elation of spirit which accompanied the major part of her new experiences, the change from dependence to independence in her private affairs, put marriage out of her mind during the first two years of her reign. But King Leopold had no intention of quietly allowing his choice of her cousin Albert for her husband to be thwarted. Early in 1888 he reminded her of the suggestion. She replied that she and the prince, who was of her own age, were too young to think of marriage yet, and she claimed permission to defer a decision till the end of three years. King Leopold summoned Prince Albert to Brussels in March and explained the situation. Albert assented with some hesitation to the queen's proposal of delay. He assumed that in her proud elevation she would ultimately seek in marriage a partner of more exalted rank than a youngson of a poor and undistinguished German duke. But Stockmar was as zealous in Albert's cause as his uncle Leopold. He had left the queen's side at the end of 1888 for the first time since her accession, and accompanied Prince Albert on a tour in Italy with a view to keeping him faithful to the plan and to instructing him betimes, in case of need, in the duties of the consort of a reigning English monarch. Among the English courtiers doubts of the success of the innocent conspiracy were freely entertained. Such members of the large Coburg family as visited the queen at this period were too 'deutsch' in manner to recommend themselves to her English attendants (LADY LYTTELTON). 'After being used to agreeable and well-informed Englishmen, I fear she will not easily find a foreign prince to her liking,' Lord Palmerston wrote in April 1888. Several names besides Prince Albert's were, too, freely canvassed as those of suitable candidates for her hand (cf. *Stafford House Letters*, p. 223). Another first cousin, Prince George of Cambridge (now Duke of Cambridge), was often in her society. The Duc de Nemours (brother of the queen of the Belgians and son of Louis Philippe) and a prince of the Prussian reigning family were believed to possess attractions, both in her sight and in that of some of her advisers. In May 1889 she entertained at Windsor the tsarevitch of Russia (afterwards Tsar Alexander II) and Prince William Henry, younger son of King William II of the Netherlands; and both the young men were reported to aspire to her hand.

The social and political embarrassments of the first half of 1889 gave the queen a

sense of isolation, which rendered the prospect of marriage more congenial to her than it was before. At the same time she suffered much annoyance from a number of offers of marriage made to her by weak-minded subjects, several of whom forced themselves personally on her notices when she was riding out, or even gained entrance to her palaces. King Leopold, who was her guest at Windsor in September 1889, was not slow to use the opportunity. He arranged that Prince Albert and his elder brother Ernest should stay at the English court next month. Nothing was said to the queen of the objects of the mission. On 10 Oct. the young men arrived at Windsor, bearing a letter from King Leopold commending them to her notice. Many guests were there, besides Lord Melbourne. For four days the princes joined the queen and her crowded retinue in the ordinary routine of afternoon rides, evening banquets, and dances, but during the entertainments she contrived to have much talk with Albert, and suddenly a genuine and overpowering affection between them declared itself. On 16 Oct. she summoned the prince to her room, and, taking full advantage of her royal station, offered him marriage. It was 'a nervous thing' to do, she afterwards told her aunt, the Duchess of Gloucester; but, she added, it would not have been possible for him to propose to the queen of England (*Peel Papers*, ii. 414). Melbourne, who took the wise view that in the choice of a husband it was best for the queen to please herself, thought Prince Albert too young and untrained for the position, but hoped for the best and was warm in his congratulations.

The queen sent the information at once to King Leopold, but the public announcement was delayed for more than a month. During that period the queen and her affianced lover were rarely separated either in public or private. The prince was conspicuously at her side at a review of the rifle brigade which she held in the Home Park on 1 Nov. On the 14th the visit of Albert and his brother came to an end. Next day the queen wrote with delightful naïveté to all members of the royal family announcing her engagement. Sir Robert Peel saw the communication she sent to Queen Adelaide, and, although he regarded the match with little enthusiasm, said she was 'as full of love as Juliet' (*Croker Papers*). On 20 Nov. she left Windsor for Buckingham Palace, where on 23 Nov. she made the official declaration, which Melbourne had drawn up, to an ex-

traordinary meeting of the privy council. No less than eighty-three members were present. The queen wore on her arm a bracelet enclosing the prince's miniature; although her hand shook, she read her short and simple speech without hesitation, and accepted the congratulations of her councillors with composure.

The news was received by the public with mixed feeling. Daniel O'Connell, when he

Reception of
the news.

spoke of it at a meeting at Bandon, gave vent to ludicrous hypotheses of joy. But there were ominous murmurs amid the popular applause. Little was definitely known of the prince, excepting that he was German and very young. The tories took for granted that he was of 'liberal' opinions—an assumption which did not please them—and while some agreed that he owed his good fortune to his distaste for affairs of state and his fondness for empty amusement, others credited him with perilously stirring ambitions (*Peel Papers*, ii. 408-9). Although it was notorious that the Saxe-Coburg house was staunchly Lutheran, two of its members, King Leopold and Prince Ferdinand, had lately married catholics, and a foolish rumour circulated that Albert was a papist. At foreign courts, and even in his own domestic circle, it was felt that the prize the prince had won was above his station. The queen, who saw the situation only through the haze of true womanly affection, deplored the sacrifice of family and country which she regarded the prince as making for her sake. She pressed her ministers to secure for him wellnigh every honour that she enjoyed, in order to compensate him for his expatriation. Like Queen Mary, she entreated that her husband should be created a king consort. The ministers pointed out that Prince Albert's rank, as well as his household and emoluments, must correspond with those accorded the last prince consort, Prince George of Denmark, and she was galled by the comparison of her lover with 'the stupid and insignificant husband of Queen Anne,' as she called him. The final decision rested with parliament, and Melbourne made no effort to force its hand. The session opened on 10 Jan. 1840, and the queen, in the speech which she read from the throne, spoke of her approaching marriage. Melbourne found himself in a critical situation. While the queen demanded a far higher status for her future husband than precedent warranted, a majority in both houses of parliament showed signs of a resolve to grant her less. Stockmar, who had resumed residence with the queen

in order to watch the position of affairs and give her private advice, wisely recommended a consultation between whigs and tories so as to avoid public disputes, but he gained no hearing. The ministers proposed to grant Prince Albert an annuity of 50,000*l.*, the sum granted to the queen consorts of George II, George III, and William IV. Joseph Hume moved an amendment to reduce the sum to 21,000*l.* on his favourite ground of economy. This was negatived by 305 to 38; but Colonel Sibthorp, a tory of a very pronounced kind, who echoed the general sentiment of dissatisfaction, moved another amendment to reduce the sum to 30,000*l.* He received exceptionally powerful support. Sir Robert Peel spoke in his

Attacks on
prince by
parliament.

favour. Sir James Graham denied that the parallel with the position of the queen consorts could be sustained; the independent status of the queen consort, he said, not very logically, was recognised by the constitution, but the prince consort stood in no need of a separate establishment. On a division the reduction was carried by the large majority of 101, the votes being 222 to 158. Sir Robert Peel and his friends made emphatic protests against insinuations of disloyalty, and denied that the tories were 'acting from a spiteful recollection of the events of last May.' Lord John Russell insisted that the vote was an insult to the sovereign. Colonel Sibthorp further proposed in committee that, should the prince survive the queen, he should forfeit the annuity if he remarried a catholic, or failed to reside in the United Kingdom for at least six months a year. This motion was disavowed by Peel, who agreed that it implied a want of confidence in the prince, and it was rejected. But the whole proceedings deeply incensed the queen, and King Leopold wrote that the action of the commons was intolerable.

The House of Lords was in no more amiable mood. The Duke of Wellington carried an amendment to the address censuring ministers for having failed to make a public declaration that the prince was a protestant and able to take the holy communion in the form prescribed by the church of England—a point on which Stockmar had already given the ministers satisfactory assurances in private. When, on 27 Jan., the bill for the naturalisation of the prince was introduced into the upper chamber, it contained a clause giving him precedence next after the queen. The royal dukes of Sussex and Cambridge had agreed to accept a position below the queen's husband; but the king of Hanover, who was still Duke of

Cumberland, bluntly declined to give way to any 'paper royal highness;' and his protest found much sympathy in the lords. Melbourne argued that he was following the precedent set in the case of Philip and Mary, but was willing to modify the clause so as to give the heir-apparent, when he should arrive, precedence of his father. The concession was deemed inadequate, and the clause was withdrawn. Thereupon the naturalisation bill passed without further opposition. Subsequently Greville, the clerk of the council, issued a paper proving that the queen could grant her husband by royal warrant what precedence she chose without any appeal to parliament, and she acted accordingly, giving him the next place to her. But, to the queen's obagrin, foreign courts declined to recognise in him any rank above that of his hereditary honours. Another difficulty arose with regard to the choice of his personal attendants. It was deemed inadvisable to allow him to appoint a private secretary for himself. A German was not reckoned fit for the post. Melbourne nominated his own private secretary, George Anson.

Meanwhile the marriage was fixed for 10 Feb. Before the parliamentary wrangle ended, Lord Torrington and Colonel Grey had been sent to Coburg to invest the prince with the insignia of the Garter, and to conduct him to England. On 28 Jan. the prince with his father and brother left Coburg. At Brussels he met his uncle Leopold. On 7 Feb. he was at Dover. Next day he was received with much enthusiasm in London, and on reaching Buckingham Palace the oaths of naturalisation were administered to him by the lord chancellor. On the 10th the wedding took place in the chapel of St. James's Palace, and after an elaborate breakfast at Buckingham Palace the bride and bridegroom drove to Windsor amid vociferous acclamations. Two days later they were visited by the Duchess of Kent, the Duke of Coburg, and others, and on 14 Feb. returned to London. On 19 Feb. the queen held a levee, and the prince stood at her left hand.

III

With her marriage a new era in the queen's life and reign began. From a personal point of view the union realised the highest ideal of which matrimony is capable. The queen's love for her husband was without alloy, and invested him in her sight with every perfection. He, on his part, reciprocated her affection, and he made

Prince Albert's character and influence on the queen.

her happiness the main object of his life. Intellectually and morally he was worthy of his position. He was admirably educated; his interests were wide; he was devoted to art, science, and literature; his life was scrupulously well ordered; he was sagacious, philanthropic, conscientious, and unselfish. His example and influence gave new weight and stability to the queen's character and temperament, and her knowledge and experience grew. But outside the domestic circle the prince was not liked. He was cold and distant in manner, and his bearing, both mental and physical, was held to be characteristically German. It was out of harmony with the habitual ease and levity of the English aristocracy. He had no active sense of humour, no enthusiasm for field sports, no vices; he abhorred late hours, and did not conceal his disdain for many of the recreations in which the English leisured classes indulged. His public position was at the same time ill-defined. There was a jealous fear that his private influence with the queen and his foreign prejudices might affect her public action. Resentment at any possible interference by him in affairs of state quickly spread abroad. Although Melbourne gave the queen permission to show him official papers, he was during the first two years of his settlement in England excluded from her interviews with ministers. He felt his position to be one of humiliation. He was 'the husband, not the master of the house,' he wrote in May 1840 to his friend, Prince William of Löwenstein.

It was never with the queen's concurrence that he filled a rank in her household subordinate to herself. On 28 Dec. 1841 she wrote in her journal: 'He ought to be, and is above me in everything really, and therefore I wish that he should be equal in rank with me.' As his abilities came to be recognised by ministers, they gradually yielded to her persuasion to take him fully into their counsels. He was allowed to act as her private secretary. The cares of maternity were soon to distract her on occasion from the details of public duty, and her dependence on her husband in all relations naturally increased. Ultimately Prince Albert assumed in behalf of his wife in reality, although not in form, most of her responsibilities, and his share in the rule of the country through most of the twenty-one years of their married life is indistinguishable from hers. 'Lord Melbourne was very useful to me,' she said many years afterwards, 'but I can never be sufficiently thankful that I passed safely through those two years

to my marriage. Then I was in a safe haven, and there I remained for twenty[-one] years,' (ПРОТННО, *Life of Dean Stanley*, ii. 127).

As soon as the prince finally settled down to his new life he regarded it as his duty (as he wrote in 1850 to the Duke of Wellington) to 'fill up every gap which, as a woman, she would naturally leave in the exercise of her regal functions, continually and anxiously to watch every part of the public business, in order to be able to advise and assist her at any moment, in any of the multifarious and difficult questions or duties brought before her, sometimes international, sometimes political, or social, or personal.' He claimed to be of right 'the natural head of her family, superintendent of her household, manager of her private affairs, sole confidential adviser in politics, and only assistant in the communications with the officers of the government.' At the same time he was, he pointed out, 'the husband of the queen, the tutor of the royal children, the private secretary of the sovereign, and her permanent minister.' The defect and danger of such a claim lay, according to the constitution of the country, in the fact that the prince was under no parliamentary control, and his description of himself as the queen's 'permanent minister' was inexact. Substantially, however, the statement truthfully represented the prince's functions and occupation during his career as Queen Victoria's consort. But a large section of the public never willingly acquiesced in his exercise of so much activity and authority. Until his death he had to run the gauntlet of a galling and unceasing public criticism, and the queen, despite her wealth of domestic happiness, was rarely free from the sense of discomfort and anxiety which was bred of a consciousness that many of her subjects viewed her husband with dislike or suspicion. But from 1811 to 1861, the date of his death, the fact is unassailable that Prince Albert had as good a right as the queen to be regarded as the ruler of the British realm.

On the queen's marriage the Duchesses of Kent at once removed from the royal palace, and the Baroness Lehzen soon afterwards retired from the queen's service. These changes in the royal household disposed of checks which might have seriously limited the development of Prince Albert's influence. The supercession of both mother and *gouvernante* was effected without friction. The curmudgeonly king of Hanover declined the queen's request to give up to the Duchesses of Kent his apartments in St. James's

Palace which he never occupied, and thereupon the queen rented for her mother Ingestre House, Belgrave Square, at 2,000*l.* a year; but on the death of the Princess Augusta in September, Clarence House, St. James's Palace, was made over to her, together with Frogmore Lodge at Windsor. Hardly a day passed without the exchange of visits. As a rule, the duchess both lunched and dined with her daughter. The Baroness Lehzen left England in October 1842 for her native country of Hannover, finally settling with a sister at Buckeburg (cf. BLOOMFIELD, *Reminiscences*, i. 215). For many years the queen found time to write her a letter once a week, an interval which was subsequently lengthened to a month at the baroness's own considerate request; the correspondence was maintained until the baroness's death in 1870. Stockmar alone of the queen's early confidential attendants retained his position after her marriage; until 1857 he spent the autumn, winter, and spring of each year with the queen and Prince Albert, and occupied rooms in their palaces. On every domestic or public question that arose both the queen and prince looked to him for private guidance.

Amid the festivities which celebrated the early days of married life general alarm was caused by an attack on the queen's life. The outrage had no political significance, and served to increase her popularity. On 10 June 1840, a brainless potboy, Edward Oxford, fired two shots at her from a pistol as she was driving through the Green Park from Buckingham Palace to Hyde Park Corner. She was unhurt, and to all appearance unmoved, and after making a call at her mother's house to assure her of her safety, she continued her customary drive in Hyde Park. The lad was arrested and was mercifully pronounced to be insane. Addressee of congratulation were presented by both houses of parliament. On 12 June 1840—two days after the incident—a concert was given at Buckingham Palace under Coen's direction, and the queen herself took part in no less than five numbers, singing in a duet with Prince Albert, and in a trio with Signora Rubini and Lablache, and in three choruses. A week or two later a magnificent reception was accorded her at Ascot. Next month the approaching birth of an heir to the throne was announced, and, in accordance with the queen's wish, a bill was passed constituting Prince Albert regent in case of her death, provided that he did not remarry a catholic and that he resided in the country. Prince Albert, by the advice of Stockmar, and with

The prince's public position.

The attempt on the queen's life, 10 June 1840.

Changes in the palace.

the full concurrence of Melbourne, had already given proof of an anxiety to relieve the strained relations between the court and the tories. Their leaders had been entertained by the queen, and she had shown them marked civility. With the Duke of Wellington every effort was made to maintain cordial relations, and he reciprocated the advances with alacrity. The Duke of Sussex, whose critical attitude to the queen still caused her discomfort, was partially conciliated by the bestowal of the title of Duchess of Inverness on his morganatic wife, and in April, when the queen and Prince Albert attended a great ball at Lansdowne House, she permitted the new duchess to sup at the royal table. The pacific atmosphere which was thus engendered had the agreeable effect of stifling opposition to the nomination of Prince Albert to the regency. In the House of Lords the Duke of Sussex alone resisted it on the ground that the rights of 'the family' were ignored. On 11 Aug., when the queen prorogued parliament in person, the prince sat in an arm-chair next the throne, and, although objection was feared, none was raised. His predominance was treated as inevitable. On 28 Aug. he received the freedom of the city. On 11 Sept. he was admitted to the privy council. On 5 Feb. 1841 the queen ordered his name to be inserted in the liturgy.

Meanwhile, on 21 Nov., the queen's first child, a daughter, was born at Buckingham Palace. Her recovery from the confinement was rapid, and she was removed to Windsor for the Christmas holidays. On 10 Feb., the anniversary of her marriage, the child, the princess royal of England, was baptised at Buckingham Palace in the names of Victoria Adelaide Mary Louisa. The sponsors were the prince's father, the queen's mother, and her uncle Leopold, besides the Dowager Queen Adelaide, the Duchess of Gloucester, and the Duke of Sussex. The Duke of Saxe-Coburg was unable to attend in person, and the queen by her own motion chose the Duke of Wellington to represent him. The last trace of animosity in regard to Wellington on account of his open objections to the queen's marriage was now removed. 'He is,' the queen wrote in her journal, 'the best friend we have.'

Meanwhile politics were casting clouds on the joys of domestic life. The queen was to suffer, for the first of many times, that conflict of feeling between her private obligations to her foreign kindred and her public obligations to her country, which,

despite an instinctive repugnance to unworthy concessions in the sphere of foreign diplomacy, was liable to involve her in difficulties with her advisers. Under Prince Albert's guidance and in accordance with her own predisposition, the queen regarded foreign affairs as peculiarly within the sovereign's province, and the prince, who with Melbourne's assent now enjoyed access to foreign despatches, claimed in behalf of the queen the full right to a voice in consultation before any action was taken by the government abroad. Palmerston, the mas-

terful minister of foreign affairs, was reluctant to recognise the existence outside parliament of any check on his independence.

This attitude at once caused vexation in the royal circle, and after prolonged heartburnings ultimately led to an open rupture. The immediate cause of divergence between the queen and her foreign minister was due to affairs in the east of Europe, which threatened a breach in the friendly relations of France and England. Egypt under her viceroy, Mehemet Ali, was seeking to cast off her allegiance to the sultan of Turkey. France encouraged the act of rebellion, while England and the rest of the great powers took Turkey under their protection. The queen and Prince Albert loathed the prospect of war with France,

with whose sovereign, Louis Philippe, they had, through repeated intermarriages, close domestic relations; and the added likelihood that the dominions of her uncle and political ally, King Leopold, would, in case of war between England and France, be invaded by a French army filled the queen with alarm.

Divisions in the cabinet encouraged resolute intervention on her part. In opposition to Lord John Russell's views, Palmerston, minister of foreign affairs, decided that the best way of dissipating all risk of French predominance in Egypt was to crush Mehemet Ali at once by force of English arms. The queen entreated Melbourne to reconcile his divided colleagues, to use his influence against Palmerston, and to seek a pacific settlement with France. But Palmerston stood firm. By his orders the British fleet forced Mehemet Ali to return to his allegiance to the sultan (November 1840). The minister's victory was more complete than he anticipated. Louis Philippe, to the general surprise, proved too pusillanimous to take the offensive in behalf of his friend in Egypt, and he finally joined the concert of the powers, who in July 1841 pledged themselves by

treaty to maintain Turkey and Egypt *in statu quo*. The incident evoked in the French king, in his ministers, and in King Leopold a feeling of bitterness against Palmerston which found a ready echo in the minds of Queen Victoria and the prince.

Before this foreign crisis terminated, the retirement of Melbourne's ministry, which the queen had long dreaded, took place. The prospect of parting with Melbourne, her tried counsellor, caused her pain. But, in anticipation of the event, hints had been given at Prince Albert's instance by the court officials to the tory leaders that the queen would interpose no obstacle to a change of government when it became inevitable, and would not resist such reconstruction of her household as might be needful. The blow fell in May. The whig ministers introduced a budget which tended towards free trade, and on their proposal to reduce the duty on sugar they were defeated by a majority of 36. Sir Robert Peel thereupon carried a vote of confidence against them by one vote. Moved by the queen's feelings, Melbourne, instead of resigning, appealed to the country. Parliament was dissolved on 29 June.

Defeat of
Melbourne.

In June, amid the political excitement, the queen paid a visit to Archbishop Harcourt at Nuncham, and thence she and Prince Albert proceeded to Oxford to attend commemoration. The Duke of Wellington, the chancellor of the university, presided, and conferred on the prince an honorary degree. The queen was disturbed by the hisses which were levelled at the whig ministers who were present, but she was not the less willing on that account to give further proof of her attachment to them, and she seized the opportunity to pay a series of visits among the whig nobility. After spending a day or two with the Duke of Devonshire at Chatsworth, the royal party next month were entertained by the Duke of Bedford at Woburn Abbey and by Lord Cowper, Melbourne's nephew, at Panshanger. From Panshanger they went to lunch with Melbourne himself at his country residence, Brockton Park. The general election was proceeding at the time, and the whigs made the most out of the queen's known sympathy with them and of her alleged antipathy to their opponents. But, to the queen's dismay, a large tory majority was returned.

The new parliament assembled on 19 Aug. 1841. For the first time in her reign the queen was absent and her speech was read by the lord chancellor, an indication that the constitution of the House of Commons was

not to her liking. Melbourne's ministry remained in office till the last possible moment, but on 28 Aug. a vote of confidence was refused it by both houses of parliament; the same evening Melbourne saw the queen at Windsor and resigned his trust. She accepted his resignation in a spirit of deep dejection, which he helped to dissipate by an assurance of the high opinion he had formed of her husband. In conformity with his advice she at once summoned Sir Robert Peel, and although she spoke freely to him of her grief in separating from her late ministers, she quickly recovered her composure and discussed the business in hand with a correctness of manner which aroused in Peel enthusiastic admiration. He promised to consult her comfort in all household appointments. The Duchess of Buccleuch replaced the Duchess of Sutherland as mistress of the robes, and the Duchess of Bedford and Lady Normanby voluntarily made way for other ladies-in-waiting. By September the new government was fully constituted, and the queen had the tact to treat her new ministers with much amiability. Peel adapted himself to the situation with complete success. He and the queen were soon the best of friends. Accepting Melbourne's hint, he fully yet briefly explained to her every detail of affairs. He strictly obeyed her request to send regularly and promptly a daily report of proceedings of interest that took place in both the houses of parliament. Melbourne was thenceforth an occasional and always an honoured guest at court, but the queen accustomed herself without delay to seek political guidance exclusively from Peel.

The queen's absence at the prorogation of parliament on 7 Oct., after a short autumn session, was due to personal affairs of the prince of Wales, and to no want of confidence in her new advisers. On 9 Nov. 1841 her second child, a son and heir, was born at Buckingham Palace. The confinement was imminent for several weeks, and, though she hesitated to appear in public, she, with characteristic spirit, continued 'to write notes, sign her name, and declare her pleasure up to the last moment, as if nothing serious were at hand' (Sir James Graham, *op. Croker Papers*, ii. 408). Sir Robert Peel had accepted an invitation to dine with her on the night of the child's birth. Much public and private rejoicing followed the arrival of an heir to the throne. Christmas festivities were kept with great brilliancy at Windsor, and on 10 Jan. the christening

took place in St. George's Chapel with exceptional pomp. Vague political reasons induced the government to invite Frederick William, king of Prussia, to be the chief sponsor; the others were the Duke of Cambridge, Princess Sophia, and three members of the Saxe-Coburg family. To the king of Prussia, who stayed with her from 22 Jan. to 4 Feb., the queen paid every honour (BUNSEN, ii. 7). Subsequently he took advantage of the good personal relations he had formed with the queen to correspond with her confidentially on political affairs. Adverse criticism was excited by the bestowal on the prince of Wales of the title of Duke of Saxony, and by the quartering of the arms of Saxony on his shield with those of England. Such procedure was regretted as a concession by the queen to her husband's German predilections. On 8 Feb. 1842, when the queen opened parliament and the king of Prussia accompanied her, there was no great display of popular loyalty (FANNY KIMBLE's *Records*, ii. 181), but she impressed her auditors by referring in the speech from the throne to the birth of her son as 'an event which has completed the measure of my domestic happiness.' When a week later she went with her young family to stay a month at the Pavilion at Brighton, her presence excited more public demonstration of goodwill than was convenient (LADY BROOMFIELD's *Reminiscences*), and the queen and Prince Albert, conceiving a dislike for the place, soon sought a more sequestered seaside retreat.

The season of 1842 combined agreeable with distasteful incidents. The first of a brilliant series of fancy dress balls took place to the queen's great contentment at Buckingham Palace on 12 May; the prince appeared as Edward III and the queen as Queen Philippa. Some feeling was shown in France at what was foolishly viewed as the celebration of ancient victories won by the English over French arms. The entertainment was charitably designed to give work to the Spitalfields weavers, who were then in distress. A fortnight later the queen and court went in state to a ball at Covent Garden theatre, which was organised in the interest of the same sufferers.

In June the queen had her first experience of railway travelling, an event of no little interest to herself and of no little encouragement to the pioneers of a mechanical invention which was to revolutionise the social economy of the country. She went by rail from Windsor to Paddington. Court etiquette required that the master of the horse and the

coachmen under his control should actively direct the queen's travels by land, and it was difficult to adapt the old forms to the new conditions of locomotion. The queen, who thoroughly enjoyed the experiment, thenceforth utilised to the fullest extent the growing railway systems of the kingdom.

Unhappily two further senseless attempts on her life, which took place at the same time, marred her sense of security, and rendered new preventive legislation essential. In her attitude to the first attempt the queen and Prince Albert showed a courage which bordered on imprudence. On Sunday, 29 May, Prince Albert noticed that a man pointed a pistol at the queen as she drove past him in her carriage through the Green Park. She and the prince resolved to pass the same spot on the following afternoon in order to secure the arrest of the assailant. The bold device succeeded. 'She would much rather,' she said, 'run the immediate risk at any time than have the presentiment of danger constantly hovering over her.' The man, whose name was found to be John Francis, fired at her, happily without result, and, being captured, was condemned to death, a sentence which was commuted to transportation for life. On the evening following the outrage the queen visited the opera to hear the 'Prophète,' and was cheered rapturously. But the danger was not past. On 3 July, when the queen was driving in the Mall with the king of the Belgians, who happened to be her guest, a crippled lad, John William Bean, sought in an aimless, half-hearted way to emulate the misdeeds of Francis and Oxford. Such contemptible outrages could, according to the existing law, be treated solely as acts of high treason. Now Peel hastily passed through parliament a 'bill for providing for the further protection and security of her majesty's person,' the terms of which made the offence to attempt to hurt the queen a misdemeanour punishable by either transportation for seven years or imprisonment for three with personal chastisement.

In the autumn Peel organised for the queen a holiday in Scotland. Chartist riots were distracting the country, but Peel and Sir James Graham, the home secretary, believed that the expedition might be safely and wisely made. It was the first visit that the queen paid to North Britain, and it inspired her with a lifelong regard for it and its inhabitants. The first portion of the journey, from Windsor to Paddington, was again made,

First visit to Scotland.

The queen travels by rail.

by rail. At Woolwich the royal party embarked on the Royal George yacht on 29 Aug., and on 1 Sept. they arrived at Granton pier. There Sir Robert Peel, at the queen's request, met them. Passing through Edinburgh they stayed with the Duke of Buccleuch at Dalkeith, where on 5 Sept. the queen held a drawing-room and received addressees. Next day they left for the highlands, and, after paying a visit to Lord Mansfield at Seau, were accorded a princely reception by Lord Breadalbane at Taymouth. A brief stay with Lord Willoughby at Drummond Castle was followed by their return to Dalkeith, and they left Scotland by sea on the 15th. Not only was the queen enchanted with the scenery through which she passed, but the historic associations, especially those connected with Mary Stuart and her son, deeply interested her, and she read on the voyage with a new zest Sir Walter Scott's poems, 'The Lady of the Lake' and 'The Lay of the Last Minstrel' (*Leaves from the Queen's Journal, 1877, pp. 1-28*). Before embarking she instructed Lord Aberdeen to write to the lord advocate an expression of her regret that her visit was so brief, and of her admiration of the devotion and enthusiasm which her Scottish subjects had evinced in every quarter and by all ranks' (*Garnvillæ, Memoirs*). On 17 Sept. she was again at Windsor. In November the Duke of Wellington placed Walmer Castle at her disposal, and she and her family were there from 10 Nov. to 3 Dec.

With Peel the queen's relations steadily improved. On 6 April 1843 Peel described his own position thus: 'My relations with her majesty are most satisfactory. The queen has acted towards me not merely (as every one who knew her majesty's character must have anticipated) with perfect fidelity and honour, but with great kindness and consideration. There is every facility for the despatch of public business, a scrupulous and most punctual discharge of every public duty, and an exact understanding of the relation of a constitutional sovereign to her advisers' (*Peel Papers, ii. 544*). In January 1843 the queen was deeply concerned at the assassination of Peel's secretary, Edward Drummond, in mistake for himself, and she shrewdly denounced in private the verdict of insanity which the jury brought in against the assassin at his trial (*MARTIN, i. 27; Peel Papers, ii. 553*).

Among Peel's colleagues, Lord Aberdeen, minister of foreign affairs, came after Peel himself into closest personal relations with

the queen and the prince, and with him she found herself in hardly less complete accord. At the same time she never concealed her wish to bring the foreign office under the active influence of the crown. She bade Aberdeen observe 'the rule that all drafts not mere matters of course should be sent to her before the despatches had left the office.' Aberdeen guardedly replied that 'this should be done in all cases in which the exigencies of the situation did not require another course.' She prudently accepted the reservation, but Lord Aberdeen's general policy developed no principle from which the queen or the prince dissented, and the harmony of their relations was undisturbed (*WALPOLE, Life of Lord John Russell, ii. 51*).

Peel greatly strengthened his position by a full acknowledgment of Prince Albert's position. He permitted the prince to attend the audiences of ministers with the queen. He nominated him president of a royal commission to promote the fine arts of the United Kingdom in connection with the rebuilding of the houses of parliament, and he encouraged the prince to reform the confused administration of the royal palaces. The prince's authority consequently increased. From 1843 onwards the queen, in announcing her decision on public questions to her ministers, substituted for the singular personal pronoun 'I' the plural 'we,' and thus entirely identified her husband's judgment with her own. The growth of his authority was indicated in the spring of 1843 by his holding levees in the queen's behalf in her absence—an apparent assumption of power which was ill received.

Domestic incidents occupied much of the queen's attention, and compelled the occasional delegation of some of her duties. The death of the Duke of Sussex on 21 April 1843 precluded by four days the birth of a third child, the Princess Alice. In order to conciliate her unfriendly uncle, the king of Hanover, the queen asked him to be a sponsor, together with the queen's half-sister, Countess Endore, Prince Albert's brother, and Princess Sophia. With characteristic awkwardness the king of Hanover arrived too late for the christening (5 June). A large family gathering followed in July, when the queen's first cousin Augusta, elder daughter of the Duke of Cambridge, married at Buckingham Palace (28 July) Friedrich, hereditary grand duke of Mecklenburg-Schwerin. In August two of Louis Philippe's sons, the Prince de Joinville and the Duc d'Aumale, were the queen's guests.

The queen and Aberdeen.

Prince Albert's growing influence.

Domestic incidents.

A month later, after proroguing parliament in person (24 Aug.), and making a short yachting tour on the south coast, the queen carried out an intention that had long been present in her mind of paying a

visit to the king of the French, with whose family her own was by marriage so closely connected.

This was an event of much historic interest. In the first place it was the first occasion on which the queen had trodden foreign soil. In the second place it was the first occasion on which an English sovereign had visited a French sovereign since Henry VIII appeared on the Field of the Cloth of Gold at the invitation of Francis I in 1520. In the third place it was the first time for nearly a century that an English monarch had left his dominions, and the old procedure of nominating a regent or lord-justices in his absence was now first dropped. Although the expedition was the outcome of domestic sentiment rather than of political design, Peel and Aberdeen encouraged it in the belief that the maintenance of good personal relations between the English sovereign and her continental colleagues was a guarantee of peace and goodwill among the nations—a view which Lord Brougham also held strongly. Louis Philippe and his queen were staying at the Château d'En, a private domain near Tréport. The queen, accompanied by Lord Aberdeen, arrived there on 2 Sept. in her new yacht *Victoria* and Albert, which had been launched on 25 April, and of which Lord Adolphus FitzClarence, a natural son of William IV, had been appointed captain. Her host met the queen in his barge off the coast, and a magnificent reception was accorded her. The happy domestic life of the French royal family strongly impressed her. She greeted with enthusiasm, among the French king's guests, the French musician Auber, with whose works she was very well acquainted, and she was charmed by two *fêtes champêtres* and a military review. Lord Aberdeen and M. Guizot, Louis Philippe's minister, discussed political questions with the utmost cordiality, and although their conversations led later to misunderstanding, everything passed off at the moment most agreeably. The visit lasted five days, from 2 to 7 Sept., and the queen's spirit fell when it was over. On leaving Tréport the queen spent another four days with her children at Brighton, and paid her last visit to George IV's inconvenient Pavilion. But her foreign tour was not yet ended. From Brighton she sailed in her yacht to Ostend, to pay a long promised

visit to her uncle, the king of the Belgians, at the palace of Laken, near Brussels. 'It

was such a joy for me,' she wrote after parting with him, 'to be once again under the roof of one who has ever been a father to me.' Charlotte Brontë, who was in Brussels, saw her 'laughing and talking very gaily' when driving through the Rue Royale, and noticed how plainly and unpretentiously she was dressed (Haskell, *Life of Charlotte Brontë*, 1900, p. 270). Her vivacity brought unwonted sunshine to King Leopold's habitually sombre court. She reached Woolwich, on her return from Antwerp, on 21 Sept.

The concluding months of the year (1843) were agreeably spent in visits at home. In October she went by road to pay a first visit to Cambridge. She stayed, according to

prescriptive right, at the lodge of Trinity College, where she held a levee. Prince Albert received a

doctor's degree, and the undergraduates offered her a thoroughly enthusiastic reception. Next month she gave public proof of her regard for Peel by visiting him

at Drayton Manor (28 Nov. to 1 Dec.) Thence she passed to

Chatsworth, where, to her gratification, Melbourne and the Duke of Wellington were fellow-guests. The presence of Lord and Lady Palmerston was less congenial. At a great ball one evening her partners included Lord Morpeth and Lord Leveson (better known later as Earl Granville), who was afterwards to be one of her most trusted ministers. Another night there were a vast series of illuminations in the grounds, of which all traces were cleared away before the morning by two hundred men, working under the direction of the duke's gardener, (Sir) Joseph Paxton. The royal progress was continued to Belvoir Castle, the home of the Duke of Rutland, where she again met Peel and Wellington, and it was not till 7 Dec. that she returned to Windsor.

On 29 Jan. 1844 Prince Albert's father died, and in the spring he paid a visit to his native land (28 March–11 April). It was the first time the queen had been separated from her husband, and in his absence this king and queen of the Belgians came over to console her. On 1 June two other continental sovereigns arrived to pay her their respects, the king of Saxony and

the Tsar Nicholas I of Russia. To the tsar, who came uninvited at short notice, it was useful to

pay elaborate attentions. His half-brother (Alexander I) had been the queen's godfather,

Visit of Tsar
Nicholas I.

and political interests made the strengthening of the personal tie desirable. He attended a great review at Windsor Park with the queen, and went with her to Ascot and to the opera. At a grand concert given in his honour at Buckingham Palace, Joseph Joachim, then on a visit to England as a boy, was engaged to perform. A rough soldier in appearance and manner, the tsar treated his hostess with a courtesy which seemed to her pathetic, and, although pre-occupied by public affairs, civilly ignored all likelihood of a divergence of political interests between England and his own country.

At the time domestic politics were agitating the queen. The spread of disaffection in Ireland during the repeal agitation distressed her, and her mind was made more prominent in the controversy than was prudent. The Irish lord chancellor, Sir Edward Sugden, publicly asserted that the queen was personally determined to prevent repeal (May 1843). The repeal leader O'Connell, a warm admirer of the queen, promptly denied the statement. Peel mildly reprimanded Sugden, but truth forced him to admit that the queen 'would do all in her power to maintain the union as the band of connection between the two countries' (*Peel Papers*, iii. 52). The obstructive policy of the opposition in parliament at the same time caused her concern. She wrote to Peel on 15 Aug. of 'her indignation at the very unjustifiable manner in which the minority were obstructing the order of business; she hoped that every attempt would be made 'to put an end to what is really indecent conduct,' and that Sir Robert Peel would 'make no kind of concession to these gentlemen which could encourage them to go on in the same way' (*ib.* iii. 568). Worse followed in the month of the tsar's visit. On 11 June the government were defeated on a proposal to reduce the sugar duties. To the queen's consternation, Peel expressed an intention of resigning at once. Happily, four days later a vote of confidence was carried and the crisis passed. The queen wrote at once to express her relief (18 June). 'Last night,' she said, 'every one thought that the government would be beat, and therefore the surprise was the more unexpected and gratifying' (*ib.* iii. 153). Foreign affairs, too, despite the hospitalities of the English court to royal visitors, were threatening. The jealousy between the English and French peoples might be restrained, but could not be stifled, by the friendliness subsisting between the courts, and in the autumn of 1844 the maltreat-

ment by French officials of an English consul, George Pritchard, in the island of Tahiti, which the French had lately occupied, caused in England an explosion of popular wrath with France, which the queen and her government at one time feared must end in war.

Amid these excitements a second son, Prince Alfred, was born to the queen at Windsor on 6 Aug., and at the end of the month she entertained another royal personage from Germany, the prince of Prussia, brother of the king, and eventually first emperor of Germany. There sprang up between her and her new guest a warm friendship which lasted for more than forty years. A peaceful autumn holiday was again spent in Scotland, whither they proceeded by sea from Woolwich to Dundee. Thence they drove to Blair Athol to visit Lord and Lady Glenlyon, afterwards Duke and Duchess of Athol. Prince Albert engaged in deer-stalking, and the queen did much sketching. They thoroughly enjoyed 'the life of quiet and liberty,' and with regret disembarked at Woolwich on 3 Oct. to face anew official anxieties (*Journal*, pp. 29-42).

Five days later Louis Philippe returned the queen's visit, and thus for the first time a French monarch voluntarily landed on English shores. The visit. Tahiti quarrel had been composed, and the interchange of hospitable amenities was unclouded. On 9 Oct. the king was invested with the order of the Garter. On the 14th the visit ended, and the queen and Prince Albert accompanied their visitor to Portsmouth, though the stormy weather ultimately compelled him to proceed to Dover to take the short sea trip to Calais. Another elaborate ceremony at home attested the queen's popularity, which she liked to trace to public sympathy with her happy domestic life. She went in state to the city, 28 Oct., to open the new Royal Exchange. An elaborate coloured panoramic plate of the procession which was published at the time is now rare. Of her reception Peel wrote to Sir Henry Hardinge (6 Nov. 1841): 'As usual she had a fine day, and uninterrupted success. It was a glorious spectacle. But she saw a sight which few sovereigns have ever seen, and perhaps none may see again, a million human faces with a smile on each. She did not hear one discordant sound' (*Peel Papers*, iii. 264). On 12 Nov. the radical town of Northampton gave her a hardly less enthusiastic greeting when she passed through it on her way to visit the Marquis of Exeter at Burghley House. Other noble hosts

of the period included the Duke of Buckingham at Stowe (14-16 Jan. 1845), and the Duke of Wellington at Stratfieldsaye (20-22 Jan.)

When the queen read her speech at the opening of parliament, 4 Feb. 1845, she referred with great satisfaction to the visits of the Tsar Nicholas and the king of the French, and Peel took an early opportunity of pointing out that the munificent receptions accorded those sovereigns and other royal visitors were paid for by the queen out of her personal income without incurring any debt. The session was largely occupied with the affairs of Ireland and the proposal of the government to endow the catholic priests' training college at Maynooth. The queen encouraged Peel to press on with the measure, which she regarded as a tolerant concession to the dominant religion in Ireland. But it roused much protestant bigotry, which excited the queen's disdain. On 15 April 1845 she wrote to Peel: 'It is not honourable to protestantism to see this bad and violent and bigoted passions displayed at this moment.'

Another *bal costumé* at Buckingham Palace on 6 June, when the period chosen for illustration was the reign of George II, was the chief court entertainment of the year; and in the same month (21 June) there was a review of the fleet, which was assembled at Spithead in greater strength than was known before. Next month the queen received the king of the Netherlands at Osborne.

Again in the autumn the queen left England for a month's foreign travel, and Lord Aberdeen again bore the royal party company. The chief object of the journey was to visit Coburg and the scenes of Prince Albert's youth, but a subsidiary object was to pay on their outward road a return visit to the king of Prussia. Landing at Antwerp (6 Aug.), they were met at Malines by the king and queen of the Belgians, and at Aix-la-Chapelle by the king of Prussia; thence they journeyed through Cologne to the king of Prussia's palace at Brühl. They visited Bonn to attend the unveiling of the statue of Beethoven, and a great Beethoven festival concert, while at a concert at Brühl, which Meyerbeer conducted, the artists included Jenny Lind, Liszt, and Vieuxtemps. The regal entertainment was continued at the king's castle of Stolzenfels, near Coblenz on the Rhine, which they left on 16 Aug. The visit was not wholly without painful incident. The question of the prince's rank amid the great company caused

the queen annoyance. Archduke Frederick of Austria, who was also a guest, claimed and, to the queen's chagrin, was awarded precedence of the prince. The refusal of court officials to give her husband at Stolzenfels in 1845 the place of honour next herself led her to refuse for many years offers of hospitality from the Prussian court.

On 19 Aug. the queen finally reached the palace of Rosenau, Prince Albert's birthplace, and thence they passed through Coburg, finally making their way to Gotha. There the queen was gratified by a visit from her old governess Lehzen, and many pleasant excursions were made in the Thuringian forest. On 8 Sept. they left for Frankfort, stopping a night at Weimar on the way. They reached Antwerp on the 6th, but on their way to Osborne they paid a flying visit to Tréport. The state of the tide did not allow them to land from the yacht, and Louis Philippe's homely wit suggested a debarkation in bathing machines. Next day (9 Sept.) they settled once again at Osborne. Writing thence (14 Sept. 1845) to her aunt, the Duchess of Gloucester, she said: 'I am enchanted with Germany, and in particular with dear Coburg and Gotha, which I left with the very greatest regret. The realisation of this delightful visit, which I had wished for so many years, will be constant and lasting satisfaction to me.' To her uncle Leopold she wrote to the same effect.

Before the close of 1845 the queen was involved in the always dreaded anxiety of a ministerial crisis. The potato and the corn laws. The queen and the crop had completely failed in Ireland, and the harvest in England and Scotland was very bad. Great distress was certain throughout the United Kingdom during the winter. Thereupon Peel made up his mind that the situation demanded the repeal of the corn laws—a step which he and his party were pledged to oppose. His colleagues were startled by his change of view, many threatened resistance, but all except Lord Stanley ultimately agreed to stand by him. The rank and file of the party showed fewer signs of complacency. The queen was gravely disturbed, but straightway threw the whole weight of her influence into the prime minister's scale. On 28 Nov. 1845, after expressing her sorrow at the differences of opinion in the cabinet, she wrote without hesitation: 'The queen thinks the time is come when a removal of the restrictions on the importation of food cannot be successfully resisted. Should this be Sir Robert's own opinion, the queen very much hopes that none of his

colleagues will prevent him from doing what it is right to do' (*Peel Papers*, iii. 237-8).

But Peel, although greatly heartened by the queen's support, deemed it just both to his supporters and to his opponents to let the opposite party, which had lately advocated the reform, carry it out. On 5 Dec. 1845 he resigned. The queen was as loth to part with him as she had formerly been to part with Melbourne, but prepared herself to exercise, according to her wont, all the influence that was possible to her in the formation of a new government. By Peel's desire she sent for Lord John Russell, who was at the moment at Edinburgh, and did not reach Windsor till the 11th. In the meantime she asked Melbourne to come and give her counsel, but his health was failing, and on every ground prudence urged him to refuse interference. The queen's chief fear of a whig cabinet was due to her and her foreign kinsmen's distrust of Palmerston as foreign minister. No whig ministry could exclude him, but she promptly requested Lord John to give him the colonial office. Lord John demurred, and

Negotiations with Lord John Russell further. In the extremity of her fear she begged Lord Aberdeen to support her objections to Palmerston; but since it was notorious in political circles that Palmerston would accept no post but that of foreign secretary, Aberdeen could give her little comfort. He merely advised her to impress Palmerston with her desire of peace with France, and to bid him consult her regularly on matters of foreign policy. On 18 Dec. the queen had a second interview at Windsor with Lord John, who was now accompanied by the veteran whig leader, Lord Lansdowne. Prince Albert sat beside her, and she let her visitors understand that she spoke for him as well as for herself. Lord John asked her to obtain assurances from Peel that the dissentient members of his cabinet were not in a position to form a new government, and to secure for him, if he undertook to repeal the corn laws, the full support of Peel and his followers. Peel gave her a guarded answer, which dissatisfied Lord John, who urged her to obtain more specific promise of co-operation. The queen, although she deemed the request unreasonable, politely appealed anew to Peel without result. At length, on 18 Dec., Lord John accepted her command to form a government. But his difficulties were only begun. There were members of his party who distrusted Palmerston as thoroughly as the queen. Lord Grey declined to join the government if Palmerston took the foreign

office, and demanded a place in the cabinet for Cobden. Lord John felt unable either to accept Lord Grey's proposal or to forego his presence in the administration; and greatly to the queen's surprise he, on 29 Dec., suddenly informed her that he was unable to serve her. For a moment it looked as if she were to be left without any government, but she turned once more to Peel, who, at her earnest request, resumed power. To this result she had passively contributed throughout the intricate negotiation, and it was completely satisfactory to her. The next day, 30 Dec., she wrote: 'The queen cannot sufficiently express how much we feel Sir Robert Peel's high-minded conduct, courage, and loyalty, which can only add to the queen's confidence in him.'

Thenceforth the queen identified herself almost recklessly with Peel's policy of repeal. Melbourne, when dining at Windsor, told her that Peel's conduct was 'damned dishonest,' but she declined to discuss the topic. She lost no opportunity of urging Peel to persevere. On 12 Jan. 1846 she wrote of her satisfaction at learning of the drastic character of his proposed measures, 'feeling certain,' she added, 'that what was so just and wise must succeed.'

On 27 Jan. Prince Albert attended the House of Commons to hear Peel announce his plan of abolishing the corn laws in the course of three years. Strong objection was raised to the prince's presence by protectionists, who argued that it showed partisanship on the part of the crown. The queen ridiculed the protest, but the prince never went to the lower house again. On 4 Feb. she told Peel that he would be rewarded with the gratitude of the country, which 'would make up for the abuse he has to endure from so many of his party.' She expressed sympathy with him in his loss of the support of Gladstone and Lord Lincoln, who had accepted his policy, but had withdrawn from the House of Commons because, as parliamentary nominees of the Duke of Newcastle, who was a staunch protectionist, they could not honourably vote against his opinions. The queen pressed Peel to secure other seats for them. On 18 Feb. she not only wrote to congratulate Peel on his speech in introducing the bill, but forwarded to him a letter from the Dowager Queen Adelaide which expressed an equally flattering opinion. Every speech during the corn-law debates she read with minute attention, and she closely studied the division lists.

The birth of the Princess Helena on 25 May was not suffered to distract the royal atten-

tion, and the queen watched with delight the safe passage of the bill through both houses of parliament. The sequel, however, disconcerted her. On 28 June, the night that the corn-law bill passed its third reading in the Lords, the protectionists and whigs voted together against the government on the second reading of a coercion bill for Ireland, and Peel was defeated by seventy-three. His resignation followed of necessity, and, at a moment when his services seemed most valuable to her, the queen saw herself deprived of them, as it proved for ever. She wrote of 'her deep concern' at parting with him. 'In whatever position Sir Robert Peel may be,' she concluded, 'we shall ever look on him as a kind and true friend.' Hardly less did she regret the retirement of Lord Aberdeen. 'We felt so ease with them,' she wrote of the two men to her uncle Leopold, who agreed that Peel, almost alone among contemporary English statesmen, could be trusted 'never to let monarchy be robbed of the little strength and power it still may possess' (*Peel Papers*, iii. 172).

At the queen's request Lord John Russell formed a new government, and with misgivings the queen agreed to Palmerston's return to the foreign office. The ministry lasted nearly five years. Lord John, although awkward and unattractive in manner, and wedded to a narrow view of the queen's constitutional powers, did much to conciliate the royal favour. Closer acquaintance improved his relations with the queen, and she marked the increase of cordiality by giving him for life Pembroke Lodge in Richmond Park in March 1847, on the death of the Earl of Erroll, husband of a natural daughter of William IV. Some of Lord John's colleagues greatly interested the queen. Lord Clarendon, who was at first president of the board of trade, and in 1847 lord-lieutenant of Ireland, gained her entire confidence and became an intimate friend. She liked, too, Sir George Grey, the home secretary, and she admired the conversation of Macaulay, the paymaster-general, after he had overcome a feeling of shyness in meeting her. On 9 March 1860, when Macaulay dined at Buckingham Palace, he talked freely of his 'History.' The queen owned that she had nothing to say for her poor ancestor, James II. 'Not your majesty's ancestor, your majesty's predecessor,' Macaulay returned; and the remark, which was intended as a compliment, was well received.

Macaulay
at court.

(*TREVELYAN'S Life of Macaulay*, pp. 537-8). On 14 Jan. 1861, when he stayed at Windsor, he 'made her laugh

heartily,' he said. 'She talked on for some time most courteously and pleasantly. Nothing could be more sensible than her remarks on German affairs' (*ibid.* p. 540). But, on the whole, the queen's relations with her third ministry were less amicable than with her first or second, owing to the unaccommodating temper of the most prominent member of it—Palmerston, the foreign secretary. Between him and the crown a constant struggle was in progress for the effective supervision of foreign affairs. The constitution did not define the distribution of control between monarch and minister over that or any other department of the state. The minister had it in his power to work quite independently of the crown, and it practically lay with him to admit or reject a claim on the crown's part to suggest even points of procedure, still less points of policy. For the crown to challenge the fact in dealing with a strong-willed and popular minister was to invite, as the queen and prince were to find, a tormenting sense of impotence.

At the outset monarch and minister found themselves in agreement. Although Palmerston realised anticipations by em-
The Spanish marriage, broiling France and England, the breach was deemed, in the peculiar circumstances, inevitable even by the queen and the prince. A difference had for some years existed between the two countries in regard to the affairs of Spain. The Spanish throne was occupied by a child of sixteen (Queen Isabella), whose position sufficiently resembled that of the queen of England at her accession to excite at the English court interest in her future. It was the known ambition of Louis Philippe or of his ministers to bring the Spanish kingdom under French sway. English politicians or all parties were agreed, however, that an extension of French influence in the Spanish peninsula was undesirable. Perfectly conscious of the strength with which this view was held, Louis Philippe prudently announced in 1843 that his younger son, the Duc de Montpensier, was to be affianced, not to the little Spanish queen herself, but to her younger sister. Lord Aberdeen saw no objection to such a match provided that the marriage should be delayed till the Spanish queen had herself both married and had issue, and that no member of the French Bourbon house should become the royal consort of Spain. During each of the visits of Queen Victoria to the Château d'Eu the king of the French gave her a distinct verbal assent to these conditions. The Spanish queen had many suitors, but she was slow

in making a choice, and her hesitation kept the Spanish question open.

Unluckily for the good relations of France and England, the personal position of Prince Albert in England and his relations with Germany introduced a curious complication into the process of selecting a consort for the Spanish queen. Christina, the mother of the Spanish queen, had no wish to facilitate

Leopold of
Saxe-
Coburg.

French ambition. With a view to foiling it she urged her daughter to follow the example alike of the English queen and of the queen of Portugal, and marry into the Saxe-Coburg family. In

1841, when the notion was first put forward, Prince Albert's elder brother Ernest, who was as yet unmarried, was suggested as a desirable suitor; but on his marriage to another in 1842, Queen Christina designated for her son-in-law Ernest and Albert's first cousin, Prince Leopold, whose brother was already prince consort of Portugal. Prince Albert, who had entertained the young man at Windsor, was consulted. He felt that his cousin should not be lightly deprived of the opportunity of securing a throne, but recognised a delicacy in urging English statesmen to serve Saxe-Coburg interests. France showed at once passionate hostility to the scheme, and at the instance of Guizot, who brusquely declared that he would at all hazards preserve Spain from England's and Portugal's fate of a Saxe-Coburg ruler, the Saxe-Coburg suit was before 1844 avowedly dropped by consent. On 2 May 1846 it was covertly revived by Queen Christina. That lady wrote to Duke Ernest of Saxe-Coburg, who was on a visit to his relatives in Portugal, bidding him seek the personal aid of Queen Victoria in marrying her daughter to Prince Leopold. With the embarrassing ignorance which prevailed in continental courts of English constitutional usages, Queen Christina desired her letter to reach Queen Victoria's hand alone, and not that of any of her ministers. Duke Ernest forwarded it to King Leopold, who communicated it to his niece. Both Duke Ernest and King Leopold came to England in August, and they discussed the Saxe-Coburg aspect of the question with the queen and Prince Albert. Reluctantly a decision adverse to the Saxe-Coburg prince was reached, on the ground that both English and French ministers had virtually rejected him. Duke Ernest at once wrote to that effect to the Queen-mother Christina, and advised the young queen to marry a Spanish prince (DUKE ERNEST OF SAXE-COBURG, *Memoirs*, i. 190 seq.) At the same moment Palmerston returned to the

foreign office, and in a despatch to the Spanish government which he wrote in haste and with half knowledge of the result of the recent Saxe-Coburg conclave, he pressed the Spanish queen to choose without delay one of three suitors, among whom he included Prince Leopold. The despatch was communicated to the French ministers, who saw in Palmerston's resuscitation of the Saxe-Coburg offer of marriage a special grievance against the English court. Retaliation was at once attempted. Without seeking further negotiations, the French ministers arranged at Madrid that the young queen should marry at once, that the bridegroom should be a Spanish suitor, the Duke of Cadiz, and that on the same day the Duc de Montpensier should marry her younger sister. On 8 Sept. the queen of the French, in a private letter to Queen Victoria, announced the approaching marriage of her son, Montpensier. The queen, in reply (10 Sept.), expressed surprise and regret. Louis Philippe sent an apologetic explanation to his daughter, the queen of the Belgians, who forwarded it to Queen Victoria. She replied that Louis Philippe had broken his word.

Bitter charges of breach of faith abounded on both sides, and the war of vituperation involved not merely both countries but both courts. The sinister rumour ran in England that the French ministers knew the Duke of Cadiz to be unfit for matrimony, and had selected him as husband of the Spanish queen so that the succession to the Spanish crown might be secured to the offspring of Montpensier. In any case, that hope was thwarted; for although the marriage of the Spanish queen Isabella proved unhappy, she was mother of five children, who were ostensibly born in wedlock. The indignation of the queen and Prince Albert was intensified by the contempt which was showered in France on the Saxe-Coburg family, and the efforts of Louis Philippe and his family at a domestic reconciliation proved vain.

Palmerston, after his wont, conducted the official negotiation without any endeavour to respect the views of the queen or Prince Albert. In one despatch to Sir Henry Bulwer, the English minister at Madrid, he reiterated, to the queen's annoyance, a paragraph which Prince Albert had deleted in the first draft touching the relation of the issue of the Duc de Montpensier to the Spanish succession. King Leopold held Palmerston responsible for the whole imbroglio (DUKE ERNEST, i. 199). But the queen's public and private sentiments were in this case identical with those of Palmerston and of th

indignation.

English public, and, in the absence of any genuine difference of opinion, the minister's independent action won from the queen reluctant acquiescence. The English government formally protested against the two Spanish marriages, but they duly took place on 10 Oct., despite English execrations. 'There is but one voice here on the subject,' the queen wrote (18 Oct.) to King Leopold, 'and I am, alas! unable to say a word in defence of one [i.e. Louis Philippe] whom I had esteemed and respected. You may imagine what the whole of this makes me suffer. . . . You cannot represent too strongly to the king and queen [of the French] my indignation, and my sorrow, at what has been done' (MARTIN). Then the hubbub, which seemed to threaten war, gradually subsided. The effect of the incident on English prestige proved small, but it cost Louis Philippe the moral support of England, and his tottering throne fell an easy prey to revolution.

At the opening of 1847 the political horizon was clouded on every side, but despite the political anxieties at home—threats of civil war in Ireland, and so great a rise in the price of wheat in England that the queen diminished the supply of bread to her own household—the 'season' of that year was exceptionally lively. Numerous foreign visitors were entertained, including the Grand Duke Constantine of Russia, the Tsar Nicholas's son, Prince Oscar of Sweden, and many German princes. On 15 June a state visit was paid to Her Majesty's Theatre in the Haymarket, during the first season of Jenny Lind, who appeared as Norma in Ballo's opera. The queen applauded eagerly (HOLLAND and ROCKSTRO, *Jenny Lind*, ii. 118 seq.), and wrote to her uncle Leopold: 'Jenny Lind is quite a remarkable phenomenon.' In the spring the queen had been much gratified by the election of Prince Albert as chancellor of Cambridge University. The choice was not made without a contest—the 'unseemly contest' the queen called it—and the prince won by a majority of only 117 votes over those cast for his opponent, the Earl of Powis. But the queen wisely concentrated her attention on the result, which she felt to be no great thing, a gift of hers, but an honour that the prince had earned independently. In July she accompanied him to the Cambridge commencement, over which he presided as chancellor. From Tottenham she travelled on the Eastern Counties railway, under the personal guidance of the railway king, George Hudson. On 5 July 1847 she received from her husband in his

official capacity, in the hall of Trinity College, an address of welcome. In reply she congratulated the university on their wise selection of a chancellor (*Life of Wilberforce*, i. 398; DEAN MERIVALE, *Letters*; COOPER, *Annals of Cambridge*). Melbourne and three German princes, who were royal guests—Prince Waldemar of Prussia, Prince Peter of Oldenburg, and the hereditary Grand Duke of Saxe-Weimar—received honorary degrees from Prince Albert's hands. An installation ode was written by Wordsworth and set to music by T. A. Walmisley. On the evening of the 6th there was a levee at the lodge of Trinity College, and next morning the queen attended a public breakfast in Nevill's Court.

For the third time the queen spent her autumn holiday in Scotland, where she had taken a highland residence at Ardvenkie, a lodge on Loch Laggan, in the occupation of the Marquis of Abercorn. They travelled thither by the west coast from the Isle of Wight in the yacht Victoria and Albert (11–14 Aug.) Spending at the outset a night on the Scilly Isles, they made for the Third visit to Scotland, 1847. Menai Straits, where they transferred themselves to the yacht Fairy. Passing up the Clyde they visited Loch Fyne. On the 18th they arrived at Inveraray Castle, and afterwards reached their destination by way of Fort William. Palmerston was for the most part the minister in attendance, and, amid the decistalking, walks, and drives, there was much political discussion between him and Prince Albert. The sojourn lasted three weeks, till 17 Sept., and on the return journey the royal party went by sea only as far as Fleetwood, proceeding by rail from Liverpool to London (*Journal*, pp. 48–61).

Meanwhile a general election had taken place in August without involving any change of ministry. In the new parliament, which was opened by commission on 18 Nov. 1847, the liberals obtained a working majority numbering 325 to 226 protectionists and 106 conservative free traders or Peelites. Public affairs, especially abroad, abounded in causes of alarm for the queen. 1848, the Louis Philippe's year of revolution in Europe, passed off without serious disturbance in England, but the queen's equanimity was rudely shaken by rebellions in foreign lands. The dethronement of Louis Philippe in February shocked her. Ignoring recent political differences, she thought only of his distress. When his sons and daughters hurried to England, nothing for a time was known of the fate of Louis and his queen. On

ment.

2 March they arrived in disguise at New-haven, and Louis immediately wrote to the queen, throwing himself on her protection. She obtained her uncle Leopold's consent to offer them his own royal residence at Claremont. There Prince Albert at once visited them. To all members of the French royal family the queen showed henceforth unremitting attention. To the Duc de Nemours she allotted another royal residence at Bushey. She frequently entertained him and his brothers, and always treated them with the respect which was due to members of reigning families. But it was not only in France that the revolution dealt havoc in the queen's circle of acquaintances. Her half-brother of Loiningen, who had been in Scotland with her the year before, her half-sister, the Duke of Saxo-Coburg-Gotha (Prince Albert's brother), and their friend, the king of Prussia, suffered severely in the revolutionary movements of Germany. In Italy and Austria, too, kings and princes were similarly menaced. Happily, in England, threats of revolution came to nothing. The great chartist meeting on Kennington Common, on 10 April, proved abortive. By the advice of ministers the queen and her family removed to Osborne a few days before, but they returned on 2 May. During the crisis the queen was temporarily disabled by the birth, on 18 March, of the Princess Louise; but throughout her confinement, she wrote to her uncle, King Leopold, 'My only thoughts and talk were politics, and I never was calmer or quieter or more earnest. Great events make me calm; it is only trifles that irritate my nerves' (4 April). When the infant Princess Louise was christened at Buckingham Palace on the 13th, the queen of the Belgians stood godmother, and the strain of anxiety was greatly lessened. A new perplexity arose in June 1848, when Lord John feared defeat in the House of Commons on the old question of the sugar duties, which had already nearly wrecked two governments. The queen, although her confidence in the ministry was shaken by Palmerston's conduct of the foreign office, declared any change inopportune, and she approached with reluctance the consideration of the choice of Lord John's successor. Demurring to Lord John's own suggestion of Lord Stanley, who as a seceder from Peel was not congenial to her, she took counsel with Melbourne, who advised her to summon Peel. But the government proved stronger than was anticipated, and for three years more Lord John continued in office. On 5 Sept. 1848 the queen prorogued parliament in person, the ceremony taking

place for the first time in the Peers' Chamber in the new houses of parliament, which had been rebuilt after the fire of 1834. Her French kinsmen, the Duc de Nemours and the Prince de Joinville, were present with her. Popular enthusiasm ran high, and she was in thorough accord with the congratulatory words which her ministers put into her mouth on the steadfastness with which the bulk of her people had resisted incitements to disorder.

On the same afternoon she embarked at Woolwich for Aberdeen in order to spend ^{first stay} three weeks at Balmoral House, ^{at Balmoral,} then little more than a shooting ^{1848.} lodge, which she now hired for the first time of Lord Aberdeen's brother, Sir Robert Gordon. Owing to bad weather the queen tried the new experiment of making practically the whole of the return journey to London by rail, travelling from Perth by way of Urewo. Thenceforth she travelled to and from Scotland in no other way. Later in the year a distressing accident caused the queen deep depression (9 Oct.) While she was crossing from Osborne to Portsmouth, her yacht, the Fairy, ran down a boat belonging to the Grampus frigate, and three women were drowned. 'It is a terrible thing, and haunts me continually,' the queen wrote.

Every year the queen, when in London or at Windsor, sought recreation more and more conspicuously in music and ^{music and the drama} the drama. Elaborate concerts, ^{at court.} oratorios, or musical recitations were repeatedly given both at Windsor and at Buckingham Palace. On 10 Feb. 1846 Charles Kemble read the words of the 'Antigone' when Mendelssohn's music was rendered, and there followed like renderings of 'Athalia' (1 Jan. 1847), again of 'Antigone' (1 Jan. 1848), and of 'Oedipus at Colonus' (10 Feb. 1848 and 1 Jan. 1852). During 1812 and 1844 the composer Mendelssohn was many times at court. The great French actress Rachel was invited to recite on more than one occasion, and on 26 Feb. 1851, when Macready took farewell of the stage at Drury Lane, the queen was present. Meanwhile, to give greater brilliancy to the Christmas festivities, the queen organised at the end of 1848 dramatic performances at Windsor. Charles Kean was appointed director, and until Prince Albert's death, except during three years—in 1850 owing to the queen dowager's death, in 1855 during the gloom of the Crimean war, and in 1858 owing to the distraction of the princess royal's marriage—dramatic repre-

representations were repeated in the Rubens room at the castle during each Christmas season. On 28 Dec. 1848, at the first performance, 'The Merchant of Venice' was presented, with Mr. and Mrs. Kean and Mr. and Mrs. Keeley in the cast. Thirteen other plays of Shakespeare and nineteen lighter pieces followed in the course of the next thirteen years, and the actors included Macready, Phelps, Charles Mathews, Ben Webster, and Buckstone. In 1857 William Bodham Donne succeeded Kean as director; and the last performance under Donne's management took place on 31 Jan. 1861. More than thirty years then elapsed before the queen suffered another professional dramatic entertainment to take place in a royal palace. The most conspicuous encouragement which the queen and her husband bestowed on art during this period was their commission to eight artists (Eastlake, MacIise, Landseer, Dyce, Stauffield, Uwins, Leslie, and Ross) to decorate with frescoes the queen's summer house in the gardens of Buckingham Palace. The subjects were drawn from Milton's 'Comus.' The work was completed in 1845.

Under Prince Albert's guidance, the queen's domestic life was now very systematically ordered. The education of the growing family occupied their parents' minds almost from the children's birth. Prince Albert frequently took counsel on the subject with Stockmar and Bunsen, and the queen consulted Melbourne (24 March 1842) even after he had ceased to be her minister. In the result Lady Lyttelton, widow of the third Baron Lyttelton, and sister of the second Earl Spencer (Lord Althorp), who had been a lady-in-waiting since 1837, was in 1842 appointed governess of the royal children, and, on her retirement in January 1851, she was succeeded by Lady Caroline Barrington, widow of Captain the Hon. George Barrington, R.N., and daughter of the second Earl Grey; she held the office till her death on 28 April 1875. The office of royal governess, which thus was filled during the queen's reign by only two holders, carried with it complete control of the 'nursery establishment,' which soon included German and French as well as English attendants. All the children spoke German fluently from infancy. The queen sensibly insisted that they should be brought up as simply, naturally, and domestically as possible, and that no obsequious deference should be paid to their rank. The need of cultivating perfect trust between parents and children, the value of a thorough but liberal religious training from

childhood, and the folly of child-worship or excessive laudation were constantly in her mind. She spent with her children all the time that her public engagements permitted, and delighted in teaching them youthful amusements. As they grew older she and the prince encouraged them to recite poetry and to act little plays, or arrange tableaux vivants. To the education of the prince of Wales as the heir apparent they naturally devoted special attention, and in every way they protected his interests. Very soon after his birth the queen appointed a commission to receive and accumulate the revenues of the Duchy of Cornwall, the appanage of the heir apparent, in their son's behalf, until he should come of age, and the estate was administered admirably. Although the queen abhorred advanced views on the position of women in social life, she sought to make her daughters as useful as her sons to the world at large, and, while causing them to be instructed in all domestic arts, repudiated the notion that marriage was the only object which they should be brought up to attain (*Letters to Princess Alice* (1874), p. 320). She expressed regret that among the upper classes in England girls were taught to aim at little else in life than matrimony.

The queen and Prince Albert regulated with care their own habits and pursuits. Although public business compelled them to spend much time in London, the prince rapidly acquired a distaste for it, which he soon communicated to the queen. As a young woman she was, she said, wretched to leave London, but, though she never despised or disliked London amusements, she came to adopt her husband's view, that peace and quiet were most readily to be secured at a distance from the capital. The sentiment grew, and she reached the conclusion that 'the extreme weight and thickness of the atmosphere' injured her health, and in consequence her sojourns at Buckingham Palace became less frequent and briefer; in later life she did not visit it more than twice or thrice a year, staying on each occasion not more than two days. Windsor, which was agreeable to her, was near enough to London to enable her to transact business there without inconvenience. In early married life she chiefly resided there. The Pavilion at Brighton she abandoned, and, after being dismantled in 1846, it was sold to the corporation of Brighton in 1860 to form a place of public assembly. Anxious to secure residences which should be personal property and free from the restraints of supervision by public officials, she soon decided to acquire private

abodes in those parts of her dominions which were peculiarly congenial to her—the Isle of Wight and the highlands of Scotland. Her residence in the south was secured first. Late in 1844 she purchased of Lady Isabella Blackford the estate of Osborne, consisting of about eight hundred acres, near East Cowes. Subsequent purchases increased the land to about two thousand acres. The existing house proved inconvenient, and the foundation-stone of a new one was laid on 23 June 1845. A portion of it was occupied in September 1846, although the whole was not completed until 1851. In the grounds was set up in 1851 a Swiss cottage as a workshop and playhouse for the children. In the designing of the new Osborne House and in laying out the gardens Prince Albert took a very active part. The queen interested herself in the neighbourhood, and rebuilt the parish church at Whippingham. In 1818 the queen leased of the life trustees Balmoral House, as her residence in the highlands; she purchased it in 1852, and then resolved to replace it by an elaborate edifice. The

and Balmoral.

new Balmoral Castle was completed in the autumn of 1854, and large additions were subsequently made to the estate. The Duchess of Kent resided in the neighbourhood Aberfeldie Castle, which was subsequently occupied by the prince of Wales. At Balmoral, after 1854, a part of every spring and autumn was spent during the rest of the queen's life, while three or four annual visits were paid regularly to Osborne. At both Osborne and Balmoral very homely modes of life were adopted, and, at Balmoral especially, ministers and foreign friends were surprised at the simplicity which characterised the queen's domestic arrangements. Before the larger house was built only two sitting-rooms were occupied by the royal family. Of an evening lulliards were played in the one, under such cramped conditions that the queen, who usually looked on, had constantly to move her seat to give the players elbow-space. In the other room the queen at times would take lessons in the Scotch reel. The minister in attendance did all his work in his small bedroom, and the queen would run carelessly in and out of the house all day long, walking alone, visiting neighbouring cottages, and chatting unreservedly with their occupants.

After identifying herself thus closely with Scotland, it was only right for her to make the acquaintance of Ireland, the only portion of the United Kingdom which she had not visited during the first decade of her reign. Peel had entertained a suggestion that the queen should visit the country in 1841,

when she received an invitation from the lord mayor of Dublin, and a conditional promise of future acceptance was given. In the early autumn of 1849 the plan was carried out with good results. The social and political condition of the country was not promising. The effects of the famine were still acute. Civil war had broken out in 1818, and, although it was easily repressed, disaffection was widespread. In June 1849 the queen's attention was disagreeably drawn to the unsatisfactory condition of the country by a dilemma which arose in regard to recent convictions for high treason; commutation of capital sentences was resolved upon, but it was found to be impossible to substitute terms of imprisonment until a new statute had been hastily devised, giving the crown specific authority to that effect.

The general distress precluded a state visit. But personal loyalty to the sovereign was still believed to prevail in Ireland. The queen went by sea from Cowes to the Cove of Cork, upon which she bestowed the new name of Queenstown in honour of her first landing there on Irish soil. She thence proceeded in her yacht to Kingsdown, and took up her residence for four days at the viceregal lodge in Phoenix Park, Dublin. She held a levee one evening in Dublin Castle. Her reception was all that could be wished. It was 'idolatrous,' wrote Monckton Milnes, lord Houghton, 'and utterly unworthy of a free, not to say ill-used, nation' (*Rem., Lord Houghton*, i. 485-6). She received addresses and visited public institutions. Everything she saw delighted her, and she commemorated her presence in Dublin by making the prince of Wales Earl of Dublin (10 Sept. 1849). From the Irish capital she went by sea to Belfast, where her reception was equally enthusiastic. Thence she crossed to the Scottish coast, and after a public visit to Glasgow she sought the grateful seclusion of Balmoral.

On 30 Oct. 1849 an attack of chicken-pox prevented the queen from fulfilling her promise to open the new coal exchange in Lower Thames Street, and she was represented by her husband. In two ways the incident proved of interest. The queen's two eldest children there first appeared at a public ceremonial, while the royal barge, which bore the royal party from Westminster to St. Paul's wharf, made its last state journey on the Thames during the queen's reign.

In the large circle of the queen's family and court, it was inevitable that death

Last royal water journey, 1849.

should be often busy and should gradually sever valued links with the queen's youth.

Her aunt, Princess Sophia, died on 27 May 1848, and her old minister and mentor, Melbourne, on 24 Nov. 1848, while a year later George Anson, the prince's former secretary and now keeper of his privy purse, passed suddenly away, and his loss was severely felt by the queen. Another grief was the death, on 3 Dec. 1849 at Stanmore Priory, of the old Queen Adelaide, who was buried in St. George's Chapel, Windsor, beside William IV on 13 Dec. The summer of the following year (1850) was still more fruitful in episodes of mourning. On 3 July Peel succumbed to an accidental fall from his horse; in him the queen said she lost not merely a friend, but a father. Five days later there died her uncle, the Duke of Cambridge; on 26 Aug., Louis Philippe, whose fate of exile roused the queen's abiding sympathy; and on 10 Oct. the French king's gentle daughter, the queen of the Belgians, wife of King Leopold. Minor anxieties were caused the queen by two brutal attacks upon her person: on 19 May 1849, when she was returning from a drive near Constitution Hill, a blank charge was fired at her from a pistol by an Irishman, William Hamilton of Adare, and on 27 May 1850 one Robert Pate, a retired officer, hit her on the head with a cane as she was leaving Cambridge House in Piccadilly, where the Duke of Cambridge was lying ill.

The last outrage was the more brutal, seeing that the queen was just recovering from her confinement. Her third son, Arthur, was born on 1 May 1850. The date was the Duke of Wellington's eighty-first birthday.

A few weeks before the duke had delighted the queen by the injudicious suggestion that Prince Albert should become commander-in-chief of the army in succession to himself. The prince wisely declined the honour. Apart from other considerations his hands were over full already and his health was giving evidence of undue mental strain. But, by way of showing her appreciation of the duke's proposal, the queen made him godfather to her new-born son. A second sponsor was the prince of Prussia, and the christening took place on 22 June. The infant's third name, Patrick, commemorated the queen's recent Irish visit. At the time, despite family and political cares, the queen's health was exceptionally robust. On going north in the autumn, after inaugurating the high-level bridge at Newcastle and the Royal Border Bridge on the Scottish

boundary at Berwick, she stopped two days in Edinburgh at Holyrood Palace, in order to climb Arthur's Seat. When she settled down to her holiday at Balmoral, she took energetic walking exercise and showed a physical briskness enabling her to face boldly annoyances in official life, which were now graver than any she had yet experienced.

The breach between the foreign minister (Palmerston) and the crown was growing wider each year. Foreign affairs interested the queen and her husband intensely. As they grew more complex the prince studied them more closely, and prepared memoranda with a view to counselling the foreign minister. But Palmerston rendered such efforts abortive by going his own way, without consulting the court or, at times, even his colleagues. The antagonism between Prince Albert's views, with which the queen identified herself, and those of Palmerston was largely based on principle. Palmerston con-

sistently supported liberal movements abroad, even at the risk of exposing himself to the charge of encouraging revolution. Although the queen and the prince fully recognised the value of constitutional methods of government in England, and were by no means averse to their spread on the continent of Europe, their personal relations with foreign dynasties evoked strong sympathy with reigning monarchs and an active dread of revolution, which Palmerston seemed to them to view with a perilous complaisance.

Through 1848, the year of revolution, the difference steadily grew. Palmerston treated with equanimity the revolutionary riots at Berlin, Vienna, and Baden in 1848-9, while they stirred in his royal mistress a poignant compassion for those crowned kinsmen or acquaintances whose lives and fortunes were menaced. When efforts were first made in Italy to secure national unity and to throw off the yoke of Austria, Palmerston spoke with benevolence of the endeavours of the Italian patriots. Although the prince strongly deprecated the cruelties which Italian rulers practised on their subjects, he and the queen cherished a warm sympathy with the Austrians and their emperor. In regard to Germany, on the other hand, the opposition between royal and ministerial opinions involved other considerations. The prince was well affected to the movement for national unity under Prussia's leadership. Palmerston's distrust of the weak reactionary Prussian king and his allies among the German princes rendered him suspicious of German nationalist aspirations. In the intricate struggle for the possession of the duchies

of Schleswig-Holstein, which opened in 1848, Palmerston inclined to the claim of Denmark against that of the confederation of German states with Prussia at its head, whose triumph the English royal family hopefully anticipated.

In point of practice Palmerston was equally offensive to the prince and the queen. He frequently caused them intense irritation or alarm by involving the government in acute international crises without warning the queen of their approach. In 1848, before consulting her, he peremptorily ordered the reactionary Spanish government to liberalise its institutions, with the result that the English ambassador, Sir Henry Bulwer, was promptly expelled from Madrid. In January 1850, to the queen's consternation, Palmerston coerced Greece into compliance with English demands for the compensation of Don Pacifico and other English subjects who had claims against the Greek government. Thereupon France, who was trying to mediate, and regarded Palmerston's precipitate action as insulting, withdrew her ambassador from London, and for the third time in the queen's reign—on this occasion almost before she had an opportunity of learning the cause—Palmerston brought France and England to the brink of war.

The queen's embarrassments were aggravated by the habit of foreign sovereigns, who believed her power to be far greater than it was, of writing autograph ap-
The queen's private correspondence.
 pitals to her personally on political affairs, and of seeking privately to influence the foreign policy of the country. She was wise enough to avoid the snares that were thus laid for her, and frankly consulted Palmerston before replying. He invariably derided the notion of conciliating the good opinion of foreign courts, where his name was a word of nothing. The experience was often mortifying for the queen. In 1847, when the queen of Portugal, the queen's early playmate, was threatened by her revolutionary subjects, she appealed directly to Queen Victoria for protection. Palmerston treated the Portuguese difficulty as a 'Coburg family affair.' He attributed the queen's peril to her reliance on the absolutist advice of one Dietz, a native of Coburg, who stood towards the Portuguese queen and her husband, Prince Ferdinand of Saxe-Coburg, in a relation resembling that of Stoclmair to Prince Albert and the queen. Palmerston insisted on Dietz's dismissal—a proceeding that was highly offensive to the queen and to her Saxe-Coburg kinsmen (Duke Ernest, *Memoirs*, i, 288 sq.) Afterwards he dictated a

solemn letter of constitutional advice for his royal mistress to copy in her own hand and forward to her unhappy correspondent at Lisbon (WALFOLD, *Lord John Russell*). Later in the year the king of Prussia, in a private letter which his ambassador at St. James's, Baron Bunsen, was directed to deliver to the queen in private audience, invited her encouragement of the feeble efforts of Prussia to dominate the German federation. Palmerston learned from Bunsen of the missive, and told him that it was irregular for the English sovereign to correspond with foreign monarchs unless they were her relatives (BUNSEN, *Memoirs*, ii, 149). In concert with Prince Albert he sketched a colourless draft reply, which the queen copied out; it 'began and ended in German, though the body of it was in English.' Prince Albert, in frequent private correspondence with the king of Prussia, had sought to stimulate the king to more active assertion of Prussian power in Germany, and the apparent discrepancy between the prince's ardour and the coolness which Palmerston imposed on his wife was peculiarly repugnant to both her and her husband. Expostulation with Palmerston seemed vain. In June 1848 Prince Albert bade Lord John remind him that every one of the ten thousand despatches which were received annually at the foreign office was addressed to the queen and to the prime minister as well as to himself, and that the replies involved them all. In the following autumn Palmerston remarked on a further protest made in the queen's behalf by Lord John: 'Unfor-

unately the queen gives ear too easily to persons who are hostile to her government, and who wish to poison her mind with distrust of her ministers, and in this way she is constantly suffering under groundless uneasiness.' To this challenge she answered, through Lord John, 1 Oct. 1848: 'The queen naturally, as I think, dreads that upon some occasion you may give her name to sanction proceedings which she may afterwards be compelled to disavow' (WALFOLD, *Lord John Russell*, ii, 47). Unluckily for the queen, Palmerston's action was vehemently applauded by a majority in parliament and in the country, and his defiance of his action in regard to Greece in the Don Pacifico affair in June 1850 elicited the stirring enthusiasm of the House of Commons. The queen, in conversation with political friends like Aberdeen and Clarendon, loudly exclaimed against her humiliation. Lord John was often as much out of sympathy with Palmerston as she, but he knew the government could not stand

without its foreign secretary; and the queen, who was always averse to inviting the perplexities of a change of ministry, viewed the situation with blank despair. In March 1850 she and the prince drafted a statement of their grievances, but in face of the statesman's triumphant appeal to the House of Commons in June it was laid aside. In the summer Lord John recalled Palmerston's attestation to the queen's irritation, and he disavowed any intention of treating her with disrespect. At length, on 12 Aug. 1850, she sent him through Lord John two requests in regard to his future conduct: 'She requires, her words ran,

The queen's demands, 1850.

(1) that the foreign secretary will distinctly state what he proposes in a given case, in order that the queen may know as distinctly to what she has given her royal sanction. (2) Having once given her sanction to a measure, that it be not arbitrarily altered or modified by the minister. Such an act she must consider as failure in sincerity towards the crown, and justly to be visited by the exercise of her constitutional right of dismissing that minister. She expects to be kept informed of what passes between him and the foreign ministers before important decisions are taken, based upon that intercourse; to receive the foreign despatches in good time, and to have the drafts for her approval sent to her in sufficient time to make herself acquainted with their contents before they must be sent off' (MARTIN, ii. 51). Two days afterwards Prince Albert explained more fully to Palmerston, in a personal interview, the queen's grounds of complaint. 'The queen had often,'

Prince Albert on Palmerston. the prince said, 'latterly almost invariably, differed from the line of policy pursued by Lord Palmerston. She had always openly stated her objections; but when overruled by the cabinet, or convinced that it would, from political reasons, be more prudent to waive her objections, she knew her constitutional position too well not to give her full support to whatever was done on the part of the government. She knew that they were going to battle together, and that she was going to receive the blows which were aimed at the government; and she had these last years received several, such as no sovereign of England had before been obliged to put up with, and which had been most painful to her. But what she had a right to require in return was, that before a line of policy was adopted or brought before her for her sanction, she should be in full possession of all the facts and all the motives operating; she felt that in this re-

spect she was not dealt with as she ought to be. She never found a matter "intact," nor a question, in which we were not already compromised, when it was submitted to her; she had no means of knowing what passed in the cabinet, nor what passed between Lord Palmerston and the foreign ministers in their conferences, but what Lord Palmerston chose to tell her, or what she found in the newspapers.'

Palmerston affected pained surprise and solemnly promised amendment, but he remained in office and his course of action underwent no permanent change. A few months later he committed the queen, without her assent, to new discussions with

Fresh discussions. the Austrian government and to new encouragement of Denmark in her claims to Schleswig-Holstein. In this first case Palmerston, after threatening Lord John with resignation, endeavoured to modify his action in accordance with the royal wish, but he was still impatient.

In the winter of 1850 a distasteful domestic question distracted the queen's mind from foreign affairs. Lord John had identified the government with the strong protestant feeling which was roused by Cardinal Wiseman's announcement of the pope's revival of Roman catholic bishoprics in England. Hundreds of protests from public bodies were addressed to the queen in person, and she received them patiently. But she detested the controversy and regretted 'this unchristian and intolerant spirit'

Papal aggression. exhibited by the protestant agitators. 'I cannot bear to hear the violent abuse of the catholic religion, which is so painful and so cruel towards the many innocent and good Roman catholics.' When she opened parliament on 4 Feb. 1851 she resented the cries of 'no popery,' with which she was greeted; but the ministry determined actively to resist the 'papal aggression,' and the queen acquiesced. It was consequently with composure that she saw Lord John's government—partly through intestine differences on the religious question—outvoted in the House of Commons in February 1851. The immediate

Ministerial crisis and deadlock. question at issue was electoral reform. Lord John at once resigned. The queen sent for the conservative leader, Lord Stanley, afterwards Lord Derby, who declined office without adequate support in the House of Commons. He advised a reconstruction of the existing ministry—a course congenial to the queen. On 23 Feb. she consulted Lord Aberdeen with a view to a fusion between whigs and

Peelites, but the combination proved impracticable. Perplexed by the deadlock which the refusals of Derby and Aberdeen created, she turned for advice to the old Duke of Wellington. In agreement with the duke's counsel she recalled Russell after Prince Albert had sent him a memorandum of the recent negotiations. Lord John managed to get through the session in safety and secured the passage of his antipapal Ecclesiastical Titles Bill after completely emasculating it; it received the royal assent on 29 July 1851.

Meanwhile the attention of the court and country had turned from party polemics to a demonstration of peace and goodwill among the nations which excited the queen's highest hopes. It was the inauguration of the Great Exhibition in the Crystal Palace which was erected in Hyde Park. In origin and execution that design was due to Prince Albert; and it had consequently encountered abundant opposition from high Tories and all sections of society who disliked the prince. Abroad it was condemned by absolute monarchs and their ministers as an invitation to revolutionary conspiracy through the suggestion it offered to revolutionary agents in Europe to assemble in London on a spiously innocent pretext, and much nefarious designs against law and order. The result belied the prophets of evil. The queen flung herself with spirit into the enterprise. She interested herself in every detail, and she was rewarded for her energy by the knowledge that the realised scheme powerfully appealed to the imagination of the mass of her people. The brilliant opening ceremony over which she presided on 1 May 1851 evoked a marvellous outburst of loyalty. Her bearing was described on all hands as 'thoroughly regal' (SEARBY, i. 421). Besides twenty-five thousand people in the building, seven hundred thousand cheered her outside as she passed them on her way from Buckingham Palace. It was, she said, the proudest and happiest day of her happy life. Her feelings were gratified both as queen and wife. 'The great event has taken place,' she wrote in her diary (1 May), 'a complete and beautiful triumph—a glorious and touching sight, one which I shall ever be proud of for my beloved Albert and my country . . . Yes! it is a day which makes my heart swell with pride and glory and thankfulness!' In her eyes the great festival of peace was a thousand times more memorable than the thrilling scene of her coronation. In spite of their consorcial fears foreign courts were well represented,

and among the queen's guests were the prince and princess of Prussia, Tennyson, who had been appointed poet laureate in November 1850, in succession to Wordsworth, in the address 'To the Queen,' which he prefixed to the seventh edition of his 'Poems' (March 1851), wrote of the Great Exhibition, in a stanza which was not reprinted:

She brought a vast design to pass
When Europe and the scatter'd ends
Of our fierce world did meet as friends
And brethren in her halls of glass.

The season of the Great Exhibition was exceptionally brilliant. On 13 June another ball *continued* at Buckingham Palace illustrated the reign of Charles II. On 9 July the queen attended a ball at the Guildhall, which celebrated the success of the Exhibition. Everywhere her reception was admirably cordial. When at length she temporarily left London for Court festivities, she expressed pain that Osborne, she expressed pain that 'this brilliant and for ever memorable season should be past.' Of the continuous display of devotion to her in London she wrote to Stackpole: 'All this will be of a use not to be described: it identifies us with the people and gives them an additional cause for loyalty and attachment.' Early in August, when the queen came to Westminster to prorogue parliament, she visited the Exhibition for the last time. In October, on her removal to Balmoral, she made a formal progress through Liverpool and Manchester, and stayed for a few days with the Earl of Ellesmere at Worsley Hall. She manifested intelligent interest in the improvements which manufacturing processes were making in these great centres of industry. Her visit to Peel Park, Salford (10 Oct.), was commemorated by a statue of her, the cost of which was mainly defrayed by 80,000 Sunday school teachers and scholars; it was unveiled by Prince Albert 5 May 1857.

A month after the closing of the Exhibition the dream of happiness was fading. The death of her sour-tempered uncle, King Ernest of Hanover (18 Nov. 1851), was not a heavy blow, but Palmerston was again disturbing her equanimity. Kossuth, the leader of the Hungarian revolution, had just arrived in England; Palmerston openly avowed sympathy with him. Both the queen and Lord John remonstrated, and the queen begged the cabinet to censure his attitude unequivocally; but her appeal was vain. Relief from the tormenting attitude of Palmerston was, however, at hand. It came at a moment when the queen despaired of any

alleviation of her lot. On 2 Dec. 1851 Prince Louis Napoleon by a *coup d'état* made himself absolute head of the French government. Palmerston believed in Napoleon's ability, and a day or two later, in conversation with the French ambassador, Walewski, expressed of his own initiative approbation of the new form of government in France.

Palmerston's removal.

The queen and Lord John viewed Napoleon's accession to power, and the means whereby it had been accomplished, with detestation. Palmerston's precipitate committal of England to a friendly recognition of the new régime before he had communicated with the queen or his colleagues untied the Gordian knot that bound him to the queen. This display of self-sufficiency roused the temper of Lord John, who had assured the queen that for the present England would extend to Napoleon the coldest neutrality. To the queen's surprise and delight, Lord John summarily demanded Palmerston's resignation (19 Dec.) Palmerston feebly defended himself by claiming that in his intercourse with Walewski he had only expressed his personal views, and that he was entitled to converse at will with ambassadors. Lord John offered to rearrange the government so as to give him another office, but this Palmerston declined. The seals of the foreign office were transferred to the queen's friend, Lord Granville.

The queen and the prince did not conceal their joy at the turn of events. To his brother Ernest, Prince Albert wrote without reserve: 'And now the year closes with the happy circumstance for us, that the man who embittered our whole life, by continually placing before us the shameful alternative of either sanctioning his misdeeds throughout Europe, and rearing up the radical party here to a power under his leadership, or bringing about an open conflict with the crown, and thus plunging the only country where liberty, order, and lawfulness exist together into the general chaos—that this man has, as it were, cut his own throat. "Give a rogue rope enough and he will hang himself" is an old English adage with which we have sometimes tried to console ourselves, and which has proved true again here. . . .' (*Duke Ernest's Memoirs*). As a matter of fact, Palmerston's dismissal was a doubtful triumph for the crown. It was, in the first place, not the queen's act; it was the act of Lord John, who was not greatly influenced by court feeling, and it was an act that Lord John lived to regret. Palmerston's popularity in the country grew in proportion to his un-

popularity at court, and, in the decade that followed, his power and ministerial power generally increased steadily at the expense of the crown's influence in both home and foreign affairs. The genuine victory lay with the minister.

IV

Palmerston's removal did not, in fact, even at the moment diminish anxiety at court. 1852 opened ominously.

Lord Derby's first government, 1852. The intentions of France were doubtful. The need of increasing the naval and military forces was successfully urged on the government, but no sooner had the discussions on that subject opened in the House of Commons than Palmerston condemned as inadequate the earliest proposals of the government which were embodied in a militia bill, and, inflicting a defeat on his former colleagues, brought about their resignation on 20 Feb. 1852, within two months of his own dismissal. The queen summoned Lord Derby, who formed a conservative government, with Disraeli as chancellor of the exchequer and leader of the House of Commons. It was not a strong ministry. Its members, almost all of whom were new to official life, belonged to the party of protection; but protection had long since vanished from practical politics, and the queen was disposed to reproach her new advisers with their delay in discerning the impracticability of their obsolete policy. A little more haste, she said, 'would have saved so much annoyance, so much difficulty.' But personal intercourse rapidly overcame her prejudices. Lord Derby proved extremely courteous. Lord Malmesbury, the foreign minister, kept her thoroughly well informed of the affairs of his office, and the personal difficulty that she and her friends had anticipated from Disraeli was held in check.

Early impression of Disraeli. Disraeli had won his first parliamentary repute by his caustic denunciations of the queen's friend Peel, and she was inclined to adopt the widespread view that he was an unprincipled adventurer. He was perfectly aware of her sentiment, and during the ministerial crisis of 1851 he expressed himself quite ready to accept a post that should not bring him into frequent relations with the court. But personal acquaintance with him at once diminished the queen's distrust; his clever conversation amused her. She afterwards gave signal proof of a dispassionate spirit by dismissing every trace of early hostility, and by extending to him in course of time a confidence and a devotion which far exceeded

that she showed to any other minister of her reign. But her present experience of Disraeli and his colleagues was brief. A general election in July left the conservatives in a minority.

In the same month the queen made a cruise in the royal yacht on the south coast, and a few weeks later paid a second private visit to King Leopold at his summer palace at Laeken. The weather was bad, but on returning she visited the chief objects of interest in Antwerp, and steamed close to Calais, so that she might see it. When at Balmoral later in the autumn, information reached her of the generous bequest to her by an eccentric subject, John Camden Neild, of all his fortune, amounting to a quarter of a million. The elation of spirit which this news caused her was succeeded by depression on hearing of the death of the Duke of Wellington on 14 Sept. Death of the Duke of Wellington. 'He was to us a true friend,' she wrote to her uncle Leopold, 'and most valuable adviser. . . we shall soon stand sadly alone. Aberdeen is almost the only personal friend of that kind left to us. Melbourne, Peel, [the third earl of] Liverpool, now the Duke—all gone.' The queen issued a general order of regret to the army, and she put her household into mourning. She went to the lying in state in Chelsea Hospital, and witnessed the funeral procession to St. Paul's from the balcony of Buckingham Palace on 18 Nov.

On 11 Nov. the queen opened the new parliament. Lord Derby was still prime minister, but the position of the government was hopeless. On 3 Dec. Disraeli's budget was introduced, and on the 17th it was thrown out by a majority of nineteen. Lord Derby promptly resigned.

For six years the queen's government had been extraordinarily weak. Parties were disorganised, and no leader enjoyed the full confidence of any large section of the House of Commons. A reconstruction of party seemed essential to the queen and the prince. In November she had discussed with Lord Derby a possible coalition, and the chief condition she then imposed was that Palmerston should not lead the House of Commons. When Derby resigned she made up her mind to give her views effect. She sent for veteran statesmen on each side, Lord Aberdeen and Lord Lansdowne, both of whom she had known long and fully trusted. Lansdowne was ill, and Aberdeen came alone. On 19 Dec. she wrote to Lord John Russell (*WALFORD, Life*, ii, 161): 'The queen thinks the moment to

have arrived when a popular, efficient, and durable government could be formed by the sincere and united efforts of all parties professing conservative and liberal opinions.' Aberdeen undertook to form such a government, with the queen's assistance. Palmerston's presence was deemed essential, and she raised no objection to his appointment to the home office. The foreign office was bestowed on Lord John, who almost immediately withdrew from it in favour of the queen's friend, Lord Clarendon. On 28 Dec. Aberdeen had completed his task, and the queen wrote with sanguine satisfaction to her uncle Leopold of 'our excellent Aberdeen's success,' and of this 'realisation of the country's and of our own most ardent wishes.'

Thus the next year opened promisingly, but it proved a calm before a great storm. On 7 April 1853 the queen's fourth and youngest son was born, and was named Leopold, after the queen's uncle, King Leopold, who was his godfather. George, the new king of Hanover, was also a sponsor, and the infant's third name of Duncan celebrated the queen's affection for Scotland. She was not long in retirement, and public calls were numerous. Military training, in view of possible warlike compliments on the continent, was proceeding actively with the queen's concurrence. Twice—21 June and 5 August 1853—she visited, the first time with her guests, the now king and queen of Hanover, a camp newly formed on Obbham Common, and (on 5 Aug. 1901) a granite cross was unveiled to commemorate the first of these visits. In the interval between the two the queen, Prince Albert, the prince of Wales, Princess Royal, and Princess Alice had been disabled by an attack of measles, and Prince Albert, to the queen's alarm, suffered severely from nervous prostration. On 11 Aug. the navy was encouraged by a great naval review which the queen held at Spithead. Before the month ended the queen paid a second visit to Dublin, in order to inspect an exhibition of Irish industries. Second visit to Dublin, 1853. which was framed on the model of the Great Exhibition of 1851. A million Irish men and women are said to have met her on her landing at Kingstown. The royal party stayed in Dublin from 30 Aug. to 3 Sept., and attended many public functions. As on the former occasion, the queen spent, she said, 'a pleasant, gay, and interesting time.'

Throughout 1852 the queen continued her frank avowals of repugnance to personal intercourse with Napoleon III. Her relations with the exiled royal family of France

At queen's request Aberdeen forms coalition ministry.

rendered him an object of suspicion and dislike, and the benevolence with which Palmerston regarded him did not soften

Napoleon III's advances. her animosity. But she gradually acknowledged the danger of allowing her personal feeling to compromise

peaceful relations with France. On 2 Dec. 1852 the empire had been formally recognised by the European powers, and the emperor was making marked advances to England. The French ambassador in London sounded Malmesbury, the foreign minister (December 1852), as to whether a marriage between the emperor and Princess Adelaide of Hohenlohe, daughter of the queen's half sister, would be acceptable. The queen spoke with horror of the emperor's religion and morals, and was not sorry that the discussion should be ended by the emperor's marriage in the following January with Mlle. Eugénie de Montijo, a lady with whom the irony of fate was soon to connect the queen in a lasting friendship. Meanwhile the queen's uncle, King Leopold, realised the wisdom of promoting better relations between her and the emperor, whose openly expressed anxiety to secure her countenance was becoming a source of embarrassment. In the early months of 1853 Duke Ernest, Prince Albert's brother, after consultation with King Leopold, privately visited Paris and accepted the hospitality of the Tuileries. Emperor and empress outbid each other in their laudation of Queen Victoria's domestic life. The empress expressed a longing for close acquaintance with her, her husband, and children. A revolution had been worked, she said, in the conditions of court life throughout Europe by the virtuous examples of Queen Victoria and of her friend and ally the queen of Portugal. Duke Ernest promptly reported the conversation to his brother and sister-in-law. The queen, always sensitive to sympathy with her domestic experiences, was greatly mollified. Her initial prejudices were shaken, and the political situation soon opened the road to perfect amity.

Napoleon lost no opportunity of improving the situation. At the end of 1853 he boldly suggested a matrimonial alliance between the two families. With the approval of King Leopold and of Palmerston he proposed a marriage between his first cousin, Prince Jerome, who ultimately became the political head of the Bonaparte family, and the queen's first cousin, Princess Mary of Cambridge, afterwards Duchess of Teck. Princess Mary was a frequent guest at Windsor, and constantly shared in the queen's recreations. The queen had no faith in forced political

marriages, and at once consulted the princess, whose buoyant, cheerful disposition endeared her to all the royal family. The princess rejected the proposal without hesitation, and the queen would hear no more of it. Palmerston coolly remarked that Prince Jerome was at any rate preferable to a German princeling.

But although Napoleon's first move led to nothing, an alliance between France and England was already at hand. It was not France among the countries of Europe that England under the queen's sway was first

Quarrel with Russia. to meet in war. It was in conflict with Russia that her country, under the spell of Palmerston,

in conjunction with France, was to break the peace of Europe for the first time in her reign. In the autumn of 1853 Russia pushed her claims to protect the Greek Christians of the Turkish empire with such violence as to extort from Turkey a declaration of war (23 Oct.) The men of the British nation held that England was under an imperative and an immediate obligation to intervene by force of arms in behalf of Turkey, her protégé and ally. The English cabinet was divided in opinion. Aberdeen regarded the conduct of Russia as indefensible, but hoped to avert war by negotiation. Palmerston, then home secretary, took the popular view, that the inability of Turkey to meet Russia single-handed allowed no delay in intervention. On 16 Dec. Palmerston suddenly resigned, on the ostensible ground that he differed from proposals of electoral reform which his colleagues had adopted. The true reason was his attitude to the foreign crisis. Signs that he interpreted the voice of the country aught abounded. The ministry felt compelled to readmit him to the cabinet, with the certainty of destroying the peace of Europe.

To the court the crisis was from every point of view distressing. The queen placed implicit trust in Aberdeen, and with him she hoped to avoid war. But Palmerston's restored predominance alarmed her. Abroad the situation was not more reassuring. The Emperor Napoleon promptly offered to join his army with that of England, and the king of Sardinia promised to follow his example. But other foreign sovereigns with whom the queen was in fuller sympathy privately entreated her to thwart the bellicose designs which they identified with her

Popular excitement. most popular minister's name. The tsar protested to her the innocence of his designs (November 1853). The nervous king of Prussia petitioned her to keep the peace, and even sent

her an autograph note by the hand of General von Gröben. Clarendon, the foreign minister, gave her wise advice regarding the tenor of her replies. She reproached the king of Prussia with his weakness in failing to aid the vindication of international law and order (17 March 1851), and her attitude to all her continental correspondents was irreproachable. But the rumour spread that she and her husband were employing their foreign intimacies against the country's interests. Aberdeen's hesitation to proceed to extremities, the known dissensions between Palmerston and the court, the natural jealousy of foreign influences in the sphere of government, led the suspicion that the crown at the instance of a foreign prince consort was obstructing the due assertion of the country's rights, and was playing into the hands of the country's foes. As the winter of 1853-4 progressed without any signs of decisive action on the part of the English government, popular indignation redoubled and burst in its fullest fury on the head of Prince Albert. He

The attack on Prince Albert.

was denounced as the chief agent of an Austro-Belgian-Coburg-Orléans clique, the avowed enemy of England, and the subservient tool of Russian ambition. The tsar, it was seriously alleged, communicated his pleasure to the prince through the prince's kinsmen at Gotha and Brussels. 'It is pretended,' the prince told his brother (7 Jan. 1854), 'that I whisper [the tsar's orders] in Victoria's ear, she gets round old Aberdeen, and the voice of the only English minister, Palmerston, is not listened to—ay, he is always intrigued against, at the court and by the court' (Dickens *Unsettled Memoirs*, ii. 46). The queen's husband, in fact, served as scapegoat for the ministry's vacillation. Honest men believed that he had exposed himself to the penalties of high treason, and they gravely doubted if the queen herself were wholly guiltless.

The queen took the calumnies to heart, and Aberdeen, who was, she told Stockmar, 'all kindness, sought vainly for a time to console her. 'In attacking the prince,' she pointed out to Aberdeen (4 Jan. 1854), 'who is one and the same with the queen herself, the throne is assailed, and she must say she little expected that any portion of her subjects would thus requit the unceasing labours of the prince.' The prime minister in reply spoke with disdain of 'these contemptible exhibitions of malevolence and faction,' but he admitted that the prince held an anomalous position which the constitution had not provided for.

When the queen opened parliament on 31 Jan. she was well received, and the leaders of both sides—Lord Aberdeen and Lord Derby in the upper house and Lord John Russell and Spencer Walpole in the commons—emphatically repudiated the slanders on her and her husband. The tide of abuse thereupon flowed more sluggishly, and it was temporarily checked on 27 Feb.

1854, when the queen sent a message to the House of Lords announcing the breakdown of negotiations with Russia. War was formally declared next day, and France and Sardinia affirmed their readiness to fight at England's side.

The popular criticism of the queen was unwarranted. Repulsive as the incidents of war were to her, and active as was her sympathy with the suffering that it entailed, she never ceased to urge her ministers and her generals, when war was actually in being, to press forward with dogged resolution and not to slacken their efforts until the final goal of victory was reached. Her attitude was characterised alike by dignity and common sense. She was generous in the encouragement she gave all ranks of the army and navy. For months she watched in person the queen the departure of troops. On 10 March she inspected at Spithead the great fleet which was destined for the Baltic under Sir Charles Napier. At the opening of the conflict the government proposed a day of humiliation for the success of the British arms. The queen was not enthusiastic in favour of the proposal. She warned Aberdeen of the hypocrisy of self-abasement in the form of prayers, and at the same time she deprecated abuse of the enemy.

Some alleviation of anxiety was sought in the ordinary incidents of court life. On 12 May the queen, by way of acknowledging the alliance into which she had entered with the emperor, paid the French ambassador, Count Walewski, the high compliment of attending a *bal costumé* at the French embassy at Albert Gate. The queen alone wore ordinary evening dress. Next day she went to Woolwich to christen in her husband's honour a new battleship of enormous dimensions, the Royal Albert. In June the queen entertained for a month her cousin, the new king of Portugal, Pedro V, and his brother the Duke of Oporto, who afterwards succeeded to the throne. Their mother, in whom she was from her childhood deeply interested, had died in childhood seven months before (20 Nov. 1853). The queen showed the young man every attention, taking them

with her to the opera, the theatre, and Ascot. A suggestion made to them that Portugal should join England in the Crimean war was reasonably rejected by their advisers. The chief spectacular event of the season was the opening by the queen at Sydenham, on 10 June, of the Crystal Palace, which had, much to the prince's satisfaction, been transferred from Hyde Park after the Great Exhibition.

Through the summer the queen shared with a large section of the public a fear that the government was not pursuing the war with requisite energy. When Lord Aberdeen, in a speech in the House of Lords on 20 June, argumentatively defended Russia against violent assaults in the English press, the queen promptly reminded him of the misapprehensions that the appearance of lukewariness must create in the public mind.

Whatever were the misrepresentations of the tsar's policy, she said, it was at the moment incumbent on him to remember that 'there is enough in that policy to make us fight with all our might against it.' She and the prince incessantly appealed to the ministers to hasten their deliberations and to improve the organisation of the Crimean army. A hopeful feature of the situation was Napoleon III's zeal. In July the prince accepted the emperor's invitation to inspect with him the camp at St. Omer, where an army was fitting out for the Crimea. The meeting was completely successful, and the good relations of the rulers of the two countries were thus placed on a surer foundation. While at Balmoral in September the queen was elated to receive 'all the most interesting and gratifying details of the splendid and decisive victory of the Alma.' On leaving Balmoral (11 Oct.) she visited the docks at Grimsby and Hull, but her mind was elsewhere. From Hull (13 Oct.) she wrote to her uncle Leopold, 'We are, and indeed the whole country is, entirely engrossed with one idea, one anxious thought—the Crimea.' News of the victories of Inkermann (25 Oct.) and Balaclava (5 Nov.) did not entirely relieve her anxiety. 'Such a time of suspense,' she wrote on 7 Nov., 'I never expected to see, much less to feel.'

During the winter the cruel hardships which climate, disease, and failure of the commissariat inflicted on the troops strongly stirred public feeling. The queen initiated or supported all manner of voluntary measures of relief. With her own hands she made woollen comforters and mittens for the men. On New Year's day, 1855, she wrote to the commander-in-chief, Lord Raglan, express-

ing her sympathy with the army in its 'sad privations and constant sickness,' and entreated him to make the camps 'as comfortable as circumstances can admit of.' No details escaped her, and she especially called his attention to the rumour 'that the soldiers' coffee was given them green instead of roasted.' Although the queen and the prince grew every day more convinced of the defective administration of the war office, they were unflinchingly loyal to the prime minister, Lord Aberdeen, who was the target of much public censure. Before the opening of parliament in January 1855, by way of proof of their personal sympathy, she made him a knight of the garter.

But it was beyond her power, had it been her wish, to prop the falling government. The session no sooner opened than Lord John insisted on succeeding in face of the outcry against the management of the war. The blow was serious, and Lord Aberdeen was with difficulty persuaded by the queen to hold on. But complete shipwreck was not long delayed. On 20 Jan. the government was hopelessly defeated on a hostile motion for an inquiry into the management of the war. Aberdeen's retirement was in-

evitable, and it was obvious that the queen was fain to face with retires. the distasteful necessity of conferring the supreme power in the state on her old enemy, Palmerston. The situation called for all her fortitude. She took time before submitting. A study of the division lists taught her that Lord Derby's supporters formed the greater number of the voters who had destroyed Lord Aberdeen's ministry. She therefore, despite Aberdeen's warning, invited Lord Derby to assume the government. Derby explained to her that he could not without aid from other parties, and a day later he announced his failure to secure extraneous assistance. The queen then turned to the veteran whig, Lord Lansdowne, and bade him privately seek advice for her from all the party leaders. In the result she summoned Lord John Russell on the ground that his followers were in number and compactness second to Lord Derby's. But she could not blind herself to the inevitable result of the negotiations, and, suppressing her private feeling, she assured Lord John that she hoped Palmerston would join him. But she had not gone far enough. Lord John was not strong enough to accept the queen's commands. A continuance of the deadlock was perilous. The queen confided to her sympathetic friend Lord Clarendon her reluctance to take the

next step, but he convinced her that she had no course but one to follow. He assured her that Palmerston would prove conciliatory if frankly treated. Thereupon she took the plunge and bade Palmerston form an administration. Palmerston's popular strength was undoubted, and resistance on the part of the crown was idle. As soon as the die was cast the queen with characteristic good sense indicated that she would extend her full confidence to her now prime minister.

On 15 Feb. he wrote to his brother: 'I am backed by the general opinion of the whole country, and I have no reason to complain of the least want of cordiality or confidence on the part of the court.' To the queen's satisfaction Lord Aberdeen had persuaded most of his colleagues to serve temporarily under his successor, but within a few days the Peelite members of the old government went out, the unity of the government was assured, and Palmerston's power was freed of all restraint.

Baseless rumours of the malign influence exerted by Prince Albert were still alive, but no doubt was permissible of the devoted energy with which the queen was promoting the relief of the wounded. In March she visited the hospitals at Chatham and Woolwich, and complained privately that she was not kept informed in sufficient detail of the condition and prospects of disabled soldiers on their return home. A new difficulty arose with the announcement on the part of Napoleon that he intended to proceed to the Crimea to take command of the French army there. His presence was certain to provoke complications in the command of the allied forces in the field. The emperor hinted that it might be well for him to discuss the project in person with the queen. She and her advisers at once acceded to the suggestion, and she invited him and the empress to pay her a state visit. On all sides she was thrown into association with men who had inspired her with distrust, but she cheerfully yielded her private sentiments at the call of a national crisis. The queen made every effort to give her guests a brilliant reception. She personally supervised every detail of the programme and drew up with her own hands the lists of guests who were to be commanded to moot them. On 16 April the

emperor and empress reached Dover and proceeded through London to Windsor. Every elaborate formality that could mark the entertainment of sovereigns was strictly observed, and the emperor was proportionately impressed. The ordeal proved far less trying

than the queen feared. At a great banquet in St. George's Hall on the evening of his arrival, the emperor won the queen's heart by his adroit flattery and respectful familiarity. She found him 'very quiet and amiable and easy to get on with.' There was a review of the household troops in Windsor Park next day, and on the 18th the queen bestowed on Napoleon the knighthood of the garter. A visit to Her Majesty's opera house in the Haymarket on the 19th evoked a great display of popular enthusiasm, and amid similar manifestations the royal party went on the 20th to the Crystal Palace. On the 21st the visit ended, and with every sign of mutual goodwill the emperor left Buckingham Palace for Dover. Of 'the great event' the queen wrote: 'On all it has left a pleasant satisfactory impression.' The royal party had talked much of the war with the result that was desired. On 25 April the emperor wrote to the queen that he had abandoned his intention of going to the Crimea. But throughout the hospitable gaieties the ironies of fate that dog the steps of sovereigns were rarely far from the queen's mind. Three days before the emperor arrived, the widowed ex-queen of the French, who had fallen far from her high estate, visited her at Windsor, whence she drove away unnoticed in the humblest of equipages. After the great ball in the Waterloo room at Windsor, when she danced a quadrille with the emperor on the 17th, she noted in her diary, 'How strange to think that I, the granddaughter of George III, should dance with the Emperor Napoleon, nephew of England's great enemy, and now my nearest and most intimate ally, in the Waterloo room, and this ally, only six years ago, living in this country an exile, poor and unthought of!'

Meanwhile peace proposals, which proved abortive, were under consideration at a conference of the powers at Vienna; but the queen was resolved that none but the best possible terms should be entertained by her ministers. Lord John represented England and M. Drouyn de Lhuys France, and when Lord John seemed willing to consider conditions that were to the queen unduly favourable to Russia, she wrote peremptorily (25 April 1855) to Palmerston, 'How Lord John Russell and Lord John M. Drouyn can recommend such proposals for our acceptance is beyond her [our] comprehension.' In May the queen identified herself conspicuously with the national feeling by distributing with her own hands war medals to the returned soldiers on the Horse Guards' Parade

April 1855.

(18 May). It was the queen's own suggestion, and it was the first time that the sovereign had performed such functions. 'The rough hand of the bravo and honest private soldier came,' she said, 'for the first time in contact with that of their [his] sovereign and their [his] queen.' Later in the day she visited the riding school in Wellington barracks while the men were assembled at dinner. In the months that followed the queen and prince were indefatigable in exerting their influence against what they deemed unworthy concessions to Russia. From their point of view the resignation of Lord John on 16 July rendered the situation more hopeful.

At the moment domestic distress was occasioned by an outbreak of scarlet fever in the royal household, which attacked the four younger children. On their recovery the queen and prince sought to strengthen the French alliance by paying the emperor a return visit at Paris. Following the example of Prince Albert, the emperor had organised a great 'Exposition,' which it was his desire that his royal friends should compare with their own. On 20 Aug., after parliament had been prorogued by commission, the queen travelled, with the prince, the prince of Wales, and the Princess Royal, from Osborne to Boulogne. There the emperor met them. By an accident they reached Paris rather late, but they passed through it in

procession to the palace of St. Cloud, and Marshal Magnan declared that the great Napoleon was not so warmly received on his return from Ansterlitz. The occasion was worthy of enthusiasm. It was the first time that an English sovereign had entered the French capital since the infant Henry VI went there to be crowned in 1422. The splendid festivities allowed the queen time for several visits, not merely to the Exposition, but to the historic buildings of Paris and Versailles. Their historical associations greatly interested her, especially those which recalled the tragedies—always fascinating to her—of Marie Antoinette or James II. Among the official celebrations were a review on the Champ de Mars of 45,000 troops, and balls of dazzling magnificence at the Hôtel de Ville and at Versailles. At the Versailles fête, on 26 Aug., the queen was introduced for the first time to Count (afterwards Prince) Bismarck, then Prussian minister at Frankfurt, from whose iron will her host, and afterwards her daughter, were soon to suffer. The queen conversed with him in German with great civility. He thought that she was interested in him,

but lacked sympathy with him. The impression was correct. On reaching Boulogne on her way to Osborne (27 Aug.) she was accorded a great military reception by the emperor, who exchanged with her on parting the warmest assurances of attachment to her, her husband, and her children. The anticipations of a permanent alliance between the two countries seemed at the moment likely to be fulfilled, but they quickly proved too sanguine. The political relations between Napoleon III and the queen were soon to be severely strained, and her faith in his sincerity to be rudely shaken. Yet his personal courtesies left an indelible impression on her. Despite her political distrust she constantly corresponded with her host in autograph letters in terms of a dignified cordiality until the emperor's death; and the sympathetic affection which had arisen between the queen and the Empress Eugénie steadily grew with time and the vicissitudes of fortune.

The month (September–October) which was spent, as usual, at Balmoral was brightened by two gratifying incidents. On 10 Sept. there reached the queen news of the fall of Sebastopol, after a siege of nearly a year—a decisive triumph for British arms, which brought honourable peace well in sight. Prince Albert himself superintended the lighting of a bonfire on the top of a neighbouring cairn. The other episode appeared more directly to the queen's maternal feeling. The eldest son of the prince of Prussia (afterwards the Emperor Frederick I), who, attended by Count von Moltke, was at the time a guest at Balmoral, requested permission to propose marriage to the Princess Royal. She was barely sixteen, and he was twenty-four, but there were indications of a mutual affection. The manly goodness of the prince strongly appealed to the queen, and an engagement was privately made on 29 Sept. The public announcement was to be deferred till after the princess's confirmation next year. Prince Albert denied that the betrothal had any political significance. From the point of view of English politics it had at the instant little to recommend it. A close union between the royal families of London and Berlin was not likely to recommend itself to the queen's late host of Paris. To most English statesmen Prussia appeared to be on the downward grade; and although Prince Albert and the queen had faith in its future, they were personally disappointed by the incompetence of its present ruler, the uncle of their future son-in-law. He had deserted them in the recent war,

gagement.

but was still seeking their influence in Europe in his own interests in private letters to the queen, which he conjured her not to divulge in Downing Street or at the Tuileries. His pertinacity had grown so troublesome that, to avoid friction, she deemed it wisest to suppress his correspondence unanswered (*Duke Ernest*, vol. iii.) It was not surprising that, when the news of the betrothal leaked out, the public comments should be unpleasant to the court. The 'Times' on 3 Oct. denounced it with heat as an act of truckling 'to a paltry German dynasty.'

In November, when the court was again at Windsor, the queen extended her acquaintance among great kings and statesmen by receiving a visit from her second ally in the Crimea, Victor Emanuel, king of Sardinia, and his minister, Count Cavour, and the affairs of one more country of Europe were pressed upon her attention. The king's brother, the Duke of Genoa, had been her guest in 1853, and she had presented him with a riding-horse in words that he interpreted to imply sympathy with the efforts of Cavour and his master to unite Italy under a single king, and to purge the separate states of native tyranny or foreign domination (*ib.* iii. 22-3). Victor Emanuel had come to Windsor in effect to seek confirmation of his brother's version of the queen's sentiment, and to test its practical value. He had just been at the Tuileries, where Napoleon was encouraging, while Palmerston, now prime minister, was known to sympathise with the Italian aspiration. It was not opportune at the moment for Palmerston to promise material aid; while the prince, however deeply he deplored the misgovernment which it was sought to annul in Italy, deprecated any breach with Austria, which ruled in North Italy. He and the queen, moreover, dreaded the kindling of further war in Europe, in whatever cause. Victor Emanuel and Cavour therefore received from the queen cold comfort, but she paid the king every formal honour, despite his brusque and unrefined demeanour. He was invested with the garter on 5 Dec., and a great banquet was given him in St. George's Hall in the evening. When he departed the queen rose at four o'clock in the morning to bid him farewell.

Meanwhile peace was arranged in Paris with Russia, and the queen opened parliament on 31 Jan. 1856 amid great rejoicing.

On 30 March the treaty was signed and the encroachment of Russia on Turkey was checked.

Napoleon had shown much supineness in the negotiations and seemed to be developing

a tendency to conciliate the common enemy, Russia. But the queen exchanged hearty congratulations with him, and on 11 April she celebrated the general harmony by conferring the knighthood of the garter on Palmerston, to whom she acknowledged, with some natural qualifications, the successful issue to be mainly due.

Henceforth the army, to a larger extent than before, was the queen's constant care. A visit to the military hospital at Chatham on 16 April was followed by a first visit to the newly formed camp at Aldershot.

There the queen, for the first of many times, slept the night in the royal pavilion, and next day she reviewed eighteen thousand men. She was on horseback, and wore the uniform of a field-marshal with the star and riband of the garter. Shortly after she laid two foundation stones—of a new military (the Royal Victoria) hospital at Netley (19 May), and of Wellington College, Sandhurst, for the sons of officers (2 June). Much of the summer she spent in welcoming troops on their return from the war. On 7 and 8 June the queen, accompanied by her guests, the king of the Belgians and Prince Oscar of Sweden, inspected a great body of them at Aldershot, and addressed to them stirring words of thanks and sympathy. Thoroughly identifying herself with the heroism of her soldiers

and sailors, she instituted a decoration for acts of conspicuous valour in war, to be known as the Victoria Cross (V.C.); the decoration carried with it a pension of 10*l.* a year. A list of the earliest recipients of the honour was soon drawn up, and the crosses were pinned by the queen herself on the breasts of sixty-two men at a great review in Hyde Park next year (26 June 1857).

A melancholy incident had marked her visit to Aldershot on 8 June 1856. While the commander-in-chief, Lord Hardinge, was speaking to her he was seized by incurable paralysis, and had to vacate his post. An opportunity seemed thus presented to the queen of tightening the traditional bond between herself and the army, on which recent events had led her to set an enhanced value. Of no prerogative of the crown was the queen more tenacious than that which gave her a nominal control of the army through the commander-in-chief. It was a control that was in name independent of parliament, although that body claimed a concurrent authority over the military forces through the secretary of state for war. Parliament was in course of time, to the queen's dismay, to make its authority over the army

sole and supreme, to the injury of her prerogative. But her immediate ambition was to confirm the personal connection between the army and herself. She therefore induced Palmerston to sanction the appointment of her cousin, George, duke of Cambridge, as commander-in-chief, in succession to Lord Hardinge (14 July 1856). The duke had held a command in the Crimea, and the queen's recent displays of attachment to the army rendered it difficult for her advisers to oppose her wish. But the choice was not in accord with public policy, and in practical effect ultimately weakened the military prerogative which she sought to strengthen.

Public and private affairs justified a season of exceptional gaiety. The Princess Royal had been confirmed on 20 March and her betrothal became generally known, when in May Prince Frederick William, again accompanied by Von Moltke, paid the court another visit. The queen's spirits ran high. On 7 May she gave a great banquet to the leaders of both parties and their wives, and she was amused at the signs of discomfort which made themselves apparent. But Lord Derby told the prince that the guests constituted 'a happy family' (MALMESBURY, *Memoirs*). Balls were incessant, and at them all the queen danced indefatigably. On 9 May the new ball-room and concert-room at Buckingham Palace, which Prince Albert had devised, was brought into use for the first time on the occasion of a ball in honour of the Princess Royal's *début*. On 27 May the queen attended a ball at the Turkish ambassador's, and, to the ambassador's embarrassment, chose him for her partner in the first country dance. At a ball in the Waterloo Gallery at Windsor on 10 June the queen danced every dance, and finally a Scottish reel to the bagpipes (MOLTKE, *Lettres*, vol. i. *passim*; MALMESBURY, *Memoirs*, pp. 380 sqq.). On 20 June she entertained Sir Fenwick Williams of Kars at Buckingham Palace. On 26 June the Duke of Westminster gave a great ball in her honour at Grosvenor House. On 9 July there was a state reception by her of the guards on their home-coming from the Crimea. From 10 to 28 Aug. the prince and princess of Prussia, the father and mother of her future son-in-law, were her guests, and later in the autumn the queen received at Balmoral Miss Florence Nightingale, to whom she had sent, in the previous January a valuable memorial jewel. In November 1856 the family were plunged in mourning by the death of Prince Leining-

gen, the queen's half-brother and a companion of her youth.

The next year (1857) involved the queen in a new and great public anxiety, and the serious side of life oppressed her. Parliament was opened by commission on 8 Feb., and before the end of the month the country heard the first bitter cry of the Indian mutiny. Next month Palmerston was defeated in the House of Commons on Cobden's motion condemning his warlike policy in China. The queen, with characteristic reluctance, assented to his demand for a dissolution. His appeal to the country received a triumphant answer, and the new parliament assembled with a majority of seventy-nine in his favour—a signal tribute to his personal popularity. On 14 April the queen's youngest child, Princess Beatrice, was born at Buckingham Palace, and on the 30th the queen suffered much grief on the death of her aunt, the Duchess of Gloucester, the last surviving child of George III.; 'we all looked upon her,' said the queen, 'as a sort of grandmother.' At the time the forthcoming marriage of her eldest daughter began to occupy her thoughts. On 16 May the betrothal was formally announced at Berlin, and on the 25th the queen sent a message to parliament asking for a provision for the princess. It was her earliest appeal to the nation for the

grant to pecuniary support of her children. The request was favourably entertained. The government proposed a dowry of 40,000*l.* and an annuity of 8,000*l.* Roebuck raised the objection that the marriage was an 'entangling alliance,' and opposed the grant of an annuity. Sir George Cornewall Lewis, the chancellor of the exchequer, called attention to the fact that the queen's recent expenses in connection with the French visits were defrayed out of her income, and that the eldest daughters of George II and George III. each received a dowry of 80,000*l.* and an annuity of 5,000*l.* All parties finally combined to support the government's proposal, which found in its last stages only eighteen dissentients. The royal betrothal continued to be celebrated by brilliant and prolonged festivities. In June and July Prince Frederick William once more stayed at court, and Von Moltke, who was again his companion, declared the succession of gaieties to be overpowering. One day (15 June) there was a state visit to the Princess's Theatre to see Keán's spectacular production of Shakespeare's 'Richard II.' Next day the infant Princess Beatrice was baptised. On 11 June the Ascot ceremonies were conducted in full state, and among the royal guests was

M. Achille Fould, the Paris banker and Napoleon III's minister of finance. On the 17th the whole court attended the first Handel festival at the Crystal Palace, when 'Judas Maccabeus' was performed; the royal company drove to and fro in nine four-in-hands. On the 18th a levee was followed by a state ball, in which the queen danced with unabated energy. Hardly a day passed without an elaborate ceremonial. On 20 June a military review took place in Hyde Park amid extraordinary signs of popular enthusiasm, and the first batch of Victoria crosses was distributed. From 29 June to 2 July the queen stayed with the Earl of Ellesmere at Worsley Hall to inspect the art treasures exhibition at Manchester. Next month she laid the foundation at Wandsworth Common of the Royal Victoria Patriotic Asylum for daughters of soldiers, sailors, and marines, and before the end of the month time was found for a visit to Aldershot. Royal personages from the

Royal
guests.

continent thronged the queen's palaces. The king of the Belgians brought his daughter, the Princess Charlotte, and her fiancé the Archduke Maximilian of Austria, who was later to lay down his life in Mexico under heartrending circumstances. The prince of Hohenzollern, the queen of the Netherlands, and the Duke and Duchess of Montpensier all interested their royal hostess. She was gratified, too, on both personal and political grounds, by a short visit to Osborne of the Grand Duke Constantine of Russia, brother of the reigning tsar Alexander II. He had been invited to the Tuileries by Napoleon, who was ominously seeking every opportunity of manifesting goodwill to Russia, and the queen did not wish to be behind him in showing courtesies to her recent foe.

The constant intercourse of the queen and the prince at this moment with the royal families of Europe led her to define her husband's rank more accurately than had been done before. On 26 June 1857, by royal letters patent, she conferred on him the title of prince consort. 'It was always a source of weakness,' the prince wrote, 'for the crown that the queen always appeared before the people with her *foreign* husband.' But it was doubtful whether this bestowal of a new name effectively removed the embarrassment. The 'Times' wrote sneeringly that the new title guaranteed increased homage to its bearer on the banks of the Spree and the Danube, but made no difference in his position anywhere else. Abroad it achieved the desired result. When on 29 July the

prince attended at Brussels the marriage of the ill-fated Archduke Maximilian with the Princess Charlotte of Belgium, he was accorded precedence before the Austrian archdukes and immediately after the king of the Belgians.

The English government still deemed it prudent to cultivate the French alliance, but the emperor's policy was growing enigmatic, and in the diplomatic skirmishes among the powers which attended the final adjustment, in accordance with the provisions of the treaty of Paris, of the affairs of the Balkan peninsula, he and the English government took opposite sides. The anxiety of the emperor to maintain good personal relations with the queen was the talisman which restored harmony. A few informal words with the queen, the emperor assured her ministers, would dissolve all difficulties. Accordingly he and the empress were invited to pay a private visit to Osborne, and they stayed there from 6 to 10 Aug. The French ministers, Walewski and Persigny, accompanied their master, and the queen was attended by Palmerston and Clarendon. The blandest cordiality characterised the discussion, but from the point of view of practical diplomacy advantage lay with the emperor. He had supported the contention of Russia and Sardinia that it was desirable to unite under one ruler the two semi-independent principalities of Wallachia and Moldavia. The English government supported Austria's desire to keep the two apart. Napoleon now agreed to the continued separation of the principalities; but in 1859, when they, by their own efforts, joined together and founded the dominion which was afterwards named Roumania, he insisted on maintaining the union. When the Osborne visit was ended affectionate compliments passed between the emperor and the queen in autograph letters, and the agreement was regarded as final. The queen wrote with ingenuous confidence of the isolation that characterised the position of a sovereign, but added that fortunately her ally, no less than herself, enjoyed the compensation of a happy marriage. The ostentatious activity with which the emperor was strengthening his armaments at Cherbourg hardly seemed promising for the continuance of such personal harmony, but the emperor paradoxically converted the warlike preparations which were going forward almost within hail of the English shore, into new links of the chain of amity which was binding the two royal families together. At his suggestion, within a fortnight of his

Relations
with Na-
poleon III.

leaving Osborne, the queen and the prince crossed in her yacht *Victoria* and *Albert* to Cherbourg on 19 Aug. in order to inspect the dockyard, arsenal, and fortifications. Every facility of examination was given them, but amid the civilities of the welcome the queen did not ignore the use to which those gigantic works might be put if England and France came to blows. The relations of the queen and emperor abounded in irony.

Meanwhile the nation was in the throes of the Indian mutiny—a crisis more trying and harrowing than the recent war. Having broken out in the previous June, it was in August at its cruel height, and the queen, in common with all her subjects, suffered acute mental torture. She eagerly scanned the news from the disturbed districts, and, according to her wont, showered upon her ministers entreaties to do this and that in order to suppress the rebellion with all available speed. Palmerston resented the queen's urgency of counsel, and wrote (18 July) with unbecoming sarcasm, to which she was happily blind, how fortunate it was for him that she was not on the opposition side of the House of Commons. At the same time he reminded her that 'measures are sometimes best calculated to succeed which follow each other step by step.' The minister's cavils only stimulated the activity of her pen. She left Osborne for her autumn holiday at Balmoral on 28 Aug. Parliament was still sitting. Her withdrawal to the north before the prorogation excited adverse criticism, but throughout her sojourn at Balmoral little else except India occupied her mind. She vividly felt the added anxieties due to the distance and the difficulty of communication. Happily, just after the court left Scotland (on 16 Sept.) events took a more favourable turn. On 3 Dec., when the queen opened parliament in person, the mutiny was in process of extinction.

The sudden death of the Duchess de Nemours in November at Claremont increased at the time the queen's depression. 'We were like sisters,' she wrote; 'bore the same name, married the same year, our children of the same age.' But the need of arranging for the celebration of her eldest daughter's marriage soon distracted her attention. As many as seventeen German princes and princesses accepted invitations to be present. The festivities of the Princess opened on 19 Jan. 1868 with a Royal state performance at Her Majesty's Theatre, when 'Macbeth' was performed, with Phelps and Miss Faucit in

the chief parts, and was followed by Mr. and Mrs. Keeley's rendering of the farce of 'Twice Killed.' The wedding took place at St. James's Palace on the 25th, and eight days later the bride and bridegroom left England. The queen felt the parting severely, and dwelt upon her mixed feelings of joy and sorrow in her replies to the addresses of congratulation which poured in upon her.

Before the queen quite reconciled herself to the separation from her daughter, she was suddenly involved in the perplexities of a ministerial crisis. The French alliance which Palmerston had initiated proved a boomerang and destroyed his government. On 15 Jan. an explosive bomb had been thrown by one Orsini, an Italian refugee, at the emperor and empress of the French while entering the Opera House in Paris, and though they escaped unhurt ten persons were killed and 150 wounded. It was soon discovered that the plot had been hatched in England, and that the bomb had been manufactured there. A strongly worded despatch from the French minister Walewski to Palmerston demanded that he should take steps to restrict the right of asylum in England which was hitherto freely accorded to foreign political malcontents. Addressee of congratulation to the emperor on his escape, which he published in the official 'Moniteur,' threatened England with reprisal. Palmerston ignored Walewski's despatch, but introduced a mild bill making conspiracy to murder, hitherto a misdemeanour, a felony. The step was approved by the queen, but it was denounced as a weak truckling to Palmerston's old friend Napoleon, and his bill was defeated on the second reading (19 Feb.) There-
fall, Febru-
ary 1868
upon he resigned. The queen begged him to reconsider the matter. Although she never derived much comfort from Palmerston, she had great faith in his colleague Clarendon, and it was on his account that she sought to keep the ministry in office; but Palmerston persisted in resigning, and she at once summoned Lord Derby. The queen, although she recognised the parliamentary weakness of a conservative government, was successful in urging him to attempt it. It gratified her that the brother of Sir Robert Peel, General Jonathan Peel, became secretary for war. 'His likeness to his deceased brother,' she wrote, 'in manner, in his way of thinking, and in patriotic feeling, is quite touching.' Friendly relations with France were easily re-established by the new ministry, and the queen was

delighted by the emperor's choice of the eminent General Pélissier, Duc de Malakoff, to represent France at her court in place of Pereigny, who was no favourite. General Pélissier was constantly at court, and was much liked by all the royal family, and when he withdrew, on 5 March 1859, tears were shed on both sides.

In June 1858 the prince consort paid a visit to his daughter and son-in-law in Germany, and on his return the queen, during exceptionally hot weather, which interfered with her comfort, made a royal progress to Birmingham to open the Aston Park. She and the prince stayed with Lord Leigh at Stoneleigh Abbey. The need of maintaining at full heat the French alliance again called them to France in August, when they paid a second visit to Cherbourg. The meeting of the sovereigns bore a somewhat equivocal aspect. The queen in her yacht was accompanied by a great escort of

Visit to
Cherbourg.

men-of-war, while nearly all the ships of the French navy stood by to welcome her. On landing at Cherbourg she joined the emperor in witnessing the formal opening of the new arsenal, and she climbed up the steep fort La Roulle in order to survey the whole extent of the fortifications. The emperor pleasantly reminded the queen that a century before the English fleet had bombarded Cherbourg, but the cordiality between the two appeared unchanged, and the emperor repeated his confidence in the permanence of the Anglo-French alliance; the prince, however, thought the imperial ardour somewhat cooler than of old. From

Tour in
Germany.

France the queen passed to Germany on a visit to her daughter. It was a long and interesting expedition, and she renewed personal intercourse with many friends and kinsmen. She and the prince landed at Antwerp, and at Malines met King Leopold, who travelled with them to Verviers. At Aix-la-Chapelle the prince of Prussia joined them. Thence they travelled to Hanover to visit the king and queen at Herrenhausen, where the queen delighted in the many memorials of her Hanoverian predecessors. Her daughter was residing at the castle of Babelsberg, about three miles from Potsdam, and there she arrived on 13 Aug. In the course of the next few days many visits were paid to Berlin, and the queen inspected the public buildings, the tomb of Frederick the Great, and the royal palaces of Sans Souci and Charlottenberg, and the Neues Palais. On the 27th she left for Cologne, and after a brief visit to places of interest she

arrived at Osborne by way of Antwerp and Dover on the 31st. She and the prince soon left for the north, but they paused on the journey at Leeds to open the new town-hall.

The foreign tour had not withdrawn the queen from important business at home. When she was setting out the country was excited by the completion of the laying of the first submarine cable between America and the United Kingdom, and the queen sent an elaborate message of congratulation over the wires to the president of the United States, James Buchanan. She described the enterprise as an additional link between nations whose friendship was founded upon common interest and reciprocal esteem. Unfortunately the cable soon ceased to work and the permanent connection was not established till 1861. During her stay in Ger-

The re-
settlement
of India.

many, Indian affairs mainly occupied her government's attention. While the mutiny was in course of suppression parliament decided to abolish the old East India Company and to transfer its territories and powers to the crown. India was thenceforth to be administered by a secretary of state assisted by a council of fifteen. The queen set a high value on the new and direct connection which the measure created between India and herself. She felt that it added to the prestige of the monarchy, but in two details the queen deemed the bill to encroach on her prerogative. In the first place, the introduction of competitive examinations for appointments in the new Indian civil service cancelled the crown's power of nomination. In the second place, the Indian army was to be put under the authority of the Indian council. She insisted that her prerogative gave her control of all military forces of the crown through the commander-in-chief exclusively. She laid her objections before Lord Derby with her usual frankness, but the government had pledged itself to the proposed arrangements, and on Lord Derby threatening to resign if the queen pressed the points, she prudently dropped the first and waited for a more opportune moment for renewing discussion on the second. In 1860 it was decided to amalgamate the European forces in India with the home army.

The act for the reorganisation of the Indian government received the royal assent on 2 Aug. 1858. Thereupon Lord Derby's cabinet drafted a proclamation to the people of India defining the principles which would henceforth determine the crown's relations with them. The queen was resolved that her first address to the native population

should plainly set forth her personal interest in its welfare. She had thrown the whole weight of her influence against those who defended indiscriminate retaliatory punishment of the native population for the misdeeds of the mutiny. The governor-general, Lord Canning, who pursued a policy of conciliation, had no more sympathising adherent than the queen. 'The Indian people should know,' she had written to him in December 1857, 'that there is no hatred to a brown skin, none; but the greatest wish on their queen's part to see them happy, contented, and flourishing.' The draft proclamation which was forwarded to her at Babelsberg seemed to assert England's power with needless brusqueness, and was not calculated to conciliate native sentiment. Undeterred by the ill-success which had attended her efforts to modify those provisions in the bill which offended her, she now reminded the prime minister 'that it is a female sovereign who speaks to more than a hundred millions of eastern people on assuming the direct government over them, and after a bloody civil war, giving them pledges which her future reign is to redeem, and explaining the principles of her government. Such a document should breathe the feelings of generosity, benevolence, and religious toleration, and point out the privilege which the Indians will receive in being placed on an equality with the subjects of the British crown, and the prosperity following in the train of civilisation' (MARTIN, iv. 49). She resented her ministers' failure to refer with sympathy to native religion and customs. The deep attachment which she felt to her own religion imposed on her, she said, the obligation of protecting all her subjects in their adherence to their own religious faith. She desired to give expression to her feelings of horror and regret at the mutiny, and her gratitude to God at its approaching end. She desired Lord Derby to rewrite the proclamation in words she described as 'his excellent language.'

The queen never brought her influence to bear on an executive act of government with nobler effect. The second draft, which was warmly approved by the queen, breathed that wise spirit of humanity and toleration which was the best guarantee of the future prosperity of English rule in India. Her suggestion was especially responsible for the magnificent passage in the proclamation the effect of which, from the point of view of both literature and politics, it would be difficult to exaggerate: 'Firmly relying ourselves on the truth of Christianity, and

acknowledging with gratitude the solace of religion, we disclaim alike the right and the desire to impose our convictions on any of our subjects. We declare it to be our royal will and pleasure that none be in any wise favoured, none molested or disquieted by reason of their religious faith or observances, but that all shall alike enjoy the equal and impartial protection of the law; and we do strictly charge and enjoin all those who may be in authority under us that they abstain from all interference with the religious belief or worship of any of our subjects on pain of our highest displeasure.' Finally, the queen recommended the establishment of a new order of the star of India as a decorative reward for those native princes who were loyal to her rule, and such of her officials in the Indian government as rendered conspicuous service. The first investiture took place on 1 Nov. 1861.

In the closing months of 1858 and the opening months of 1859 time forcibly reminded the queen of its passage. On 9 Nov. 1858 the prince of Wales, who had been confirmed on 1 April 1858, completed his eighteenth year. That age in the royal family was equivalent to a majority, and the queen in an admirable letter to her eldest son, while acknowledging that, in the interest of his own welfare, his discipline had been severe, now bade him consider himself his own master; she would always be ready to offer him advice if he wished it, but she would not intrude it. No sooner had she set her eldest son on the road to independence than she welcomed the first birth

of that second generation of her family which before her death was to grow to great dimensions. On 27 Jan. 1859 a son and heir was born at Berlin to the Princess Royal. The child ultimately became the present German emperor William II. For some time the princess's condition caused anxiety to her family, but the crisis happily passed. The queen thus became a grandmother at the age of thirty-nine. Congratulations poured in from every quarter.

Among the earliest and the warmest greetings came one from Napoleon III, and the queen in her acknowledgment took occasion solemnly to urge him to abide in the paths of peace. The persistency with which he continued to increase his armaments had roused a widespread suspicion that he was preparing to emulate the example of his great predecessor. For a time it seemed doubtful in which direction he would aim his first blow. But when the queen's first grandson was born, she knew that her gentle-

spoken ally was about to challenge the peace of Europe by joining the king of Sardinia in an endeavour to expel Austria from Lombardy and Venetia, and thereby to promote the unity of Italy under the kingship of the royal house of Sardinia. The emperor accepted the queen's pacific counsel in good part, but at the same time wrote to her in defence of the proposed war. On 3 Feb. she opened parliament in person and read with emphasis those passages in her speech which declared that England would be no party to the Emperor Napoleon's ambitious designs. Before the end of April the queen's hopes of peace were defeated by the unexpected action of Austria, which, grasping its nettle, declared war on Sardinia. Napoleon at once entered the field with his ally of Italy. The queen and the prince

were harassed by fear of a universal war. Popular feeling in England in regard to the struggle that was in progress was entirely distasteful to them. English public sentiment regarded Sardinia as the courageous challenger of absolutist tyranny. Napoleon was applauded for rendering Sardinia assistance. The queen and the prince, on the other hand, while they deplored Austria's precipitancy, cherished sympathy with her as a German power, whose fortunes appeared to affect immediately those of her neighbour, Prussia.

Affection for her newly married daughter redoubled the queen's desire for the safety of Prussia. Her son-in-law had risen a step nearer the Prussian throne in 1858, when the king, his uncle, had, owing to failing health, been superseded by his father, the prince of Prussia, who became prince-regent. The change of rule greatly increased the influence that Prince Albert could exert on Prussia, for the new ruler was an old friend of his and of the queen, and, having much faith in the prince's judgment, freely appealed to them for confidential counsel. It was now for the prince-regent of Prussia to decide whether the safety of his dominions required him to throw in his lot with Austria. The English court, mainly moved by a desire to protect their daughter from the consequences of strife, besought him to stand aside. He assented, and the queen turned to Napoleon to persuade him to keep hostilities within a narrow compass. When the empress of the French sent her birthday congratulations on 25 May, she in reply entreated her to persuade her husband to localise the war. The prompt triumph of the French arms achieved that result, and, to the queen's relief, although not without

anxiety, she learned that the two emperors were to meet at Villafranca to negotiate terms of peace.

The queen's fears of the sequel were greatly increased by the change of government which took place during the progress of the war. On 1 April Lord Derby's government, which in the main held her views in regard to the foreign situation, was defeated on its reform bill. She declined to accept the ministers' resignation, but assented to the only alternative, dissolution of parliament. The elections passed off quietly, but left the conservatives in a minority of forty-three. On 10 June the ministers were attacked and defeated, and, to the queen's disappointment, she saw herself compelled to accept Lord Derby's resignation. Again Palmerston was the conservative leader's only practicable successor. But it was repugnant to the queen to recall him to power at the existing juncture in foreign politics. His sympathy with Italy and his antipathy to Austria were alike notorious. Lord John Russell, too, had identified himself with Italian interests. On 11 June she therefore invited Lord Granville, a comparatively subordinate member of the party, to extricate her from her difficulties by forming a government. To him she was personally attached, and he was calculated to prove more pliable than his older colleagues. In autograph letters addressed to Palmerston and Lord John, which Granville was charged to deliver, she requested those veterans to serve under him. Her action was mortifying to both, and by accident involved her and them in even more embarrassment than could have been anticipated. Owing to some indiscreet talk of Lord Granville with a friend, a correct report of the queen's conversation with him appeared in the 'Times' next day (12 June). She was in despair. 'Whom am I to trust?' she said; 'these were my own very words.' In the result Palmerston genially agreed to accept Granville's leadership, but Lord John refused to hear of it; and Lord Granville withdrew from the negotiation. The queen was thus compelled to appeal to Palmerston, and to accept him as her prime minister for the second time. Before his ministry was constituted she suffered yet another disappointment. Lord John insisted on taking the foreign office, and, as a consequence, Lord Clarendon, her trusted friend, who had good claims to the post, was excluded from the government.

Her forebodings of difficulties with her new ministers were justified. At the hands of Lord John, as foreign minister, she endured

The queen's anxiety respecting Prussia.

hardly fewer torments than Palmerston had inflicted on her when he held that office.

Differences
with Lord
John on
the Italian
question.

Lord John and his chief at once avowed a resolve to serve the interests of Italy at the expense of Austria, and won, in the inner circle of the court, the sobriquet of 'the old Italian masters.' At the same time the course of the negotiations between Napoleon and the emperor of Austria was perplexing alike to the queen and to her ministers. Napoleon had at Villafranca arranged mysterious terms with the emperor of Austria which seemed to the friends of Italy far too favourable to Austria, although they gave France no advantage. Austria was to lose Lombardy, but was to retain Venetia. France protested unwillingness to take further part in the matter. Sardinia was recommended to rely on her own efforts to obtain whatever other changes she sought in the adjustment of Italy. So barren a result was unsatisfactory to all Italian liberals, and was deemed by Palmerston and Lord John to be grossly unjust to them. They opened diplomatic negotiations with a view to a modification of the proposed treaty, and to the encouragement of the Italians to fight their battle out to the end. The queen, who was relieved by the cessation of hostilities and by the easy terms offered to Austria, stoutly objected to her ministers' intervention. 'We did not protest against the war,' she told Lord John; 'we cannot protest against the peace.' She insisted that the cry 'Italy for the Italians,' if loudly raised by the government, would compel this country to join Sardinia in war. But Palmerston and Lord John were unmoved by her appeals. Palmerston declared that, if their advice were not acted on, their resignations would follow. In August, when the vacation had scattered the ministers, the queen insisted on the whole cabinet being summoned, so that they might realise her unconquerable determination to observe a strict neutrality. Palmerston affected indifference to her persistency, but Italian affairs were suffered to take their own course without English intervention. Yet the outcome was not agreeable to the queen. As soon as the treaty of Villafranca was signed, Sardinia, aided by Garibaldi, sought at the sword's point, without foreign aid, full control of the independent states of the peninsula outside Rome and Venetia. Although she was aware of the weakness of their cause, the queen could not resist sympathy with the petty Italian rulers who were driven by Sardinia from their principalities. The Duchess of Parma, one of the discredited

sovereigns, appealed to the queen for protection. Lord John, whose stolidity in such matters widened the breach between him and the queen, drew up a cold and bald refusal, which she declined to send. Lord Clarendon, however, was on a visit to her at the moment, and by his advice she gave her reply a more sympathetic tone, without openly defying her ministers.

At the same time, with Sardinia's reluctant assent, Napoleon annexed Savoy and Nice to France as the price of his benevolent service to Italy in the past, and by way of a warning that he would tolerate no foreign intrusion while the internal struggle for Italian unity was proceeding. The queen viewed this episode with especial disgust. That Napoleon should benefit from the confusion into which, in her eyes, he had wantonly thrown southern Europe roused her indignation to its full height. She bitterly reproached her ministers, whom she suspected of secret sympathy with him, with playing

Anger with
Napoleon
III.

into his hands. Her complaint was hardly logical, for she had herself urged on them the strictest neutrality. On 5 Feb. 1860 she wrote to Lord John, 'We have been made regular dupes, which the queen apprehended and warned against all along.' Her hope that Europe would stand together to prevent the annexation was unavailing, and she wrathfully exclaimed against maintaining further intercourse with France. 'France,' she wrote to her uncle (8 May 1860), 'must needs disturb every quarter of the globe, and try to make mischief, and set every one by the ears. Of course this will end some day in a general crusade against the universal disturber of the world.' But her wrath cooled, and her future action bore small trace of it. In 1860 the ministry gave her another ground for annoyance by proposing to abolish the post of commander-in-chief, and to bring the army entirely under the control of parliament through the secretary of state. She protested with warmth against the change as an infringement of her prerogative, and for the moment the scheme was dropped.

Apart from political questions her life still knew no cloud. Her public duties continued to bring her into personal relations with the army which were always congenial to her. On 29 Jan. 1859 she opened Wellington College for the sons of officers, an institution of which she had already laid the foundation-stone. On 6 June she once more distributed Victoria crosses. On 26 Aug. she inspected at Portsmouth the 82nd regiment, whence the heroes

Military
ceremonials.

of Lucknow had been drawn. To meet surprises of invasion a volunteer force was called into existence by royal command in May 1859, and to this new branch of the service the queen showed every favour. She held a special levee of 2,500 volunteer officers at St. James's Palace on 7 March 1860, and she reviewed twenty thousand men in Hyde Park on 23 June. Her brother-in-law, Duke Ernest, who accompanied her on the occasion, did not conceal his contempt for the evolutions of her citizen soldiers, but she was earnest in her commendation of their zeal. On 2 July 1860 she personally inaugurated the National Rifle Association, which was a needful complement of the volunteer movement, and in opening its first annual meeting on Wimbledon Common she fired the first shot at the targets from a Whitworth rifle. She at once instituted the queen's prize of the value of 250*l.*, which was awarded annually till the end of her reign. When on the way to Balmoral in August 1860 she stayed at Holyrood in order to review the Scottish volunteer forces.

Domestic life proceeded agreeably. Twice in 1859 her daughter, the Princess Royal, visited her, on the second occasion with her husband. During the autumn sojourn at Balmoral of that year the queen was exceptionally vigorous, making many mountaineering expeditions with her children. The prince consort presided over the meeting of the British Association at Aberdeen in September 1859, and afterwards invited two hundred of the members to be the queen's guests at a highland gathering on Besside. On her way south she opened the Glasgow waterworks at Loch Katrine, and made a tour through the Trossachs. She also paid a visit to Colonel Douglas Penman, M.P., at Porthlyn Castle, near Bangor, and was well received by the workmen at the Loughryne slate quarries. During the season of next year, when she opened parliament in person (24 Jan., 1860), her guests included the king of the Belgians and the young German princes, Louis of Hesse-Darmstadt and his brother. She looked with silent favour on the attentions which Prince Louis paid her second daughter, the Princess Alice, who was now seventeen, and, although she deprecated so early a marriage, awaited the result with interest. At the same time the queen and prince were organising a tour for the prince of Wales through Canada and the United States, which promised well for the good relations of England and the United States. President Buchanan, in a letter to the queen, invited the prince to Washington, an invi-

tation which she accepted in an autograph reply.

In the late autumn of 1860 the royal family paid a second visit to Coburg. A main inducement was to converse once more with Stockmar, who had since 1857 lived there in retirement owing to age and failing health. The queen and the prince were still actively corresponding with him, and were as dependant as ever on his counsel. On 22 Sept., accompanied by Princess Alice and attended by Lord John Russell, they embarked at Gravesend for Antwerp. ^{Second visit} On the journey they were distressed by the intelligence of the ^{1860.} death of the prince consort's step-

mother, with whom they had both cherished a sympathetic intimacy. While passing through Germany they were joined by members of the Prussian royal family, including their son-in-law. At Coburg they met their daughter and her first-born son, with whom his grandmother then made her first acquaintance. On 29 Sept. they removed to Rosenau. Among the guests there was Gustav Freytag, the German novelist, who interested the queen, and described in his reminiscences her 'march-like gait' and affable demeanour (GUSTAV FREYTAG, *Reminiscences*, Eng. Trans. 1890, vol. ii.) On 1 Oct. the prince met with an alarming carriage accident (cf. LORD AUGUSTUS LOFTUS, *Reminiscences*, 1st ser. ii. 89). The queen, though she suppressed her emotion, was gravely perturbed, and by way of thank-offering instituted at Coburg, after her return home, a Victoria-Stift (i.e. foundation), endowing it with 1,000*l.* for the assistance of young men and women beginning life. Happily the prince sustained slight injury, but the nervous depression which followed led his friend Stockmar to remark that he would fall an easy prey to illness. When walking with his brother on the day of his departure (10 Oct.) he completely broke down, and sobbed out that he would never see his native land again (DUKE ERNEST'S *Memoirs*, iv. 55). On the return journey the prince and princess of Prussia entertained the queen and the prince at the palace of Coblenz, where slight illness detained the queen for a few days. Lord John Russell and Baron von Schleinitz, the German minister, spent the time in political discussion, ^{Relations with Prussia.} partly in regard to a trifling incident which was at the moment causing friction between the two countries. An English traveller, Captain Macdonald, had been imprisoned by the mistake of an over-zealous policeman at Bonn. No settlement was reached by Lord John. Afterwards Palmerston used characteristically

strong language in a demand for reparation. A vexatious dispute followed between the two governments, and the queen and the prince were displeased by the manner in which the English ministers handled it. The queen wisely avoided all open expression of opinion, but shrewdly observed that, 'although foreign governments were often violent and arbitrary, our people are apt to give offence and to pay no regard to the laws of the country.' The discussion was gradually dropped, and when, on 2 Jan. 1861, the death of the paralysed Frederick William IV placed the queen's friend, the prince-regent of Prussia, finally on the throne of Prussia as King William I, and her son-in-law and her daughter then became crown prince and princess, the queen believed that friendship between the two countries, as between the two courts, was permanently assured. Her wrath with Napoleon, too, was waning. A private visit to Windsor and Osborne from the Empress Eugénie, who had come in search of health, revived the tie of personal affection that bound her to the queen, and the new year (1861) saw the customary interchange of letters between the queen and Napoleon III. English and French armies had been engaged together in China. But the main burden of the queen's greeting to the emperor was an appeal for peace.

A further source of satisfaction sprang from the second visit which Prince Louis of Hesse paid to Windsor in November 1860, when he formally betrothed himself to Princess Alice (30 Nov.)

Christmas and New Year 1860-1 were kept at Windsor with unusual spirit, although the death of Lord Aberdeen on 14 Dec. was a cause of grief. Among the many guests were both Lord Palmerston and Mr. Disraeli with his wife. The queen and prince had much talk with Disraeli, of whose growing influence they took due account, and they were gratified by his assurance that his followers might be relied on to support a national policy. On more personal questions he was equally complacent. He readily agreed to support the government in granting a dowry of 30,000*l.* and an annuity of 3,000*l.* to Princess Alice on her approaching marriage. On 4 Feb. 1861 the queen opened parliament in person, and herself announced the happy event. It was the last occasion on which she delivered with her own voice the speech from the throne. On 10 Feb. she kept quietly at Buckingham Palace the twenty-first anniversary of her marriage. 'Very few,' she wrote to her uncle Leopold, 'can say with me that their husband at the end of

twenty-one years is not only full of the friendship, kindness, and affection which a truly happy marriage brings with it, but of the same tender love as in the very first days of our marriage.' But death was to destroy the mainspring of her happiness within the year.

The queen passed to the crowning sorrow of her life through a lesser grief, which on its coming tried her severely. On 16 March her mother, who kept her youthful spirit and cheerfulness to the last, and especially delighted in her grandchildren, died at Frogmore after a brief illness. It was the queen's first experience of death in the innermost circle of her family. Princess Alice, who was with her at the moment, first gave proof of that capacity of consolation which she was often afterwards to display in her mother's future trials. Although she was much broken, the queen at once sent the sad news in her own hand to her half-sister, to the princess royal, and to King Leopold. Expressions of sympathy abounded, and the general sentiment was well interpreted by Disraeli, who said in his speech in the House of Commons, in seconding a vote of condolence: 'She who reigns over us has elected, amid all the splendours of empire, to establish her life on the principle of domestic love.'

The duchess's body was laid on 25 March in St. George's Chapel, Windsor. The queen resolved that a special mausoleum should be built at Frogmore for a permanent burial-place, and the remains were removed thither on 17 Aug. The queen's behaviour to all who were in any way dependent on her mother was exemplary. She pensioned her servants; she continued allowances that the Duchess of Kent had made to the Princess Hohenlohe and her sons Victor and Edward Leiningen. To the duchess's lady-in-waiting, Lady Augusta Bruce, sister of Lord Elgin, who had shown great devotion, the queen was herself much attached, and she at once made her her own bed-chamber woman in permanent attendance upon her.

The mourning at court put an end for the time to festivities, and some minor troubles added to the queen's depression. In May, when Prince Louis of Hesse visited Osborne, he fell ill of measles. On 14 July the queen was shocked by news of the attempted assassination at Baden of her friend the king of Prussia. But she gradually resumed the hospitalities and activities of public life. Before the end of the season she entertained the king of the Belgians and the crown prince and princess of Prussia, the king and

Betrothal of
Princess
Alice.

death of Lord Aberdeen on 14 Dec.
was a cause of grief. Among the
many guests were both Lord Pal-

Prince Oscar of Sweden, and the ill-fated Archduke and Archduchess Maximilian.

On 21 Aug. the queen, with the prince consort, the Princesses Alice and Helena, and Prince Arthur, set out from ^{Third visit to Ireland, 1861.} Osborne to pay Ireland a third visit. The immediate inducement was to see the prince of Wales, who was learning regimental duties at the Curragh camp. The royal party travelled by railway from Southampton to Holyhead, and crossed to Kingstown in the royal yacht. The queen took up her residence in the Viceregal Lodge in Phoenix Park on the 22nd. On Saturday the 24th she went to the Curragh to review a force of ten thousand men, among whom her eldest son held a place. On the 26th the queen and her family went south, travelling to Killarney and taking up their residence at Kenmare House. They were received by the people of the district with every mark of enthusiasm. Next day they explored the lakes of Killarney, and removed in the evening to Muckross Abbey, the residence of Mr. Herbert. Among the queen's guests there was James O'Connell, brother of Daniel O'Connell the agitator, with other members of the agitator's family. A stag hunt, which proved abortive, was organised for the enjoyment of the royal party. On the 29th the queen left Killarney for Dublin and Holyhead on her way to Balmoral. Nearly thirty-nine years were to pass before the queen visited Ireland again for the fourth and last time. At Balmoral she occupied herself mainly with outdoor pursuits. On 4 Sept., to her delight, she was joined by her half-sister, the Princess Leiningen, who came on a long visit. Near the end of October, on the journey south, a short halt was made at Edinburgh to enable the prince consort to lay the foundation-stones of a new post office and the industrial museum of Scotland (22 Oct.) Windsor Castle was reached the next morning. This was the last migration of the court which the prince consort was destined to share.

As usual, guests were numerous at Windsor in November, but the deaths of Sir James Graham and of Pedro V of Portugal and his brother Ferdinand damped the spirits of host and hostess. In the middle of November signs that the prince's health was failing became obvious. A year before he had had an attack of English cholera, and he suffered habitually from low fever. Though the queen was solicitous, she, like most persons in robust health, was inclined to take a hopeful view of his condition, and not until the last did she realise that a fatal

issue was impending. A serious political crisis suddenly arose to absorb her attention, and for the last time she, ^{Affair of the Trent.} under her husband's advice, brought personal influences to bear on her ministers in the interests of the country's peace. In April the civil war in America had broken out, and the queen had issued a proclamation of neutrality. Public opinion in England was divided on the merits of the two antagonists, but the mass of the people favoured the confederation of the south. Palmerston, the prime minister, Gladstone, and many of their colleagues made no secret of their faith in the justice of the cause of the south. In November the prevailing sentiment seemed on the point of translating itself into actual war with the north. Two southern envoys, named respectively Mason and Slidell, had been despatched by the southern confederates to plead their cause at the English and French courts. They had run the federals' blockade of the American coast, and, embarking on the Trent, an English steamer, at Havana, set sail in her on 8 Nov. Next day a federal ship-of-war fired at the Trent. The federal captain (Wilkes) boarded her after threatening violence, and captured the confederate envoys with their secretaries. On 27 Nov. the Trent arrived at Southampton, and the news was divulged in England. On 30 Nov. Palmerston forwarded to the queen the draft of a despatch to be forwarded to Washington. In peremptory and uncompromising terms the English government demanded immediate reparation and redress. The strength of Palmerston's language seemed to place any likelihood of an accommodation out of question. The prince consort realised the perils of the situation. He did not share the prime minister's veneration of the southerners, and war with any party in the United States was abhorrent to him. He at once suggested, in behalf of the

queen, gentler phraseology, and ^{Prince Albert's intervention.} in spite of his rapidly developing illness wrote to Lord Palmerston for the queen (1 Dec.) urging him to recast the critical despatch so that it might disavow the belief that the assault on the Trent was the deliberate act of the government of the United States. Let the prime minister assume that an over-zealous officer of the federal fleet had made an unfortunate error which could easily be repaired by 'the restoration of the unfortunate passengers and a suitable apology.' This note to Palmerston 'was the last thing' the prince 'ever wrote,' the queen said afterwards, and it had the effect its author desired. The English

government had a strong case. The emperor of the French, the emperor of Austria, the king of Prussia, and the emperor of Russia expressed themselves in full sympathy with England. But Palmerston and Russell willingly accepted the prince consort's correction. They substituted his moderation for their virulence, with the result that the government of Washington assented cheerfully to their demands. Both in England and America it was acknowledged that a grave disaster was averted by the prince's tact.

But he was never to learn of his victory. He already had a presentiment that he was going to die, and he did not cling to life. He had none of the queen's sanguineness or elasticity of temperament, and of late irremovable gloom had oppressed him. During the early days of December he gradually sank, and on the 14th he passed away unexpectedly in the queen's presence. Almost without warning the romance of the queen's life was changed into a tragedy.

At the time of the prince's death, her daughter Alice and her step-sister the Princess Hohenlohe were with her at Windsor, and all the comfort that kindred could offer they gave her in full measure. Four days after the tragic event she drove with Princess Alice to the gardens at Frogmore, and chose a site for a mausoleum, where she and her husband might both be buried together. Her uncle Leopold took control of her immediate action, and at his bidding she reluctantly removed to Osborne next day. In the course of the 20th she mechanically signed some papers of state. At midnight her brother-in-law, Duke Ernest, reached Osborne, and, dissolved in tears, she at once met him on the staircase. On 28 Dec., in all the panoply of state, the prince's remains were temporarily laid to rest in St. George's Chapel, Windsor. The prince of Wales represented her as chief mourner. Early in January her uncle Leopold came to Osborne to console and counsel her.

No heavier blow than the prince's removal could have fallen on the queen. Rarely was a wife more dependent on a husband. More than fifteen years before she had written to Stockmar (30 July 1846), in reference to a few days' separation from the prince: 'Without him everything loses its interest . . . it will always be a terrible pang for me to separate from him even for two days, and I pray God never to let me survive him.' Now that the permanent separation had come, the future spelt for her desolation. As she wrote on a photograph of a family

group, consisting of herself, her children, and a bust of the prince consort, 'day for her was turned into night' (LADY BLOOMFIELD, ii. 148).

Her tragic fate appealed strongly to the sympathies of her people, who mourned with her through every rank. 'They cannot tell what I have lost,' she said; but she was not indifferent to the mighty outburst of compassion. Personal sympathy with her in her bereavement was not, however, all that she asked. She knew that the exalted estimate she had formed of her husband was not shared by her subjects, and as in his lifetime, so to a greater degree after his death, she yearned for signs that he had won her countrymen's and countrywomen's highest esteem. 'Will they do him justice now?' she cried, as, in company with her friend the Duchess of Sutherland, she looked for the last time on his dead face. Praise of him was her fullest consolation, and happily it was not denied her. The elegiac eulogy with which Tennyson professed his 'Idylls of the King,' within a month of the prince's death, was the manner of salve that best soothed 'her aching, bleeding heart.' The memorials and statues that sprang up in profusion over the land served to illumine the gloom that circled her, and in course of years she found in the task of supervising the compilation of his biography a potent mitigation of grief. Public opinion proved tractable, and ultimately she enjoyed the satisfaction of an almost universal acknowledgment that the prince had worked zealously and honestly for the good of his adopted country.

But, despite the poignancy of her sorrow, and the sense of isolation which thenceforth abode with her, her nerve was never wholly shattered. Naturally and freely as she gave vent to her grief, her was did not degenerate into morbid wailing. One of its most permanent results was to sharpen her sense of sympathy, which had always been keen, with the distresses of others, especially with distresses resembling her own; no widow in the land, in whatever rank of life, had henceforth a more tender sympathiser than the queen. As early as 10 Jan. 1862 she sent a touching message of sympathy with a gift of 200*l.* to the relatives of the victims of a great colliery explosion in Northumberland. In the days following the prince's death, the Princess Alice and Sir Charles Phipps, keeper of her privy purse, acted as intermediaries between her and her ministers, but before the end of the first month her ministers reminded her that she was bound to communicate with them directly. position.

merston at the moment was disabled by gout, and the cabinet was under the somewhat severe and pedantic control of Lord John Russell. The reproof awoke the queen to a sense of her position. Gradually she controlled her anguish, and resigned herself to her fate. She had lost half her existence. Nothing hereafter could be to her what it had once been. No child could fill the place that was vacant. But she did not seek to ease herself of her burden. She steeled herself to bear it alone. Hitherto the prince, she said, had thought for her. Now she would think for herself. His example was to be her guide. The minute care that he had bestowed with her on affairs of state she would bestow. Her decisions would be those that she believed he would have taken. She would seek every advantage that she could derive from the memory of his counsel. Nothing that reminded her of him was disturbed—no room that he inhabited, scarcely a paper that he had handled. The anniversary of his death was henceforth kept as a solemn day of rest and prayer, and the days of his birth, betrothal, and marriage were held in religious veneration. She never ceased to wear mourning for him; she long lived in seclusion, and took no part in court festivities or ceremonial pageantry. Now that the grave had closed over her sole companion and oracle of one-and-twenty years, she felt that a new reign had begun, and must in outward aspect be distinguished from the reign that had closed. But the lessons that the prince had taught her left so deep an impression on her, she clung so tenaciously to his spirit, that her attitude to the business of state and her action in it during the forty years that followed his death bore little outward sign of change from the days when he was perpetually at her side.

V

In the 'two dreadful first years of loneliness' that followed the prince's death the queen lived in complete seclusion, dining often by herself or with her half-sister, and seeing only for any length of time members of her own family. But her widowhood rendered her more dependent than before on her personal attendants, and her intimacy with them gradually grew greater. Of the female members of her household on whose support she rested, the chief was Lady Augusta Bruce, and on her marriage to Dean Stanley on 23 Dec. 1868, congenial successors to Lady Augusta were found in Jane Mar-

Her personal attendants in her widowhood.

chioness of Ely, who had been a lady of the bedchamber since 1857 and filled that office till 30 April 1869, and in Jane Lady Churchill, who was a lady of the bedchamber from 4 July 1854 and remained in attendance on the queen till her sudden death on Christmas day 1900—less than a month before the queen herself died. Even from the lower ranks of her household she welcomed sympathy and proofs of personal attachment. She found Scotsmen and Scotswomen of all classes, but especially of the humbler, readier in the expression of kindly feeling than Englishmen and Englishwomen. When she paid, in May 1862, the first painful visit of her widowhood to Balmoral, her reception was a real solace to her. Her Scottish chaplain, Dr. Norman Macleod, gave her more real consolation than any clergyman of the south. She found a satisfaction in employing Scots men and women in her domestic service. John Brown, a son of a farmer on her highland estate, had been an outdoor servant at Balmoral since 1849, and had won the regard of the prince and herself. She soon made him a personal retainer, to be in constant attendance upon her in all the migrations of the court. He was of rugged exterior and uncourtly manners, but she believed in his devotion to her and in his strong common sense, and she willingly pardoned in him the familiarity of speech and manner which old servants are in the habit of acquiring. She took all his brothers into her service, and came to regard him as one of her truest friends. In official business she derived invaluable assistance in the early years of her widowhood from those who were filling more dignified positions in her household. The old objections to the appointment of a private secretary to the queen, now that the prince who had acted in that capacity was no more, were not revived, and it was at once conferred without debate on General the Hon. Charles Grey, a younger son of the second Earl Grey, who had been since 1816 private secretary to the prince, and whose sister, Lady Caroline Barrington, was since 1851 the governess of the royal children. Some differences of opinion were held outside court circles as to his tact and judgment, but until his death in 1870 his devotion to his work relieved the queen of much pressing anxiety. She also reposed full confidence in Sir Charles Phipps, keeper of the privy purse, who died in 1866, and in Sir Thomas Biddulph, who was master of her household from 1861, and after 1867 sole keeper of the privy purse until his death in 1878. No three men could have served her more single-mindedly than Grey, Phipps,

and Biddulph. She was especially fortunate, too, in General Sir Henry Ponsonby, Grey's successor as private secretary, who, as equerry to the prince consort, had been brought within the sphere of influence which the queen deemed the best inspiration for her advisers. Sir Henry remained her secretary for the long period of a quarter of a century—8 April 1870 to May 1895, when he was succeeded by her last private secretary, Colonel Sir Arthur Bigge. Outside her household she derived much benefit from the counsel of Gerald Wellesley, son of Lord Cowley, and nephew of the Duke of Wellington, who had been her domestic chaplain since 1849, and was dean of Windsor from 1864 until his death in 1882. She was often in consultation with him, particularly in regard to the church appointments which her ministers suggested to her. In one direction only did the queen relieve herself of any of her official work on the prince's death. It had been her custom to sign (in three places) every commission issued to officers in all branches of the military service, but she had fallen into arrears with the labour of late years, and sixteen thousand documents now awaited her signature. In March 1862 a bill was introduced into parliament enabling commissions to be issued without bearing her autograph, though her right of signing was reserved in case she wished to resume the practice, as she subsequently did.

Her signature to officers' commissions.

Public business, in accordance with her resolve, occupied her almost as soon as her husband was buried. On 9 Jan. 1862 she received the welcome news that the authorities at Washington had solved the difficulty of the Trent by acceding to the requests of the English government. She reminded Lord Palmerston that 'this peaceful issue of the American quarrel was greatly owing to her beloved prince,' and Palmerston considerably replied that the alterations in the despatch were only one of innumerable instances 'of the tact and judgment and the power of nice discrimination which excited Lord Palmerston's constant and unbounded admiration.' A day or two later she assented to Palmerston's proposal to confer the garter on Lord Russell, though she would not hear of a chapter of the order being held, and insisted on conferring the distinction by warrant. On 11 Jan. she presided over a meeting of her privy council.

Two plans of domestic interest which the prince had initiated she at once carried to completion. It had been arranged that the prince of Wales should make a tour to

the Holy Land with Dr. A. P. Stanley, the late prince's chaplain. In January 1862 the queen finally settled the tour with Stanley, who visited her at Osborne for the purpose, and from 6 Feb. till 14 June her eldest son was absent from her on the expedition. There was some inevitable delay in the solemnisation of the marriage of Princess Alice, but it was quietly celebrated at Osborne on 1 July. The queen was present in deep mourning. Her brother-in-law, the Duke of Saxe-Coburg, gave the princess away. The queen felt acutely the separation from the daughter who had chiefly stood by her in her recent trial.

During the autumn visit to Balmoral (21 Aug. 1862) the queen laid the foundations of a cairn 'to the beloved memory of Albert the Great and Good, Prince Consort, raised by his broken-hearted widow.' She and the six children who were with her placed on it stones on which their initials were to be carved. Next month (September 1862) negotiations were in progress for the betrothal of the prince of Wales.

His choice had fallen on Princess Alexandra, daughter of Prince Christian of Schleswig-Holstein-Sonderburg-Glücksburg, the next heir to the throne of Denmark, to which he ascended shortly afterwards on 15 Nov. 1863. Her mother, Princess Louise of Hesse-Cassel, was niece of Christian VIII of Denmark, and sole heiress of the old Danish royal family. Princess Alexandra was already a distant connection of the queen by marriage, for the queen's aunt, the old Duchess of Cambridge, a member of the princely house of Hesse-Cassel, was also aunt of the princess's father. The queen readily assented to the match, and the princess was her guest at Osborne in November. Her grace and beauty fascinated the queen and the people of England from the first, and although the princess's connection with Denmark did not recommend the alliance to the Prussian government, which anticipated complications with its little northern neighbour, the betrothal had little political significance or influence.

More perplexing was the consideration which it was needful to devote in December 1862 to a question affecting the future of her second son, Alfred, who, under the prince consort's careful supervision, had

been educated for the navy. The popular assembly of the kingdom of Greece had driven their king, Otto, from the throne, and resolved to confer the vacant crown on Prince Alfred,

Princess Alice's marriage.

Betrothal of prince of Wales.

The throne of Greece.

The queen regarded the proposal with unconcealed favour, but her ministers declared its acceptance to be impracticable and to be contrary to the country's treaty obligations with the powers. Unhappily for the queen's peace of mind, the ministers' rejection of the invitation to her second son, in which she soon acquiesced, did not relieve her of further debate on the subject. A substitute for Alfred as a candidate for the Greek throne was suggested in the person of her brother-in-law, Duke Ernest of Saxe-Coburg. He at once came to England to take the queen's advice, and his conduct greatly harassed her. His attitude to the question threatened a breach between them. The duke had no children, and his throne of Saxe-Coburg would naturally devolve, should he die childless, on his only brother's eldest son, the prince of Wales; but it had already been agreed that, in view of the prince of Wales's heirship to the English throne, he should transfer to his next brother Alfred his claim to the German duchy. Duke Ernest was quite willing to ascend the Greek throne, but made it a condition that he should not immediately on his accession sever his connection with Coburg. This condition was treated as impossible of acceptance, alike by English ministers and by Greek leaders. For the duke to abandon Coburg meant its immediate assignment to Prince Alfred. Of this result the queen, who was deeply attached to the principality and was always solicitous of the future fortunes of her younger children, by no means disapproved. But it was congenial neither to Duke Ernest nor to their uncle Leopold, and the duke thought his sister-in-law's action ambiguous and insufficiently considerate towards his own interests. She endeavoured to soothe him, while rescuting his pertinacious criticism, and on 29 Jan. 1863 she wrote to him: 'What I can do to remove difficulties, without prejudicing the rights of our children and the welfare of the beloved little country, you may rely upon. You are sure of my sisterly love, as well as my immense love for Coburg and the whole country. . . . I am not at all well, and this whole Greek matter has affected me fearfully. Much too much rests upon me, poor woman, standing alone as I do with so many children, and every day, every hour, I feel more and more the horrible void that is ever growing greater and more fearful' (DUKE ERNEST, iv. 99-100). Finally the duke's candidature for the Greek throne was withdrawn, and the crown was placed by England, in concert with the powers, on the head of George, brother of the Princess Alexandra, who was

the affianced bride of the prince of Wales. The settlement freed the queen from the worry of family bickerings.

Through all the ranks of the nation the marriage of the queen's eldest son, the heir to the throne, evoked abundant enthusiasm. There was an anticipation that the queen would make it the occasion of ending the period of gloomy seclusion in which she had chosen to encircle the court. At her request parliament readily granted an annuity of 40,000*l.* for the prince, which, added to the revenues of the duchy of Cornwall, brought his income to over 100,000*l.* a year, while his bride was awarded an immediate annuity of 10,000*l.* and a prospective one of 30,000*l.* in case of widowhood. In accordance with the marriage treaty, which was signed at Copenhagen on 15 Jan. 1863, the marriage took place on 5 March 1863 at St. George's Chapel, Windsor. The queen played no part in the ceremony, but witnessed it from a gallery overlooking the Marriage of the prince of situation impressed so unsentimental a spectator as Lord Palmerston, who shed tears as he gazed on her. After the prince's marriage the court resumed some of its old routine; state balls and concerts were revived to a small extent, but the queen disappointed expectation by refusing to attend court entertainments herself. She entrusted her place in them to her eldest son and his bride, and to others of her children.

But while ignoring the pleasures of the court, she did not relax her devotion to the business of state. Her main energy was applied to foreign politics. While anxious that the prestige of England should be maintained abroad, she was desirous to keep the peace, and to impress other sovereigns with her pacific example. Her dislike of war in Europe now mainly sprang from family considerations—from her concern for the interests of her married daughters at Berlin and Darmstadt, and in a smaller degree for those of her brother-in-law at Coburg. The fortune of all, and especially those of the crown princes of Prussia, seemed to her to be involved in every menace of the tranquillity of Europe. Into the precise merits of the difficulties which arose among the nations she did not enter with quite the same fulness as her husband. But the safety of existing dynasties was a principle that had appealed to him, and by that she stood firm. Consequently the points of view from which she and her ministers, Lord Palmerston and Lord John Russell, approached the foreign questions that en-

crossed the attention of Europe from 1863 to 1866 rarely coincided. But she pressed counsel on them with all her old pertinacity, and constantly had to acquiesce unwillingly in its rejection in detail. Nevertheless she fulfilled her main purpose of keeping her country free from such European complications as were likely to issue in war. And though she was unable to give effective political aid to her German relatives, she was often successful in checking the activity of her ministers' or her people's sympathies with their enemies.

The different mental attitudes in which the queen and her ministers stood to current foreign events is well illustrated by the divergent sentiments which the Polish insurrection excited in them in 1863. Palmerston and his colleague Lord John sympathised with the efforts of Poland to release itself from the grip of Russia, and their abhorrence of the persecution of a small race by a great reflected popular English feeling. France, affecting horror at Russia's cruelty, invited English co-operation in opposing her. Prussia, on the other hand, which Bismarck now ruled, declared that the Poles were meeting their deserts. The queen sternly warned her government against any manner of interference. Her view of the situation altogether ignored the grievances of the Poles. She privately identified herself with their oppressors. The Grand Duke Constantine,

The Polish insurrection.

who was governor-general of Poland when the insurrection broke out, had been her guest. His life was menaced by the Polish rebels, wherefore his mode of tyranny, however repugnant, became in her sight inevitable weapons of self-defence. The question had driven France and Prussia into opposite camps. Maternal duty called her to the side of Prussia, her eldest daughter's adopted country and future dominion.

Early in the autumn of 1863 the queen visited Germany and examined the foreign situation for herself at close quarters. The main object of her tour was to revive her memories of the scenes of her late husband's youth. After staying a night at the summer palace of Laeken with her uncle Leopold, she proceeded to Rosenau, Prince Albert's birthplace, and thence passed on to Coburg. This recent death of her husband's constant counsellor, Stockmar, at Coburg, intensified the depression in which public and private anxieties involved her, but she took pleasure in the society of the crown princes and princess, who joined her at Rosenau. Their political pro-

spects, however, filled her with fresh alarms. The sovereigns of Germany were meeting at Frankfort to consider a reform of the confederation of the German states. For reasons that were to appear later, Prussia declined to join the meeting, and Austria assumed the leading place in the conference. It looked probable that an empire of Germany would come into being under the headship of the emperor of Austria, that Prussia would be excluded from it, and would be ruined in its helpless isolation. The jealousy with which not only Austria, but the smaller German states, regarded Prussia seemed to the queen to render imminent its decay and fall. Domestic instincts spurred her to exert all her personal influence in Germany to set the future of Prussia and her daughter's fortunes on a securer basis. Her brother-in-law, Duke Ernest, was attending the German diet of sovereigns at Frankfort. From Rosenau she addressed to him constant appeals to protect Prussia from the disasters with which the Frankfort meeting threatened it. On 29 Aug., after drawing a dismal picture of Prussia's rapid decline, she wrote: 'All the more would I beg you,

as much as lies in your power, to prevent a weakening of Prussia, which not only my own feeling resists—on account of the future of our children—but which would surely also be contrary to the interest of Germany; and I know that our dear angel Albert always regarded a strong Prussia as a necessity, for which therefore it is a sacred duty for me to work.' Two days later, on 31 Aug., the king of Prussia, at her request, paid her a visit. Bismarck, who had a year before assumed control of the policy of Prussia and understood the situation better than the queen, was in his master's retinue, but he was not present at the interview. The king's kindly tone did not reassure the queen. She thought he failed to realise his country's and his family's danger. But his apparent pusillanimity did not daunt her energies. A personal explanation with the ruler, from whom Prussia had, in her view, everything to fear, became essential. Early in September Francis Joseph, the emperor of Austria, was returning to Vienna from the diet at Frankfort. She invited him to visit her on the way at the castle of Coburg. On 3 Sept. he arrived there. It was her first meeting with him. She had been interested in him since his accession to the throne in the eventful year 1848. Ten years later, in August 1858, he had sent to her when at Babelsberg a letter re-

Her de-pair of Prussia.

Visit to Coburg.

Interview with the emperor of Austria.

greeting his inability to make her personal acquaintance while she was in the neighbourhood of his dominions; and when his son and heir was born a day or two later, on 22 Aug. 1858, she at once wrote a cordial note of congratulation. Now his interview with her lasted three hours. Only Duke Ernest was present with them. The queen prudently deprecated the notion that she desired to enter in detail into political questions, but her maternal anxiety for her children at Berlin impelled her (she said) to leave no stone unturned to stave off the dangers that threatened Prussia. She knew how greatly Prussia would benefit if she won a sympathetic hearing from the emperor. He heard her respectfully, but committed himself to nothing, and the interview left the situation unchanged (DUKE ERNEST, *Memoirs*, iv. 134). But the interest of the episode cannot be measured by its material result. It is a signal proof of the queen's courageous will and passionate devotion to her family.

Soon after parting with Emperor Francis Joseph, the queen set her face homewards, only pausing at Darmstadt to see her daughter Alice in her own home. Arrived in England, she paid her customary autumn visit to Balmoral, and spent some days in September with her friends the Duke and Duchess of Athol at Blair Athol. Afterwards she temporarily issued from her seclusion in order to unveil publicly at Aberdeen, on 13 Oct. 1863, a bronze statue of the prince consort, which Marochetti had

Prince consort's statue unveiled at Aberdeen.

designed at the expense of the city and county. In reply to the address from the subscribers the queen declared through Sir George Grey, the home secretary, that she had come 'to proclaim in public the unbounded reverence and admiration, the devoted love that fills my heart for him whose loss must throw a lasting gloom over all my future life.' The occasion was one of severe and painful trial to her; but it proved the first of numerous occasions on which she presided over a like ceremony. She welcomed the multiplication of statues of the late prince with such warmth that by degrees, as Gladstone said, they 'covered the land.'

Before the end of the year (1863) there broke out the struggle in central Europe which the conflicting claims of Germany and Denmark to the duchies of Schleswig-Holstein had long threatened. English ministers and the queen had always kept the question well in view. In 1852 a conference

The Schleswig-Holstein question.

in London of representatives of the various parties had arranged, under the English government's guidance, a compromise, whereby the relation of the duchies to Germany and Denmark was so defined as to preserve peace for eleven years. The Dances held them under German supervision. But in the course of 1863 Frederick VII of Denmark asserted new claims on the disputed territory. Although he died just before he gave effect to his intentions, his successor, the prince of Wales's father, Christian IX, at once fully accepted his policy. Opinion in Germany, while at one in its hostility to Denmark and in its deliberate resolve henceforth to exclude her from the duchies, ran in two sharply divided currents in regard to their future status and their relation to Germany. In 1852 Denmark had bought off a German claimant to the duchies in the person of Duke Christian of Schleswig-Holstein-Sonderburg-Augustenburg, but his son Duke Frederick declined to be bound by the bargain, and had, in 1863, reasserted an alleged hereditary right to the territory, with the enthusiastic concurrence of the smaller German states and of a liberal minority in Prussia. Two of Duke Frederick's adherents, the kings of Saxony and Hanover, actually sent troops to drive the Danes from Kiel, the chief city of Holstein, in December 1863, and to put him in possession. The government of Prussia, on the other hand, was indifferent to Duke Frederick's pretensions, and anticipating embarrassment from co-operation with the small German states, it took the matter entirely out of their hands. The king of Prussia induced the emperor of Austria to join him exclusively in expelling the Danes from the two duchies, and it was agreed that the two powers, having overcome the Danes, should hold the territories jointly until some final arrangement was reached. There were thus three parties to the dispute—the king of Denmark, Duke Frederick of Augustenburg with his German champions, and the rulers of Prussia and Austria.

Two of the three litigants, the king of Denmark and Duke Frederick, each claimed for the queen's support and the intervention of English arms. The queen, who narrowly watched the progress of events and surprised ministers at home and envoys from abroad with the minuteness and accuracy of her knowledge, was gravely disturbed. Her sympathies were naturally German and anti-Danish; but between the two sections of German opinion she somewhat hesitated. Duke Frederick was the husband of the daughter of her half-sister Feodora, and she

The queen's divided interests.

had entertained him at Windsor. The crown prince of Prussia was his close friend, and his cause was also espoused by the queen's daughter Alice and her husband, Prince Louis of Hesse, as well as by her brother-in-law, Duke Ernest of Saxo-Coburg. But while regarding with benevolence the pretensions of Duke Frederick of Augustenburg, and pitying the misfortunes of his family, she could not repress the thought that the policy of Prussia, although antagonistic to his interests, was calculated to increase the strength and prestige of that kingdom, the promotion of which was for her 'a sacred duty.'

There were other grounds which impelled her to restrain her impulse to identify herself completely with any one party to the strife. Radical divergences of opinion were alive in her own domestic circle. The princess of Wales, the daughter of the king of Denmark, naturally felt acutely her father's position, and when, in December 1863, she and her husband were fellow-guests at Windsor with the crown prince and princess of Prussia, the queen treated Schleswig-Holstein as a forbidden subject at her table. To her ministers and to the mass of her subjects, moreover, the cause of Denmark made a strong appeal. The threats of Prussia and Austria to attack a small power like Denmark seemed to them another instance of brutal oppression of the weak by the strong. Duke Frederick's position was deemed futile. The popularity of the princess of Wales, the king of Denmark's daughter, tended to strengthen the prevailing popular sentiment in favour of the Danes.

In view of interests so widely divided the queen hoped against hope that peace might be preserved. At any rate she was resolved that England should not directly engage in the strife, which she wished to see restricted to the narrowest possible limits of time and space. It was therefore with deep indignation that she learned that active interference in behalf of Denmark was contemplated by her cabinet. Napoleon III was sounded as to whether he would lend his aid, but he had grown estranged from Palmerston, and answered coldly. The ministers' ardour in behalf of Denmark was not diminished by this rebuff. But the queen's repugnance to their Danish sentiment was strengthened. She made no endeavour to conceal her German sympathies, although they became, to her regret, the subject of reproachful comment in the press. Theodor von Bernhardt, the Prussian envoy, had an interview with her at Osborne on 8 Jan. 1864. She frankly deplored the strength of the Danish party

in England, which had won, she said, the leading journalistic organs. She thought that Germany might exert more influence in the same direction. She was dissatisfied, she added, with the position of the crown prince, and lamented the depressed condition of the liberal party in Prussia (BERNHARDT, *Aus dem Leben*, 1895, pt. v. 276-81). At the same time she turned a deaf ear to the urgent appeals of Duke Frederick's friends for material assistance. Within a few hours of her interview with Bernhardt she wrote to her brother-in-law at Coburg that she had come to see with her government that Duke Frederick's claim was unworkable. 'All my endeavours and those of my government,' she said, 'are only directed towards the preservation of peace.' When her ministers introduced what she regarded as bellicose expressions into the queen's speech at the opening of parliament (4 Feb. 1864), she insisted on their removal.

A more critical stage was reached in the same month, when hostilities actually broke out between Austria and Prussia on the one hand and Denmark on the other. Although the Danes fought bravely, they were soon defeated, and the English government, with the assent of the queen, urged on the belligerents not merely an armistice,

The London conference. but a conference in London, so that an accommodation might be reached and the war abridged. The conference met on 20 April. The queen saw many of the envoys and talked to them with freedom. She recommended mutual concessions. But it was soon seen that the conference would prove abortive. To the queen's annoyance, before it dissolved, her government championed with new vehemence the cause of the Danes, and warlike operations in their behalf were again threatened. Palmerston told the Austrian ambassador, Count Apponyi, that if the Austrian fleet went to the Baltic it would meet the British fleet there. The queen, through Lord Granville, expressed dissatisfaction with the threat, and appealed to the cabinet to aid her against the prime minister. She invited the private support of the leader of the opposition, Lord Derby, in the service of peace, and hinted that, if parliament did not adopt a pacific and neutral policy, she would have resort to a dissolution. Meanwhile her German relatives complained to her of the encouragement that her ministers and subjects were giving the Danes. But in her foreign correspondence, as the situation developed, she displayed scrupulous tact. She deprecated the rumours that she and her ministers were

Queen's real for neutrality.

pulling in opposite directions, or that she had it in her power to take a course to which they were adverse. In May the London conference broke up without arriving at any decision. The war was resumed in June with triumphant results to the German allies, who quickly routed the Danes and occupied the whole of the disputed duchies. Throughout these operations England maintained the strictest neutrality, the full credit of which was laid in diplomatic circles at the queen's door (cf. DUKE ERNEST'S *Memoirs*; COUNT VON BRUNN'S *Memoirs*; COUNT VITZTHUM VON ECKSTADT'S *Memoirs*.)

Much of this agitation waged round the princess of Wales, and while it was at its height a new interest was aroused in her. On 8 Jan. 1864 she became, at Frogmore, the mother of a son (Albert Victor), who was in the direct line of succession to the throne. The happy event, which gave the queen, in the heat of the political anxiety, much gratification, was soon followed by her first public appearance in London since her bereavement. On 30 March she attended a flower show at the Horticultural Gardens, while she permitted her birthday on 24 May to be celebrated for the first time since her widowhood with state formalities. In the autumn Duke Ernest and his wife were her guests at Balmoral, and German politics continued to be warmly debated. But she mainly devoted her time to recreation. She made, as of old, many excursions in the neighbourhood of her highland home. For the second time in Scotland she unveiled a statue of the prince consort, now at Perth; and on her return to Windsor she paid a private visit to her late husband's foundation of Wellington College.

A feeling was growing throughout the country that the queen's seclusion was unduly prolonged, and was con-

Complaints of the queen's seclusion.

trary to the nation's interest. It was not within the knowledge of the majority of her subjects that she was performing the routine business of her station with all her ancient pertinacity, and she had never failed to give public signs of interest in social and non-political questions affecting the people's welfare. On New Year's Day 1865 she, on her own responsibility, addressed a letter to railway companies, calling their attention to the frequency of accidents, and to their responsibilities for making better provision for the safety of their passengers. In London, in March, she visited the Consumption Hospital at Brompton. The assassination of President Lincoln on 14 April called forth all her sympathy, and she at once sent to the president's widow

an autograph letter of condolence, which excited enthusiasm on both sides of the Atlantic, and did much to relieve the tension that English sympathy with the Southern confederates had introduced into the relations of the governments of London and Washington. But it was obvious at the same time that she was neglecting the ceremonial functions of her office. On three occasions she had failed to open parliament in person. That ceremony most effectually brought into prominence the place of the sovereign in the constitution; it was greatly valued by ministers, and had in the past been rarely omitted. William IV, who had excused his attendance at the opening of parliament in 1837 on the ground of the illness of his sister, the Duchess of Gloucester, had been warned that his absence contravened a principle of the constitution; and Lord Melbourne, the prime minister, wrote to Lord John Russell that that was the first occasion in the history of the country on which a sovereign had failed to present himself at the opening of parliament, except in cases of personal illness or infirmity (WATFORD'S *Russell*, i. 275). The queen was known to be in the enjoyment of good health, and, despite her sorrow, had regained some of her native cheerfulness. When, therefore, early in 1865 the rumour spread that she would resume her place on the throne at the opening of parliament, signs of popular satisfaction abounded. But she did not come, and the disappointment intensified popular discontent. Radicals, who had no enthusiasm for the monarchical principle, began to argue that the cost of the crown was out of all proportion to its practical use. On 28 Sept. 1865 a cartoon in 'Punch' portrayed the queen as the statue of Hermione in Shakespeare's 'Winter's Tale,' and Britannia figuring as Paulina was represented as addressing to her the words: 'Tis time; descend; be stone no more' (v. iii. 90). On the other hand, chivalrous defenders pointed to the natural womanly sentiment which explained and justified her retirement. In the first number of the 'Pall Mall Gazette,' which appeared on 7 Feb. 1865, the day of the opening of the new parliament, the first article, headed 'The Queen's Seclusion,' sympathetically sought to stem the tide of censure. Similarly at a great liberal meeting at St. James's Hall on 4 Dec. 1866, after Mr. A. S. Ayrton, member of parliament for the Tower Hamlets, had denounced the queen in no sparing terms, John Bright, who was present, brought his eloquence to her defence and said: 'I am not accustomed to stand up in defence of those who

John Bright's defence of her.

are the possessors of crowns. But I think there has been, by many persons, a great injustice done to the queen in reference to her desolate and widowed position; and I venture to say this, that a woman, be she the queen of a great realm, or be she the wife of one of your labouring men, who can keep alive in her heart a great sorrow for the lost object of her life and affection, is not at all likely to be wanting in a great and generous sympathy with you.' Mr. Ayrton endeavoured to explain his words, but was refused a hearing. Nevertheless the agitation was unrepressed. A year later there was a revival of the rumour that court life was to resume its former brilliance under the queen's personal auspices. Unmoved by the popular outcry, she peremptorily denied the truth of the report in a communication to the 'Times' newspaper. She said 'she would not shrink from any personal sacrifice or exertion, however painful. She had worked hard in the public service to the injury of her health and strength. The fatigue of mere state ceremonies, which could be equally well performed by other members of the royal family, she was unable to undergo. She would do what she could—in the manner least trying to her health, strength, and spirits—to meet the loyal wishes of her subjects; to afford that support and countenance to society, and to give that encouragement to trade, which was desired of her. More the queen could not do, and more the kindness and good feeling of her people would surely not exact of her.'

In the autumn of 1865 domestic matters largely occupied her. Accompanied by her family, she paid another visit to her husband's native country, in order to unveil, in the presence of all his relatives, a statue to him at Coburg (26 Aug.) While at Coburg she approved a matrimonial project affecting her third and eldest unmarried daughter, Helena, who had of late years been her constant companion. In view of recent events in Germany the match was calculated strongly to excite political feeling there. Largely at the instance of Duke Ernest, the princess was betrothed to Prince Christian of Schleswig-Holstein-Sonderburg-Augustenburg, the younger brother of that Duke Frederick whose claim to the duchies of Schleswig and Holstein had been pressed by the smaller German states on Denmark and on the Prussian-Austrian alliances with results disastrous to himself. After the recent Schleswig-Holstein war Bismarck had deprived Duke Frederick and his family of their property and standing, and the claimant's

Her refusal to leave her retirement.

Betrothal of the Princess Helena.

younger brother, Prince Christian, who had previously been an officer in the Prussian army, had been compelled to retire. The sympathy felt by the crown prince and princess for the injured house of Augustenburg rendered the match congenial to them; but it was viewed with no favour at Berlin, and the queen was freely reproached there with a wanton interference in the domestic affairs of Germany. She unmistakably identified herself with the arrangement, and by her private munificence met the difficulty incident to the narrow pecuniary resources of the young prince. She returned to England in good health and spirits, meeting at Ostend her uncle Leopold for what proved to be the last time.

Events in the autumn unfortunately reinvigorated her sense of isolation. In the summer of 1865 a dissolution of parliament had become necessary, and the liberals slightly increased their majority in the new House of Commons. But, before the new parliament met, the death of

Death of Palmerston

Palmerston, the prime minister, on 18 Oct., broke for the queen another link with the past. In the presence of death the queen magnanimously forgot all the trials that the minister had caused her. She only felt, she said, how one by one her servants and ministers were taken from her. She acknowledged the admiration which Lord Palmerston's acts, even those that met with her disapproval, had roused in his fellow-countrymen, and, justly interpreting public sentiment, she directed that a public funeral should be accorded him. She afterwards paid Lady Palmerston a touching visit of condolence. Without hesitation she turned to Lord John, the oldest minister in her service, who in 1861 had gone to the House of Lords as Earl Russell, and bade him take Palmerston's place. The change was rendered grateful to her by the bestowal of the office of foreign secretary, which Lord Russell had hitherto held, on her trusted friend, Lord Clarendon. But at the same time Gladstone, the chancellor of the exchequer, became leader of the House of Commons in succession to Palmerston, and she was thus for the first time brought into close personal relations with one who was to play a larger part in her subsequent career than proved congenial to her. On 10 Dec. the queen suffered another loss, which brought her acute sorrow—the death of King

Leopold. She had depended on him almost since her birth for advice on both public and private questions. There was no member of the Saxe-Coburg family, of which she was herself

practically the head henceforth, who could take her uncle's place. Her brother-in-law Ernest, who was vain and quixotic, looked up to her for counsel, and in his judgment she put little faith. In her family circle it was now, more than before, on herself alone that she had to rely.

The forthcoming marriages of Princess Helena coincided with the coming of age of her second son, Prince Alfred. For her son and daughter the queen was anxious that due pecuniary provision should be made by parliament. This circumstance, coupled with the fact that a new parliament was assembling, led her to yield to the request of her ministers and onco more, after an interval of five years, open the legislature in person (10 Feb. 1866). She came to London from Windsor only for the day, and she deprived the ceremony of much of its ancient splendour. No flourish of trumpets announced her entrance. The

gilded state carriage was replaced by one of more modern build, though it was drawn as of old by the eight cream-coloured horses. The queen, instead of wearing the royal robes of state, had them laid on a chair at her side, and her speech was read not by herself, as had been her habit hitherto, but by the lord chancellor. The old procedure was never restored by the queen, and on the six subsequent occasions that she opened parliament before the close of her reign, the formalities followed the now precedent of 1866. She was dressed in black, wearing a Marie Stuart cap and the blue riband of the garter. During the ceremony she sat perfectly motionless, and manifested little consciousness of what was proceeding. A month later she showed the direction that her thoughts were always taking by instituting the Albert medal, a new decoration for those endangering their lives in seeking to rescue others from perils of the sea (7 March 1866).

Later in the year she, for the first time after the prince's death, revisited Aldershot, going there twice to review troops—on 13 March and on 5 April. On the second occasion she gave new colours to the 89th regiment, which she had first honoured thus in 1838, and she now bestowed on the regiment the title 'The Princess Victoria's Regiment,' permitting the officers to wear on their forage caps the badge of a princess's coronet.

This summer was brightened by two marriages. Not only her daughter Helena but her cousin and friend, Princess Mary of Cambridge, had recently become engaged. The latter was betrothed to the Duke of Teck, who was congenial to the queen by

reason of his Saxe-Coburg connections. He was her second cousin, being the son, by a morganatic marriage, of Duke Alexander Constantine of Wurtemberg, whose mother, of the Saxe-Coburg family, was elder sister of the Duchess of Kent, and thus the queen's aunt. On 12 June, dressed in deep black, she was present at Princess Mary's wedding, which took place at Kew. On 5 July she attended the solemnisation of marriage at Windsor of her third daughter, Helena, with Prince Christian of Schleswig-Holstein.

Parliament had been conciliatory in the matter of grants to her children. Princess Helena received a dowry of 30,000*l.* and an annuity of 6,000*l.*, while Prince Alfred received an annuity of 15,000*l.*, to be raised to 25,000*l.* in case of his marriage. There was no opposition to either arrangement. But throughout the session the position of the government and the course of affairs in Germany filled the queen with alarm. It was clear that the disputes between Prussia and Austria in regard to the final allotment of the conquered duchies of Schleswig-Holstein were to issue in a desperate con-

War between Austria and Prussia. Not otherwise could their long rivalry for the headship of the German states be finally decided. The prospect of war caused the queen acute distress. The merits of the quarrels were blurred in her eyes by domestic considerations. The struggle hopelessly divided her family in Germany. The crown prince was wholly identified with Prussia, but her son-in-law of Hesse, her cousin of Hanover, and her brother-in-law of Saxe-Coburg were supporters of Austria. The likelihood that her two sons-in-law of Prussia and Hesse would fight against each other was especially alarming to her. Her former desire to see Prussia strong and self-reliant was now in conflict with her fear that Prussian predominance meant ruin for all the smaller states of Germany, to which she was personally attached. In the early months of 1866 she eagerly consulted Lord Clarendon with a view to learning how best to apply her influence to the maintenance of peace. She bade Lord Russell, the prime minister, take every step to prevent war; and in March 1866 her ministry, with her assent, proposed to the king of Prussia that she should act as mediator. Bismarck, however, brusquely declined her advances. Her perplexities were increased in May by her government's domestic difficulties. Lord Russell warned her of the probable defeat of the government on the reform bill, which they had lately introduced into the

House of Commons. The queen had already acknowledged the desirability of a prompt settlement of the long-debated extension of the franchise. She had even told Lord Russell that vacillation or indifference respecting it on the government's part, now that the question was in the air, weakened the power of the crown. But the continental complication reduced a home political question to small dimensions in the queen's eye. She declined to recognise a reform bill as a matter of the first importance, and she wrote with some heat to Lord Russell that, whatever happened to his franchise proposals in the commons, she would permit no resignation of the ministers until the foreign crisis was passed. Her ministers begged her to remain at Windsor in May instead of paying her usual spring visit to Balmoral. She declined, with the remark that they were bound at all hazards to avert a ministerial crisis. In June the worst happened, alike at home and abroad. War was declared between Prussia and Austria, and Lord Russell's government was defeated while its reform bill was in committee in the House of Commons. On 19 June Lord Russell forwarded

Disputes with Lord Russell. his resignation to Balmoral and deprecated dissolution. The queen wrote protesting that she was taken completely by surprise. 'In the present state of Europe,' she said, 'and the apathy which Lord Russell himself admits to exist in the country on the subject of reform, the queen cannot think it consistent with the duty which the ministers owe to herself and the country that they should abandon their posts in consequence of their defeat on a matter of detail (not of principle) in a question which can never be settled unless all sides are prepared to make concessions; and she must therefore ask them to reconsider their decision' (WALPOLE, *Lord John Russell*, ii. 415). Lord Russell retorted that his continuance in office was impracticable, and with his retirement he in effect ended his long public life. The queen in her anger regarded his withdrawal as amounting to desertion, and, failing to hasten her departure from Balmoral, suffered the government for some days to lie in abeyance. At length the conservative leader, Lord Derby, accepted her request to form a new ministry, with Disraeli as chancellor of the exchequer and leader of the House of Commons (8 July 1866).

Meanwhile the Austro-Prussian war was waging in Germany, and many of the queen's relatives were in the field, the crown prince alone fighting for Prussia, the rest supporting Austria. She was in constant communica-

tion with her kindred on the two sides, and her anxiety was intense. She took charge of the children of Princess Alice of Hesse-Darmstadt, and sent her at Darmstadt much linen for the wounded. The result was not long in doubt. At the outset, the rapid invasion of Hanover by Prussian troops drove the queen's cousin the king from his throne, and blotted out the kingdom, converting it into a Prussian province. The queen felt bitterly the humiliation of the dissolution of a kingdom which had long been identified with England. She made urgent inquiries after the safety of the expelled royal family of Hanover. The king, who was blind, made his residence at Paris, and in the welfare of him and of his family, especially of his daughter Frederica, whom she called 'the poor lily of Hanover,' her affectionate interest never waned. Elsewhere Prussia's triumph in the war was as quickly assured, and the queen suffered more disappointments. Italy had joined Prussia against Austria. Austria was summarily deprived of Venetia, her last hold on the Italian peninsula, and the union of Italy under Victor Emanuel—a project with which the queen had no sympathy—was virtually accomplished. The Austrians were decisively defeated at the battle at Sadowa near Koniggratz on 3 July 1866, and the conflict was at an end seven weeks after it had begun. Thus Prussia was finally placed at the head of the whols of North Germany; its accession to an imperial crown of Germany was in sight, and Austria was compelled to retire from the German confederation. It was with mixed feelings that the queen saw her early hopes of a strong Prussia realised. The price of the victory was abolition of the kingdom of Hanover, loss of territory for her son-in-law of Hesse-Darmstadt, and reduction of power and dignity for the other small German states with which she was lineally associated.

The queen's withdrawal to the quiet of Balmoral in October gave welcome relief after such severe political strains. She repeated a short sojourn, which she had made the year before, with the lately widowed Duchess of Athol, a lady of the bed-chamber, at Dunkeld, and she opened the Aberdeen waterworks at Invercarnie (18 Oct. 1866), when for the first time in her widowhood she herself read the answer to the address of the lord provost. Another public ceremonial in which she took part after her return south revealed the vast store of loyalty which, despite detraction and criticism, the queen still had at her command. On 30 Nov.

The queen at Wolverhampton.

she visited Wolverhampton to unveil a statue of the prince consort in the market-place. She expressed a desire that her route should be so arranged as to give the inhabitants, both poor and rich, full opportunities of showing their respect. A network of streets measuring a course of nearly three miles was traversed. The queen acknowledged that 'the heartiness and cordiality of the reception' left nothing to be desired, and her spirits rose.

But the perpetuation of her husband's memory was still a main endeavour of her life, and she now enlisted biography in her service. Under her direction her private secretary, General Grey, completed in 1866 a very minute account of the early years of the prince consort. She designed the volume, which was based on confidential and intimate correspondence, and only brought the prince's life to the date of his marriage, for private distribution among friends and relatives. But in 1867 she placed the book at the disposal of the wider audience of the general public. The work was well received. At the queen's request Wilkes reviewed it in the 'Quarterly.' He described it as a cry from the queen's heart for her people's sympathy, and he said that her cry was answered (WILKES, *ibid.*, iii. 230). The queen resolved that the biography should be continued, and on General Grey's death in May 1870 she entrusted the task, on the recommendation of Sir Arthur Helps, clerk of the council, to Sir Arthur's friend, (Sir) Theodore Martin. Much of her time was thenceforth devoted to the sorting of her and her husband's private papers and correspondence, and to the selection of extracts for publication. Sir Theodore Martin's work was designed on an ample scale, the first volume appearing in 1874, and the fifth and last in 1880. Amazement was felt even by her own children at the want of reserve which characterised the prince's biography. 'The whole truth best vindicated him,' she explained, and it was undesirable to wait before telling it till those who had known him had passed away. The German side of his character, which alienated sympathy in his lifetime, could only be apprehended in a full exposition. Both she and he would suffer, she said, were the work not carried through (*Princess Alice's Letters*, pp. 333-5). At the same time she deprecated indiscretion or levity in writing of the royal family, and in 1874 she was greatly irritated by the publication of the first part of the 'Greville Memoirs.' She judged the work, by its freedom of comment on

her predecessors, to be disrespectful to the monarchy. Henry Reeve, the editor, was informed of her displeasure, and she was not convinced by his defence that monarchy had been injured by George IV's depravity and William IV's absurdity, and had only been placed on a sure footing by her own virtues (LAWSON, *Memoir of Henry Reeve*). To illustrate the happy character of her married life, she privately issued in 1867 some extracts from her diary under the title of 'Leaves from a Journal of our Life in the Highlands from 1848 to 1861.' This, too, she was induced to publish at the beginning of the following year (1868). Its unaffected simplicity and naïveté greatly attracted the public, who saw in the book, with its frank descriptions of her private life, proof of her wish to share her joys and sorrows with her people. A second part followed in 1869, covering the years 1862 to 1862.

The year 1867 abounded in political incidents which absorbed the queen's attention. With her new conservative ministers her relations were invariably cordial. Their views on foreign politics were mainly identical with her own, and there was none of the tension which had marked her relations with Palmerston and Lord Russell in that direction. As proof of the harmony existing between her advisers and herself, she consented to open parliament in person on 6 Feb. In May she again appeared in public, when she laid the foundation of the Royal Albert Hall, which was erected in her husband's memory. Her voice, in replying to the address of welcome, was scarcely audible. It had been with a struggle, she said, that she had nerved herself to take part in the proceedings.

The chief event of the year in domestic politics was the passage of Disraeli's reform bill through parliament. The queen encouraged the government to settle the question. Although she had no enthusiasm for sweeping reforms, her old whig training inclined her to regard extensions of the franchise as favourable to the monarchy and to the foundations of her government.

But foreign affairs still appealed to her more strongly than home legislation. The European sky had not grown clear, despite the storms of the previous year. The queen was particularly perturbed in the early months of 1867 by renewed fear of her former ally, Napoleon III. Although her personal correspondence with him was still as amiable as of old, her distrust of his political intentions was greater than ever, and she

The biography of the prince consort.

Disraeli's reform bill.

always believed him to be secretly fomenting serious disquiet. He now professed to detect a menace to France in the semi-independence of the frontier state—the duchy of Luxembourg—seeing that the new conditions which Prussian predominance created in north Germany gave that power the right to fortify the duchy on its French border. He therefore negotiated with the suzerain of the duchy, the king of Holland, for its annexation to his own dominions, or he was willing to see it annexed to Belgium if some small strip of Belgian territory were assigned to him. Prussia raised protests and Belgium declined his suggestion. The queen urgently appealed to her government to keep the peace, and her appeal had its effect. A conference met in London (11–14 May 1867) with the result that the independence of the duchy of Luxembourg was guaranteed by the powers, though its fortresses were to be dismantled. Napoleon was disappointed by his failure to secure any material advantage from the settlement, and he was inclined to credit the queen with thwarting his ambition.

His relations with her endured a further strain next month when his fatal abandonment in Mexico of her friend and connection, the Archduke Maximilian, became known. In 1864 Napoleon had managed to persuade the archduke, the Austrian emperor's brother, who had married the queen's first cousin, Princess Charlotte of Belgium, and had frequently been the queen's guest, to accept the imperial throne which a French army was setting up in republican Mexico. Few of the inhabitants of the country acknowledged the title of the new emperor, and in 1868, after the close of the American civil war, the government at Washington warned Napoleon that, unless his troops were summarily withdrawn from the North American continent, force would be used to expel them. The emperor pusillanimously offered no resistance to the demand, and the French army was withdrawn, but the archduke declined to leave with it. His wife, Princess Charlotte of Belgium, as soon as she realised her husband's peril, came to Europe to beg protection for him, and to the queen's lasting sorrow her anxieties permanently affected her intellect. Meanwhile the inhabitants of Mexico restored the republic, and the archduke was shot by order of a court-martial on 20 June 1867. The catastrophe appalled the queen, whose personal attachment to its victims was great. She wrote a frank letter of condolence to the archduke's brother, the emperor of Austria,

leon III.

and for the time spoke of Napoleon as politically past redemption. But she still cherished private affection for the empress of the French, and privately entertained her as her guest at Osborne in July. Nor, when misfortune overtook the emperor himself in 1870, did she permit her repugnance to his political action to repress her sense of compassion.

While the Mexican tragedy was nearing its last scene the second great exhibition was taking place at Paris, and Napoleon III, despite the universal suspicion that he excited, succeeded in entertaining many royal personages—among them the tsar Alexander II, the king of Prussia, Abdul Aziz, sultan of Turkey, Ismail Pasha, khedive of Egypt, and the prince of Wales. The queen's ministers recommended that she should renew the old hospitalities of her court and invite the royal visitors in Paris to be her guests. The queen of Prussia had spent several days with her in June, but she demurred to acting as hostess in state on a large scale. She however agreed, with a view to confirming her influence in Eastern Europe, to entertain Abdul Aziz, the sultan of Turkey, and to receive Ismail Pasha, the khedive of Egypt, who had announced his intention of coming, and was in the country from 6 to 18 July. No sultan of

The sultan's
visit, 1867.

Turkey had yet set foot on English soil, and the visit, which seemed to set the seal on the old political alliance between the two governments, evoked intense popular excitement. The sultan was magnificently received on his arrival on 12 July, and was lodged in Buckingham Palace. Though the queen took as small a part as possible in the festivities, she did not withdraw herself altogether from them. Princess Alice helped her in extending hospitalities to her guest, who lunched with her at Windsor and highly commended her attentions. A great naval review by the queen at Spithead was arranged in his honour, and he accompanied his hostess on board her yacht, the *Victoria* and *Albert*. The weather was bad, and amid a howling storm the queen invested the sultan with the order of the garter on the yacht's deck. When the sultan left on 23 July he exchanged with her highly complimentary telegrams.

At Balmoral, in the autumn, she showed more than her usual energy. On her way thither she made an excursion in the Scottish border country, staying for two days with the Duke and Duchess of Roxburgh at Floors Castle, near Kelso (21 to 23 Aug.) On the 22nd she visited Melrose Abbey,

and thence proceeded to Abbotsford, where she was received by Mr. Hope Scott, and was greatly interested in the memorials of Sir Walter Scott. In the study, at her host's request, she wrote her name in Scott's journal, an act of which she wrote in her diary: 'I felt it to be a presumption in me to do.' Subsequently she unveiled with some formality a memorial to the Prince Albert at Deeside, and visited the Duke of Richmond at Glenfiddich (24-7 Sept.)

Early in 1868 she accepted, for the seventh time in her experience, a new prime minister, and one with whom her intimacy was to be greater than with any of his six predecessors. In February Lord Derby resigned owing to failing health. The choice of a successor lay

Disraeli
prime
minister,
1868

between Disraeli and Lord Derby's son, Lord Stanley. Disraeli's steady work for his party for a quarter of a century seemed to entitle him to the great reward, and the queen without any hesitation conferred it on him. Her relations with him had been steadily improving. Though she acknowledged that he was eccentric, his efforts to please her convinced her of his devotion to the crown. As her prime minister Disraeli from the first confirmed her good opinion of him, and by the adroitness of his counsel increased her sense of power and dignity. But his power in parliament was insecure, and she was soon brought face to face with a ministerial crisis in which he contrived that she should play not unwillingly an unwontedly prominent part.

In April Gladstone brought forward his first and main resolution in favour of the disestablishment of the Irish church. The government resisted him, and on 1 May was sharply defeated by a majority of sixty-five. Next day Disraeli went to Windsor and tendered his resignation to the queen. Personally the queen disliked Gladstone's proposal. She regarded the established church throughout her dominions as intimately associated with the crown, and interference with it seemed to her to impair her prerogative. But as a constitutional sovereign she realised that the future of the church establishment in Ireland or elsewhere was no matter for her own decision; it was for the decision of her parliament and people. In the present emergency she desired the people to have full time in which to make up their minds regarding the fate of the Irish church. If she accepted Disraeli's resignation she would be compelled to confer office on Gladstone, and her government would be committed to Irish disestablish-

ment. Disraeli pointed out that she could at least defer the evil moment by declining to accept his resignation and by dissolving parliament. An immediate dissolution was undesirable if the appeal were to be made, as all parties wished, to the new constituencies which had been created by the late reform bill. The Scottish and Irish reform bills and the boundary bills which were required to complete that measure had yet to pass through their final stages. Consequently the queen's refusal to accept the existing government's resignation meant its continuance in office during the six months which were needed before all the arrangements for the appeal to the newly enfranchised electors could be accomplished. If the opposition failed to keep the government in power during that period, it ran the risk, in the present temper of the sovereign, of provoking a dissolution before the new electoral reform was consummated. Disraeli, while explaining the situation to the queen, left her to choose between the two possible alternatives, the acceptance of his resignation now and the appeal to the country six months later. After two days' consideration, she elected to take the second course. She

parliament
at will.

was prepared to accept full responsibility for her decision, and when Disraeli announced it to parliament on 5 May he described, with her assent, the general drift of his negotiations with her. Grave doubts were expressed in the House of Commons as to whether his conduct was consistent with that of the ministerial adviser of a constitutional sovereign. In his first conversation with the queen he had acted on his own initiative, and had not consulted his colleagues. This self-reliance somewhat damped enthusiasm for his action in the ranks of his own party. The leaders of the opposition boldly argued that the minister was bound to offer the sovereign definite advice, which it behoved her to adopt, that the constitution recognised no power in the sovereign to exercise personal volition, and that the minister was faithless to his trust in offering her two courses and abiding by her voluntary selection of one. But the argument against the minister was pushed too far. The queen had repeatedly exerted a personal choice between accepting a dissolution and a resignation of a ministry in face of an adverse vote in the House of Commons. The only new feature that the present situation offered was Disraeli's open attribution to the queen of responsibility for the final decision. The net effect of his procedure was to bring into clearer relief than before the practi-

cal ascendancy, within certain limits, which under the constitution a ministerial crisis assured the crown, if its wearer cared to assert it. The revelation was in the main to the advantage of the prestige of the throne. It conflicted with the constitutional fallacy that the monarch was necessarily and invariably an automaton. But the queen had no intention of exceeding her constitutional power, and when, immediately after the settlement of the ministerial difficulty, the House of Commons, by an irresistible vote of the opposition, petitioned her to suspend new appointments in the Irish church in the crown's control, and to place royal patronage at the parliament's disposal, she did not permit any personal predilections to postpone her assent for a day.

On 10 March 1868 the queen, for the first time since her widowhood, held a drawing-room at Buckingham Palace. On 20 June she reviewed twenty-seven thousand volunteers in Windsor Park, and two days later gave a public 'breakfast' or afternoon party in the gardens of Buckingham Palace. She appeared to observers to enjoy the entertainment, but she had no intention of introducing any change into her habitually secluded mode of life. By way of illustrating her desire to escape from court functions, she in August paid a first visit to Switzerland, travelling incognito under the name of the Countess of Kent. She forbade any public demonstration in her honour, but accepted the Emperor Napoleon's courteous offer of his imperial train in which to travel through France. On the outward journey she rested for a day at the English embassy in Paris, where the Empress Eugénie paid her an informal visit (6 Aug.) Next day she reached Lucerne, where she had rented the Villa

First visit to
Switzerland.

Pension Wallace near the lake. She stayed there, engaged in the recreations of a private pleasure-seeker, till 9 Sept., when she again passed through France in the emperor's train. She paused at Paris on 10 Sept. to revisit St. Cloud, which revived sad memories of her happy sojourn there thirteen years before. The emperor was absent, but courteous greetings by telegraph passed between him and the queen. Removing, on her arrival in England, to Balmoral, she there gave additional proof of her anxiety to shrink from publicity or court formality. She took up her residence for the first time in a small house, called Glassalt Shiel, which she had built in a wild deserted spot in the hills. She regarded the dwelling as in all ways in keeping with her condition. 'It was,' she wrote, 'the widow's first house, not

built by *him*, or hallowed by *his* memory.' On 14 Dec. 1868 a special service was held in her presence at the Frogmore mausoleum, where a permanent sarcophagus had now been placed. It was destined to hold her own remains as well as those of the prince. The whole cost of the completed mausoleum was 200,000*l*.

While she was still in Scotland the general election took place, and Disraeli's government suffered a crushing defeat. The liberals came in with a majority of 128, and Disraeli, contrary to precedent, resigned office without waiting for the meeting of parliament. His last official act excited a passing difference of opinion with the queen, and showed how actively she asserted her authority even in her relation to a minister with whose general policy she was in agreement. The archbishopric of Canterbury became vacant on 28 Oct., owing to the death of Archbishop Longley. The queen at her own instance recommended for the post Archibald Campbell Tait, bishop of London, in whom she had long taken a personal interest. Disraeli had another candidate. But the queen persisted; Disraeli yielded, and Tait received the primacy. He was the first archbishop of Canterbury with whom she maintained a personal intimacy. Neither with Archbishop Howley, who held office at her accession, nor his successors, Archbishops Sumner and Longley, had she sought a close association. Disraeli's experience in regard to the appointment of Tait was not uncommon with preceding or succeeding prime ministers. Throughout her reign the queen took a serious view of her personal responsibilities in the distribution of church patronage; and though she always received her ministers' advice with respect, she did not confine herself to criticism of their favoured candidates for church promotion; she often insisted on other arrangements than they suggested. In 1845 she refused to accept Sir Robert Peel's recommendation of Buckland for the deanery of Westminster, and conferred the post on a personal acquaintance, Samuel Wilberforce. Subsequently Dean Stanley owed the same benefice to the queen's personal regard for him. To the choice of bishops she attached an 'immense importance,' and the principles that in her view ought to govern their selection were sound and statesmanlike. She deprecated the display of religious or political partisanship in the matter. 'The men to be chosen,' she wrote to Archbishop Benson, 3 Jan. 1890, 'must not be taken with reference to satisfying one or the other party in the church,

or with reference to any political party, but for their real worth. We want people who can be firm and conciliating, else the church cannot be maintained. We want large broad views, or the difficulties will be insurmountable.' While holding such wise views, she was not uninfluenced by her personal likes or dislikes of individuals, and she would rather fill an ecclesiastical office with one who was already agreeably known to her than with a stranger. She was always an attentive hearer of sermons and a shrewd critic of them. She chiefly admired in them simplicity and brevity. Any failure of a preacher to satisfy her judgment commonly proved a fatal bar to his preferment. She was tolerant of almost all religious opinions, and respected those from which she differed; only the extreme views and practices of ritualists irritated her. She was proud of her connection with the presbyterian establishment of Scotland, and, without bestowing much attention on the theology peculiar to it, enjoyed its unadorned services, and the homely exhortations of its ministers.

On Disraeli's resignation the queen at once sent for Gladstone, and he for the first

Gladstone prime minister, 1868. time became her prime minister in December 1868. Although she fully recognised his abilities, and he always treated her personally with deferential courtesy, he did not inspire her with sympathy or confidence. Her political intuitions were not illiberal, but the liberalism to which she clung was confined to the old whig principle of religious toleration and the personal liberty of the subject. She deprecated change in the great institutions of government, especially in the army; the obliteration of class distinctions was for her an idle dream. Radicalism she judged to be a dangerous compromise with the forces of revolution; the theory that England had little or no concern with European politics, and no title to exert influence on their course, conflicted with her training and the domestic sentiment that came of her foreign family connections. The mutability of Gladstone's political views, and their tendency to move in the direction which the queen regarded as unsafe, tried her nerves. During Gladstone's first ministry he and his colleagues undertook a larger number of legislative reforms than any government had essayed during her reign, and the obligation which she felt to be imposed on her of studying the arguments in their favour often overtaxed her strength. New questions arose with such rapidity that she complained that she had not the time wherein to form a

judgment. Gladstone, who was unwearied in his efforts to meet her protests or inquiries, had not the faculty of brevity in exposition. His intellectual energy, his vehemence in argument, the steady flow of his vigorous language, tormented her. With perfectly constitutional correctness she acknowledged herself powerless to enforce her opinion against his; but she made no secret of her private reluctance to approve his proposals. Gladstone's social accomplishments, moreover, were not of a kind calculated to conciliate the queen in intercourse outside official business, or to compensate for the divergences between their political points of view. The topics which absorbed him in his private life were far removed from the queen's sphere of knowledge or interest. Some of Gladstone's colleagues in his first ministry were, however, entirely congenial to her. She was already on friendly terms with Lord Granville, the colonial secretary, and with the Duke of Argyll, the Indian secretary, and she had long placed implicit confidence in Lord Clarendon, who now resumed the post of foreign secretary.

The first measures which Gladstone as prime minister introduced was the long-threatened bill for the disestablishment of the Irish church. Her views on the Irish church bill. She avowed vehement dislike of it, and talked openly of her sorrow that Gladstone should have started 'this about the Irish church' (*WILKINSON'S Life*, iii. 97). In the correspondence with her daughter Alice she argued that the question would 'be neither solved nor settled in this way. Injustice to protestants might come of it. The settlement was not well considered.' She told Gladstone how deeply she 'deplored the necessity under which he conceived himself to be of raising the question as he had done,' and how unable she was to divert herself of apprehensions as to the possible consequences. But she was under no illusion as to Gladstone's resolve and power to pass the bill through parliament. She frankly admitted that the House of Commons had been 'chosen expressly to speak the feeling of the country on the question,' and she believed that if a second appeal were made to the electorate it would produce the same result. Common sense taught her that the quicker the inevitable pill was swallowed the better for the country's peace. But she saw that a fruitless and perilous resistance was threatened by the House of Lords. In this previous session they had thrown out the bill suspending further appointments in the Irish church which Gladstone had carried through the House of Commons, and

Tait, then bishop of London, had voted with the majority. A collision between the two houses always seemed to the queen to shake the constitution, and she knew that in a case like the present the upper house must invite defeat in the conflict. She therefore, on her own initiative, proposed to mediate between the government and the House of Lords. Gladstone welcomed her intervention, and was conciliatory.

Accordingly, the day before parliament opened, 15 Feb. 1860, the queen asked Tait whether the House of Lords could not be persuaded to give way. Gladstone, she said, 'seems really moderate.' The principle of disestablishment must be conceded, but the details might well be the subject

Her appeal
to the lords.

of future discussion and negotiation. At her request Tait and Gladstone met in consultation.

After the bill had passed through the House of Commons with enormous majorities (31 May), she importuned Tait to secure the second reading in the lords, with the result that it was carried by 33 (18 June). But greater efforts on the queen's part were required before the crisis was at an end. The amendments adopted by the lords were for the most part rejected by Gladstone. On 11 June the queen pressed on both sides the need of concessions, and strongly deprecated a continuance of the struggle. At length the government gave way on certain subsidiary points, and the bill passed safely its last stages (*Life of Tait*, ii. passim). How much of the result was due to the queen's interference, and how much to the stress of events, may be matter for argument; but there is no disputing that throughout this episode she oiled the wheels of the constitutional machinery.

During this anxious period the queen's public activities were mainly limited to a review of troops at Aldershot on 17 April. On 25 May she celebrated quietly her fiftieth birthday, and at the end of June entertained for a second time the khedive of Egypt. On 28 June she gave a 'breakfast' or afternoon party in his honour at Buckingham Palace—the main festivity in which she took part during the season. In the course of her autumn visit to Balmoral she went on a tour through the Trossachs and visited Loch Lomond. Towards the end of the year, 6 Nov., she made one of her rare passages through London, and the first since her widowhood. She opened Blackfriars Bridge and Holborn Viaduct, but she came from Windsor only for the day.

The queen occasionally sought at this period a new form of relaxation in inter-

course with some of the men of letters whose fame contributed to the glory of her reign. Her personal interest in

literature was not strong, and it diminished in her later years;

but she respected its producers and their influence. With Tennyson, whose work her husband had admired, and whose 'In Memoriam' gave her much comfort in her grief, she was already in intimate correspondence, which she maintained till his death; and when he visited her at Windsor and Osborne she treated him with the utmost confidence. Through her friends, Sir Arthur Helps and Dean Stanley, she had come to hear much of other great living writers. Lady Augusta Stanley told her of Carlyle, and she sent him a message of condolence on the sudden death of his wife in 1866.

In May 1869 the queen visited the Westminster deanery mainly to make Carlyle's personal acquaintance. 'The Stanleys' guests also included Mr. and Mrs. Grote, Sir Charles and Lady Lyell, and the poet Browning. The queen was in a most gracious humour. Carlyle deemed it 'impossible to imagine a politer little woman: nothing the least imperious; all gentle, all sincere . . . makes you feel too (if you have any sense in you) that she is queen' (Froude, *Carlyle in London*, ii. 373-80). She told Browning that she admired his wife's poetry (Rieu, *Lord Houghton*, ii. 200). Among the novels she had lately read was George Eliot's 'Mill on the Floss,' but Dickens's work was the only fiction of the day that really attracted her. In him, too, she manifested personal interest. She had attended in 1857 a performance by himself and other amateurs of Wilkie Collins's 'The Frozen Deep' at the Gallery of Illustration, and some proposals, which came to nothing, had been made to him to read the 'Christmas Carol' at court in 1858. At the sale of Thackeray's property in 1864 she purchased for 25*l.* 10*s.* the copy of the 'Christmas Carol' which Dickens had presented to Thackeray. In March 1870 Dickens, at Helps's request, lent her some photographs of scenes in the American civil war, and she took the opportunity that she had long sought of making his personal acquaintance. She summoned him to Buckingham Palace in order to thank him for his courtesy. On his departure she asked him to present her with copies of his writings, and handed him a copy of her 'Leaves' with the autograph inscription, 'From the humblest of writers to one of the greatest.' Other writers of whom she thought highly included Dr. Samuel Smiles, whose 'Lives of the Engineers' she presented to her son-

in-law of Hesse-Darmstadt in 1865, and whose 'Life of Thomas Edward, the Banff Naturalist,' she examined in 1876 with such effect as to direct the bestowal on Edward of a civil list pension of 50*l*. She was interested, too, in the works of George MacDonald, on whom she induced Lord Beaconsfield to confer a pension in 1877.

In 1870 European politics once more formed the most serious topic of the queen's thought, and the death in July of her old friend, Lord Clarendon, the foreign secretary, increased her anxieties. Despite her personal attachment to Lord Granville, who succeeded to Clarendon's post, she had far smaller faith in his political judgment. Although she watched events with attention, the queen

The Franco-German war.

was hopeful until the last that the struggle between France and Germany, which had long threatened, might be averted. In private letters to the rulers of both countries she constantly counselled peace; but her efforts were vain, and in July 1870 Napoleon declared war. She regarded his action as wholly unjustified, and her indignation grew when Bismarck revealed designs that Napoleon was alleged to have formed to destroy the independence of Belgium, a country in whose fortunes she was deeply concerned by reason of the domestic ties that linked her with its ruler. In the opening stages of the conflict that followed her ruling instincts identified her fully with the cause of Germany. Both her sons-in-law, the crown prince and Prince Louis of Hesse-Darmstadt, were in the field, and through official bulletins and the general information that her daughters collected for her, she studied their movements with painful eagerness. She sent

Her sympathy with Germany.

hospital stores to her daughter at Darmstadt, and encouraged her in her exertions in behalf of the wounded. When crushing disaster befell the French arms she regarded their defeat as a righteous judgment. She warmly approved a sermon preached before her by her friend, Dr. Norman Macleod, at Balmoral on 2 Oct. 1870, in which he implicitly described France as 'reaping the reward of her wickedness and vanity and sensuality' (*More Leaves*, p. 161). But many of her subjects sympathised with France, and her own tenderness of heart evoked pity for her

Her pity for France.

French neighbours in the completeness of their overthrow. With a view to relieve their sufferings, she entertained her daughter the crown princess, her son-in-law the crown prince, and her friend and his mother the queen of Prussia to avert the calamity of the bombardment of Paris.

Bismarck bitterly complained that 'the petticoat sentimentality' which the queen communicated to the Prussian royal family hampered the fulfilment of German designs. The crown prince's unconcealed devotion to her compromised him in the eyes of Bismarck, who deprecated her son-in-law's faith in her genuine attachment to German interests (see the prince's 'Diary,' edited by Professor Tefken, in *Deutsche Rundschau*, 1888). Nor did the queen refrain from pressing her ministers to offer her mediation with the object not merely of bringing the war to an early close, but of modifying the vindictive terms which Germany sought to impose on France. But her endeavours were of small avail. English influence was declining in the councils of Europe. Russia had made the preoccupation of France and Germany the occasion for breaking this clause in the treaty of Paris which excluded Russian warships from the Black Sea. And this defiant act was acquiesced in by Gladstone's government. Yet the queen's efforts for France were well appreciated there. Some years later (3 Dec. 1874) she accepted, with sympathetic grace, at Windsor an address of thanks, to which she replied in French, from representatives of the French nation, for the charitable services rendered by English men and women during the war; the elaborate volumes of photographs illustrating the campaign, which accompanied the address, she placed in the British Museum.

Hatred of Napoleon's policy did not estrange her compassion from him in the ruin that overtook him and his family. The Empress Eugénie fled to England in September 1870, and took up her residence at Chiswick. The queen at once sent her a kindly welcome, and on 30 Nov. paid her a long visit, which the exile returned at Windsor on 5 Dec. Thenceforth their friendship was unbroken. When Napoleon, on his release from a German prison, joined his wife in March 1871, the queen lost no time in visiting him at Chislehurst, and until his death on 9 Jan. 1873 openly showed her fellow-feeling with him in his melancholy fate.

The course that domestic affairs were taking during 1870 was hardly more agreeable to her than the course of foreign affairs. In April the attempt by a Fenian to assassinate Prince Alfred while on a visit at Port Jackson, New South Wales, greatly disturbed her, but happily the prince recovered; and she had no reason to doubt the genuineness of public sympathy which was given her in full measure. At home

she was mainly troubled by the government's resolve to begin the reorganisation of the army, which had been long contemplated. The first step taken by Cardwell, the secretary of state for war, was to subordinate the office of commander-in-chief to his own. Twice before the queen had successfully resisted or postponed a like proposal. She regarded it as an encroachment on the royal prerogative. Through the commander-in-

Dislike of
Cardwell's
army
reforms.

chief she claimed that the crown directly controlled the army without the intervention of ministers or parliament; but her ministers now proved resolute, and she, on 28 June 1870, signed an order in council which deposed the commander-in-chief from his place of sole and immediate dependence on the crown (*Hansard*, ccii. 10 sq.; *Parl. Papers*, 1870, c. 164). Next session the government scheme for reorganising the army was pushed forward in a bill for the abolition of promotion by purchase which passed through the House of Commons by large majorities. In the House of Lords the Duke of Richmond carried resolutions which meant the ruin of the measure. Characteristically, the queen deprecated a conflict between the houses, but the government extricated her and themselves from that peril by a bold device which embarrassed her. They advised her to accomplish their reform by exercise of her own authority without further endeavour to win the approval of the upper house. The purchase of commissions had been legalised not by statute, but by royal warrant, which could be abrogated by the sovereign on the advice of her ministers without express sanction of parliament. In the special circumstances the procedure violently strained the power of the prerogative against one branch of the legislature, and the queen accepted the ministerial counsel with mixed feelings. She had small sympathy with the proposed reform, and feared to estrange the House of Lords from the crown by procedure which circumvented its authority; but the assertion of the prerogative was never ungrateful to her, and the responsibility for her action was her minister's.

Despite her industrious pursuit of public business, the mass of the people continued to deplore the infrequency of her public appearances; of the only two public ceremonies in which she engaged to take part in 1870, she fulfilled no more than one. She opened (11 May 1870) the new buildings of London University at Burlington House; but, to the general disappointment, indisposition led her to delegate to the prince of Wales the open-

ing of so notable a London improvement as the Thames Embankment (13 July 1870). The feeling of discontent was somewhat checked by the announcement in October that she had assented to the engagement of her fourth daughter, Princess Louise, with a subject, and one who was in the eye of the law a commoner. The princess had given her hand at Balmoral to the Marquis of Lorne, eldest son of the Duke of Argyll. It was the first time in English history that the sovereign sanctioned the union of a

Marriage of
Princess
Louise

princess with one who was not a member of a reigning house since Mary, youngest daughter of Henry VII and sister of Henry VIII, married, in 1515, Charles Brandon, duke of Suffolk. James II's marriage to Anne Hyde in 1680 did not receive the same official recognition. The queen regarded the match merely from the point of view of her daughter's happiness. It rendered necessary an appeal to parliament for her daughter's provision; and as her third son Arthur was on the point of coming of age, and also needed an income from public sources, it seemed politic to conciliate popular feeling by opening parliament in person. Accordingly, on 9 Feb. 1871, she occupied her throne in Westminster for the third time since her bereavement. Although Sir Robert Peel, son of the former prime minister, denounced as impolitic the approaching marriage of a princess with 'a son of a member of Her Majesty's government' (the Duke of Argyll, the Marquis of Lorne's father, being secretary for India; *Hansard*, cciv. 369), the dowry of 30,000*l.* with an annuity of 6,000*l.* was granted almost unanimously (350 to 1). Less satisfaction was manifested when the queen requested parliament to provide for Prince Arthur. An annuity of 15,000*l.* was bestowed, but although the minority on the final vote numbered only 11, as many as 51 members voted in favour of an unsuccessful amendment to reduce the sum to 10,000*l.* (*Hansard*, ccviii. 570-90). Meanwhile the court cast off some of its gloom. The marriage of Princess Louise took place at St. George's Chapel, Windsor, with much pomp, on 21 March 1871, in the presence of the queen, who for the occasion lightened her usual mourning attire. With unaccustomed activity in the months that followed she opened the Albert Hall (29 March), inaugurated the new buildings of St. Thomas's Hospital, and reviewed the household troops in Bushey Park, when the young prince imperial joined the royal party (30 June). At Balmoral that year, although

the queen suffered severely from rheumatic gout and neuralgia, she entertained a large family party, including the crown prince and princess of Prussia and Princess Alice.

The increasing happiness in the royal circle was menaced at the end of the year by a grief almost as great as that which befell it just ten years before. At the end of November the prince of Wales fell ill of typhoid fever, at his house at Sandringham, and as the illness reached its most critical stage, the gravest fears were entertained. The queen

went to Sandringham on 29 Nov., and news of a relapse brought her thither again on 8 Dec. with

her daughter Alice, who was still her guest. Both remained for eleven days, during which the prince's life hung in the balance. Happily, on the fateful 14 Dec., the tenth anniversary of the prince consort's death, the first indications of recovery appeared, and on the 19th, when the queen returned to Windsor, the danger was passed. A week later the queen issued for the first time a letter to her people, thanking them for the touching sympathy they had displayed during 'those painful terrible days.' As soon as her son's health was fully restored the queen temporarily abandoned her privacy to accompany him in a semi-state

procession from Buckingham Palace to St. Paul's Cathedral, there to attend a special service of thanksgiving (27 Feb. 1872). She was dressed in black velvet, trimmed with white ermine. For the last time the sovereign was received by the lord mayor with the traditional ceremonies at Temple Bar, the gates of which were first shut against her and then opened (the Bar was removed in the winter of 1878-9). Next day (28 Feb.) the queen endured renewal of a disagreeable experience of earlier years. A lad, Arthur O'Connor, who pretended to be a Fenian emissary, pointed an unloaded pistol at the queen as she was entering Buckingham Palace. He was at once seized by her attendant, John Brown, to commemorate whose vigilance she instituted a gold medal as a reward for long and faithful domestic service. She conferred the first that was struck on Brown, together with an annuity of 25*l*. On the day following O'Connor's senseless act the queen addressed a second letter to the public, acknowledging the fervent demonstrations of loyalty which welcomed her and her son on the occasion of the public thanksgiving.

That celebration, combined with its anxious cause, strengthened immensely the

bonds of sentiment that united the crown and the people. There was need of strengthening these bonds. Every year increased the feeling that the queen's reluctance to resume her old place in public life was diminishing the dignity of the crown. The formation of a republic in France at the same time encouraged the tendency to disparage monarchical institutions. Lord Selborne, the lord chancellor, when the queen's guest at

Windsor, was bold enough to tell her that if the French republic held its ground it would influence

English public opinion in a republican direction (SELBORNE, *Memorials*, vol. ii.) During the early seventies the cry against the throne threatened to become formidable. Moderators prophesied that Queen Victoria would at any rate be the last monarch of England. The main argument of the anti-royalists touched the expenses of the monarchy, which now included large provision for the queen's children. Criticism of her income and expenditure was developed with a pertinacity which deeply wounded her. Pamphlets, some of which were attributed to men of position, compared her income with the modest 10,000*l*. allowed to the president of the United States. A malignant tract, published in 1871, which enjoyed a great vogue, and was entitled 'Tracts for the Times, No. 1: What does she do with it?' by Solomon Temple, builder, professed to make a thoroughgoing examination of her private expenditure. The writer argued that while the queen was constantly asking parliament for money for her children, she was not spending the annuity originally secured to her by the civil list act on the purposes for which it was designed. A comparatively small proportion of it was applied, it was asserted, to the maintenance of the dignity of the crown, the sole object with which it was granted; the larger part of it went to form a gigantic private fortune which was in some quarters estimated to have already reached 5,000,000*l*. To these savings the writer protested she had no right; any portion of the civil list income that at the end of the year remained unexpended ought to return to the public exchequer. Personally, it was said, the queen was well off, apart from her income from the civil list. Besides Neild's bequest she had derived more than half a million from the estate of the prince consort, and the receipts from the duchy of Lancaster were steadily increasing. The assertions in regard to matters of fact were for the most part false. The queen's savings in the civil list were rarely 20,000*l*. a year, and her opportunities of thrift were

grossly misrepresented. But in the hands of the advocates of a republican form of government the pecuniary argument was valuable and it was pressed to the uttermost. Sir Charles W. Dilke, M.P. for Chelsea, when speaking in favour of an English republic at Newcastle on 6 Nov. 1871, complained that the queen paid no income tax. Ministers found it needful to refute the damaging allegations. Sir Algernon West, one of the treasury officials, was directed by the prime minister to prepare an answer to the obnoxious pamphlet. Robert Lowe, the chancellor of the exchequer, announced that income tax was paid by the queen. Twice at the end of the session of 1871 Gladstone in the House of Commons insisted that the whole of the queen's income was justly at her personal disposal (*Hansard*, cccvii. 1124, ccviii. 168-9). But the agitators were not readily silenced. Next session, on 19 March 1872, Sir Charles Dilke introduced a motion for a full inquiry into the queen's expenditure with a view to a complete reform of the civil list. His long and elaborate speech abounded in minute details, but he injured his case by avowing himself a republican; and when the same avowal was made by Mr. Anberon Herbert, who seconded his motion, a scene of great disorder followed. Gladstone denied that the queen's savings were on the alleged scale, or that the expenses of the court had appreciably diminished since the prince's death (*Hansard*, ccc. 262 sq.). Only two members of the house, Mr. G. Anderson and Sir Wilfrid Lawson, voted with Sir Charles Dilke and Mr. Herbert, and their proposal was rejected by a majority of 274. In the event the wave of republican sentiment was soon spent, but the conviction that the people paid an unduly high price for the advantages of the monarchy remained fully alive in the minds of large sections of the population, especially of the artisan class, until the queen conspicuously modified her habits of seclusion. The main solvent of the popular grievance, however, was the affectionate veneration which was roused in course of time throughout her dominions, by the veteran endurance of her rule, and by the growth of the new and powerful faith that she embodied in her own person the unity of the British empire.

VI

From the flood of distasteful criticism in 1872 the queen escaped for a few weeks in the spring (23 March to 8 April) by crossing to Germany in order to visit at Baden-Baden her stepsister, whose health was

failing. After her return home the German empress, with whose dislike of war the queen was in thorough sympathy, was a welcome guest (2 May); and in the same month she sought unusual recreation by attending a concert which Gounod conducted at the newly opened Albert Hall. But death was again busy in her circle and revived her grief. She had derived immeasurable comfort from conversation with Dr. Norman Macleod. 'How I love to talk to him,' she said, 'to ask his advice, to speak to him of my sorrows, my anxieties!' (*More Leaves*, pp. 148-161); but on 16 June he passed away. Her first mistress of the robes and lifelong friend, the Duchess of Sutherland, had died in 1868, and she now visited the duchess's son and daughter-in-law at Dunrobin Castle from 6 to 12 Sept. 1872, so that she might be present at the laying of the first stone of a memorial to her late companion. In the same month her stepsister, the Princess Féodora, the last surviving friend of her youth, died at Baden-Baden (23 Sept.), while the death on the following 9 Jan. of Napoleon III., whose amiability to her and her family was never conquered by disaster, imposed on her the mournful task of consoling his widow. She gave the sarcophagus which enclosed his remains in St. Mary's Church, Chislehurst.

The year that opened thus sadly witnessed several incidents that stirred in the queen more pleasurable sensations. In March Gladstone's Irish university bill was rejected by the House of Commons, and he at once resigned (11 March). The queen accepted his resignation, and invited Disraeli to take his place, but Disraeli declined in view of the normal balance of parties in the existing House of Commons. Disraeli was vainly persuaded to follow another course. Gladstone pointed out to the queen that the refusal of Disraeli, who had brought about his defeat, to assume office amounted to an unconstitutional shirking of his responsibilities. Disraeli was awaiting with confidence an appeal to the constituencies, which Gladstone was not desirous of inviting at once, although he could not now long delay it. In face of Disraeli's obduracy he was, at the queen's request, compelled, however reluctantly, to return for a season at least to the treasury bench (20 March). His government was greatly shaken in reputation, but they succeeded in holding on till the beginning of next year.

When the ministerial crisis ended, the queen paid for the first time an official visit to the east end of London in order to open

the new Victoria Park (2 April). The summer saw her occupied in extending hospitality to a political guest, the shah of Persia, who, like the sultan of Turkey, was the first wearer of his crown to visit England.

First visit of the shah of Persia.

The queen's regal position in India rendered it fitting for her to welcome oriental potentates at her court, and the rivalry in progress in Asia between Russia and England gave especial value to the friendship of Persia. The shah stayed at Buckingham Palace from 19 June to 4 July, and an imposing reception was accorded him. The prince of Wales for the most part did assiduous duty as host in behalf of his mother, but she thrice entertained the shah at Windsor, and he wrote with enthusiasm of the cordiality of her demeanour. At their first meeting, on 20 June, she invested him with the order of the garter; at the second, on 24 June, he accompanied her to a review in Windsor Park; and at the third, on 2 July, he exchanged photographs with her, and he visited the prince consort's mausoleum at Frogmore (*Diary of the Shah*, translated by Redhouse, 1874, pp. 144 sq.).

Meanwhile the governments of both Russia and England were endeavouring to diminish the friction and suspicion that habitually impeded friendly negotiations between them. At the opening of the year Count Schouvaloff was sent by the Tsar Alexander II on a secret mission to the queen. He assured her that the Russians had no intention of making further advances in Central Asia. Events proved that assurance to be equivocal; but there was another object of Schouvaloff's embassy, which was of more immediate interest to the queen, and accounted for the extreme cordiality that she extended to him. A matrimonial union between the English and Russian royal houses was suggested. The families were already slightly connected. The sister of the princess of Wales had married the tsarevitch (afterwards Tsar Alexander III). The proposal was regarded by the queen as of great political promise, and at the date of the shah's visit the tsarevitch and his wife were staying at Marlborough House in order to facilitate the project. In July the queen assented to the marriage of Prince Alfred, her second son, with Grand Duchess Marie Alexandrovna, the Tsar Alexander II's only daughter, and the sister-in-law of the tsarevna, the princess of Wales's sister. The queen was elated by the formation of this new tie with the family of England's present rival in Asia, and her old antagonist on the field of the Crimea. Subsequently she chose her friend Dean Stanley to perform at St.

Petersburg the wedding ceremony after the Anglican rite (23 Jan. 1874), and she struggled hard to read in the dean's own illegible handwriting the full and vivid accounts he sent her of his experiences. In the following May the coping-stone seemed to be placed on the edifice of an Anglo-Russian peace by her entertainment at Windsor of the Tsar Alexander II, her new daughter-in-law's father. But the march of events did not allow the marriage appreciably to affect the political issues at stake between Russia and England, and within three years they were again on the verge of war.

Meanwhile, in January 1874, the queen permitted Gladstone to dissolve parliament. The result was a triumphant victory for the conservatives. To the queen's relief Gladstone's term of office was ended, and she did not conceal the gratification with which she recalled Disraeli to power. Her new minister's position was exceptionally strong. He enjoyed the advantage, which no conservative minister since Peel took office in 1841 had enjoyed, of commanding large majorities in both houses of parliament. Despite a few grumblers, he exerted supreme authority over his party, and the queen was prepared to extend to him the fullest confidence. Disraeli's political views strongly commended themselves to her. His elastic conservatism did not run counter to her whiggish sentiment. His theory of the constitution gave to the crown a semblance of strength and dignity with which her recent ministers had been loth to credit it. Moreover his opinion of the crown's relations to foreign affairs precisely coincided with the belief which her husband had taught her, that it was the duty of a sovereign of England to seek to influence the fortunes of Europe. In his social intercourse, too, Disraeli had the advantage of a personal fascination which grew with closer acquaintance, and developed in the queen a genuine affection for him. He conciliated her idiosyncrasies. He affected interest in the topics which he knew to interest her. He showered upon her all his arts and graces of conversation. He did what no other minister in the reign succeeded in doing in private talk with her—he amused her. His social charm lightened the routine of state business. He briefly informed her of the progress of affairs, but did not overwhelm her with details. Nevertheless, he well understood the practical working of the constitution, and, while magnifying the queen's potential force of sovereignty, he did not prejudice the supreme responsibilities of his own office. His gene-

Marriage of the Duke of Edinburgh.

Relations with Russia.

ral line of policy being congenial to her, argument or explanation was rarely needful; but in developing his policy he was not moved by her suggestions or criticism in a greater degree than his predecessors. Even in the matter of important appointments he did not suffer her influence to go beyond previous limits. But by his exceptional tact and astuteness he reconciled her to almost every decision he took, whether or no it agreed with her inclination. When he failed to comply with her wishes he expressed regret with a felicity which never left a wound. In immaterial matters—the grant of a civil list pension or the bestowal of a subordinate post or title—he not merely acceded to the queen's requests, but saw that effect was given to them with promptness. Comparing his attitude to the queen with Gladstone's, contrasting the harmony of his relations with her and the tension that characterised his rivals, he was in the habit of saying, 'Gladstone treats the queen like a public department; I treat her like a woman.'

Disraeli's government began its work quietly. Its main business during its first session was ecclesiastical legislation, with which the queen was in full sympathy. Both the churches of Scotland and England were affected. The public worship regulation bill, which was introduced by Archbishop Tait, was an endeavour to check in England the growth of ritualism, which the queen abhorred, and the Scottish church patronage bill substituted congregational election for lay patronage in the appointment of ministers in the established church of Scotland, whose prosperity the queen made a personal concern. Resistance by the Scottish church leaders to this reform at an earlier date had led to the disruption of the established church of Scotland, and Scottish dissenters, especially those who had left the church, raised stout opposition to a concession which they regarded as too belated to be equitable. To the queen's disgust Gladstone vehemently opposed the measure. His speech against the bill excited her warm displeasure. She denounced it as mere obstruction. 'He might so easily have stopped away,' she remarked to her friend, Principal Tulloch; but the bill was carried in spite of Gladstone's protest.

It was the queen's full intention to have opened parliament in person in February 1875, by way of indicating her sympathy with the new ministers; but the serious illness of Prince Leopold from typhoid fever

kept her away. On his recovery, in conformity with the views that she and her prime minister held of the obligations of intervention in European politics that lay upon an English monarch, she immersed herself in delicate negotiations with foreign sovereigns. Rumour spread abroad that the Franco-German war was to be at once renewed. Republican France had been pushing forward new armaments, and it was averred that she was bent on avenging the humiliations of 1870-1. The queen's relatives at Berlin and Darmstadt informed her in the spring of 1875 that Bismarck was resolved to avoid a possible surprise on the

part of France by suddenly beginning the attack. Her recent friend, Tsar Alexander II, was travelling in Germany, and she wrote appealing to him to use his influence with the German emperor (his nephew) to stay violence. On 20 June 1875 she addressed herself directly to the German emperor. She insisted that her fears were not exaggerated, and declaimed against the iniquity of a new assault on France. Bismarck wrote to his master expressing cynical resentment at the queen's interference, and denied the truth of her information. By Bismarck's advice, the emperor protested to her against the imputation to him of the wickedness of which she accused his policy. That there was a likelihood of an outbreak of hostilities between France and Germany in the early months of 1875 is undoubted, but an accommodation was in progress before the queen intervened, and the scare soon passed away. Although Bismarck affected to scorn her appeals, they clearly helped to incline the political scales of central Europe in the direction of peace (BISMARCK, *Recollections*, ii. 191 seq.; BUSCH, *Conversations with Bismarck*; *Princess Alice's Letters*, p. 339).

It was agreeable to her to turn from European complications to the plans whereby Disraeli proposed to enhance the prestige of her crown, and to strengthen the chain that, since the legislation of 1858, personally linked her with the great empire of India. Her pride in her relations with India and her interest in the welfare of its inhabitants were always growing. She therefore readily agreed that the prince of Wales should, as her representative, make a state tour through the whole territory, and should visit the native princes. She took an affectionate leave of him at Balmoral on 17 Sept. 1875. The expedition was completely successful, and the prince did not return to England till the following May, when the queen welcomed him in

Empress of
India, 1876.

London (11 May 1876). Disraeli's Indian policy also included the bestowal on her of a title which would declare her Indian sovereignty. The royal titles bill, which conferred on her the designation of empress of India, was the chief business of the session of 1876, and she fittingly opened it in person amid much popular enthusiasm (8 Feb.) The opposition warmly criticised Disraeli's proposal, but he assured the House of Commons that the new title of honour would only be employed in India and in Indian affairs. The bill passed through all its stages before 1 May, when the queen was formally proclaimed empress of India in London. After the close of the session she was glad of the opportunity of marking her sense of the devotion that Disraeli had shown her by offering him a peerage (21 Aug. 1876); his health had suffered from his constant attendance in the House of Commons, and he entered the House of Lords next year as Earl of Beaconsfield. On 1 Jan. 1877 at Delhi the governor-general of India, Lord Lytton, formally announced the queen's assumption of her title of empress to an imposing assembly of sixty-three ruling princes. Memory of the great ceremonial was perpetuated by the creation of a new Order of the Indian empire, while a new imperial Order of the Crown of India was established as a decoration for ladies whose male relatives were associated with the Indian government. The queen held the first investiture at Windsor on 29 April 1878. She gloried in her new distinction, and despite Disraeli's assurances soon recognised no restrictions in its use. She at once signed herself 'Victoria R. & I.' in documents relating to India, and early in 1878 she adopted the same form in English documents of state. In 1893 the words 'Ind[ia] Imp[eratrix]' were engraved among her titles on the British coinage.

Her cheering relations with Lord Beaconsfield stimulated her to appear somewhat more frequently in public, and she played prominent parts in several military ceremonials in the early days of Disraeli's government. The queen had narrowly watched the progress of the little Ashanti war on the west coast of Africa, and at its successful conclusion she reviewed sailors, marines, and soldiers who had taken part in it in the Royal Clarence Victualling Yard at Gosport on 23 April 1874. At the end of the year, too, she distributed medals to the men. On 2 May 1876 she reviewed troops at Aldershot, and in the following September presented at Balmoral

colours to her father's regiment, the royal Scots. She reminded the men of her military ancestry.

She suffered a severe shock in the autumn of 1875 when, while crossing to the Isle of Wight, her yacht, the *Albert*, ran down another yacht, the *Mistletoe*, and thus caused three of its occupants to be drowned in her presence (18 Aug. 1875); but during the early spring of 1876 she was more active than usual in London. She attended a concert given by her command at the Royal Albert Hall (25 Feb.) She opened in semi-state a new wing of the London Hospital (7 March). Two days later she inspected in Kensington Gardens the gorgeous Albert Memorial, the most elaborate of the many monuments to her husband, a colossal gilded figure of whom fills the central place. Thence, with her three younger daughters, she went to the funeral in Westminster Abbey of her old friend, Lady Augusta Stanley, whose death, after a thirty years' association, deeply moved her; in memory of Lady Augusta she erected a monumental cross in the private grounds at Frogmore. Later in the season of 1876 she left for a three weeks' vacation at Coburg (31 March to 20 April); she travelled from Cherbourg through Prussia, but avoided Paris, and on the return journey had an interview at La Villette station, in the neighbourhood of the capital, with the president of the republic, Marshal MacMahon. The meeting was a graceful recognition on her part of the new form of government. The German empress was once more her guest in May. While going to Balmoral a few months later, she unveiled at Edinburgh yet another Albert memorial (17 Aug.) For the first time since the prince consort's death she kept Christmas at Windsor, owing to illness in the Isle of Wight, and transgressed what seemed to be her settled dislike of court entertainments by giving a concert in St. George's Hall (26 Dec.)

During the two years that followed the queen was involved in the intricacies of European politics far more deeply than at any time since the Crimean war. The subject races of the Turkish empire in the Balkans threatened the Porte with revolt in the autumn of 1875. The insurrections spread rapidly, and there was the likelihood that Russia, to serve her own ends, might come to the rescue of the insurgents. Disraeli adopted Palmerston's policy of 1854, and declared that British interests in India and elsewhere required the maintenance of the sultan's authority in-
 vico-

late. Turkey endeavoured to suppress the insurrection in the Balkans with great barbarity, notably in Bulgaria; and in the autumn of 1876 Gladstone, who had lately announced his retirement from public life, suddenly emerged from his seclusion in order to stir the people of the United Kingdom by the energy of his eloquence to resist the bestowal on Turkey of any English favour or support. One effect of Gladstone's valience was to tighten the bond between Beaconsfield and the queen. She accepted unhesitatingly Lord Beaconsfield's view that England was bound to protect Turkey from permanent injury at Russia's hands, and she bitterly resented the embarrassments that Gladstone caused her minister. But she did not readily abandon hope that Russia might be persuaded to abstain from interference in the Balkans. The occupants of the thrones of Russia and Germany were her personal friends, and she believed her private influence with them might keep the peace. Princess

The queen's efforts for peace. Alice met the tsar at Darmstadt in July 1876, and he assured the queen through her daughter that he had no wish for a conflict with England. Thus encouraged, she wrote to him direct, and then appealed to the German emperor to use his influence with him. She even twice addressed herself to Bismarck in the same sense (BUSCH, *Conversations with Bismarck*, ii. 277). But her efforts failed. Russia declared war on Turkey on 24 April 1877, and before the end of the year had won a decisive victory.

All the queen's sympathy with Russia thereupon vanished, and she, no less than Lord Beaconsfield, was resolved that England should regulate the fruits of Russia's success. Twice did she openly indicate her sympathy with her minister in the course of 1877—first by opening parliament in person in February, and secondly by paying him a visit in circumstances of much publicity at his country seat, Hughenden Manor, Buckinghamshire. On 21 Dec. 1877 she, with Princess Beatrice, travelled by rail from Windsor to High Wycombe station, where Beaconsfield and his secretary, Mr. Montagu Corry, met her. The mayor presented an address of welcome. Driving with her host to Hughenden, she stayed there two hours, and on leaving planted a tree on the lawn. A poem in 'Punch' on 29 Dec. 1877, illustrating a sketch by Mr. Linley Sambourne, humorously suggested the powerful impression that the incident created both in England and in Europe.

At the beginning of 1878 the sultan made

a personal appeal to the queen to induce the tsar to accept lenient terms of peace. She telegraphed to the tsar an entreaty to accelerate negotiations; but when the tsar forced on Turkey conditions which gave him a preponderating influence within the sultan's dominions, she supported Lord Beaconsfield in demanding that the whole settlement should be referred to a congress of the European powers. Through the storms that

Her support of Beaconsfield's policy succeeded no minister received stauncher support from his sovereign than Lord Beaconsfield from the queen. The diplomatic struggle brought the two countries to the brink of war, but the queen deprecated retreat. Before the congress of Berlin met in June 1878, Beaconsfield warned the queen that his determination to prevent Russia from getting a foothold south of the Danube might abruptly end in active hostilities. The queen declared herself ready to face the risk. When, therefore, at an early session of the congress, a deadlock arose between Lord Beaconsfield, who acted as the English envoy, and Prince Gortschakoff, the Russian envoy, and Lord Beaconsfield threatened departure from Berlin so that the dispute might be settled by 'other means,' he made no empty boast, but acted in accord with an understanding which he had previously reached with the queen. Russia yielded the specific point at Bismarck's persuasion; and although both the material and moral advantages that England derived from her intervention were long questioned, the queen welcomed Lord Beaconsfield with unstinted eulogy when he returned from Berlin, bringing, in his own phrase, 'peace with honour.' On 22 July 1878 she invested him at Osborne with the order of the garter. War preparations had meantime been in active progress with the queen's full approval. On 13 May 1878 she had held a review on a great scale at Aldershot in company with the crown prince and princess of Prussia, who were her guests; and on 18 Aug. she reviewed at Spithead in inauspicious weather a strong fleet designed for 'special service.'

The situation revived at all stages the queen's memory of the earlier conflict with Russia, the course of which had been largely guided by her husband's resolution. She had lately re-studied closely the incidents of the Crimean war in connection with the 'Life' of the prince consort, on which Sir Theodore Martin was engaged under her supervision. At the end of 1877 there appeared the third volume of the biography,

which illustrated the strength of court feeling against Russia when the Crimean war was in progress. The 'Spectator,' a journal supporting Gladstone, censured the volume as 'a party pamphlet,' in favour of Lord Beaconsfield, and Gladstone himself reviewed it in self-defence.

Domestic incident during 1878 was hardly less abundant than public incident. On

22 Feb. there took place at Berlin the first marriage of a grandchild of the queen, when Charlotte, the eldest daughter of the crown prince and princess, married the hereditary Duke of Saxe-Meiningen. But it was mainly death in the queen's circle that marked her domestic year. Her former ally, Victor Emmanuel, had died on 9 Jan. Two attempts at Berlin to assassinate the old German emperor (11 May and 2 June) gave her an alarming impression of the condition of Germany, where she specially feared the advance of socialism and atheism. On 4 June died Lord Russell, and she at once offered his family, through Lord Beaconsfield, a public funeral in Westminster Abbey; but the offer was declined, and he was buried at Chelms. A few days later (12 June) there passed away at Paris her first cousin, the dethroned and blind king of Hanover. She gave directions for his burial in St. George's Chapel, Windsor, and herself attended the funeral (26 June). But the heaviest blow that befell her in the year

was the loss of her second daughter, Princess Alice, who had been her companion in her heaviest trials. She died of diphtheria at Darmstadt on 14 Dec., the seventeenth anniversary of the prince consort's death. It was the first loss of a child that the queen had experienced, and no element of sorrow was absent. The people again shared their sovereign's grief, and on the 26th she addressed to them a simple letter of thanks, describing the dead princess as 'a bright example of loving tenderness, courageous devotion, and self-sacrifice to duty.' She erected a granite cross to her memory at Balmoral next year, and showed the tenderest interest in her motherless family.

1879 brought more happiness in its train. Amid greater pomp than had characterised royal weddings since that of the princess royal, the queen attended on 13 March the marriage at St. George's Chapel, Windsor, of her third son, the Duke of Connaught. The bride was daughter of Prince Frederick Charles of Prussia (the red prince), a nephew of the German emperor, and the new connection with the Prussian house was thoroughly congenial to the queen.

Twelve days later the queen enjoyed the new experience of a visit to Italy. She

stayed for nearly a month, till First visit to Italy, 1879. 23 April, at Baveno on Lago Maggiore. She delighted in the

scenery, and was gratified by a visit from the new King Humbert and Queen Margherita of Italy. On her return to England she learned of the birth of her first great-grandchild, the firstborn of the hereditary princess of Saxe-Meiningen. Hardly had the congratulations

ceased when she suffered a terrible shock by the death, 19 June 1879, in the Zulu war of the prince imperial, the only child of the ex-empress of the

French. He had gone to Africa as a volunteer in the English army, and was slain when riding almost alone in the enemy's country. He was regarded with much affection by the queen and by the Princess Beatrice, and all the queen's wealth of sympathy was bestowed on the young man's mother, the widowed Empress Eugénie. While the prince's remains were being interred at Chislehurst the queen was the empress's sole companion (12 July).

At the time the political situation was not promising, and was a source of grave anxiety to the queen. The Zulu war, in which the prince imperial met his death, was only one symptom of the unrest in South Africa which the high-handed policy of the governor of the Cape, Sir Bartle

Frere, had brought about. Lord Beaconsfield did not conceal his disapproval of the action of the

governor, but his preoccupation with Eastern Europe had not permitted him to control the situation, and he felt bound to defend the positions into which the government had been led by its accredited representative.

Equal difficulties were encountered in India, where the rival pretensions of England and Russia to dominate the amir of Afghanistan had involved the Indian government, under Lord Lytton's viceroyalty, in two successive wars with the Afghans (November 1878 and December 1879).

The strife of political parties at home greatly complicated the situation, and gave the queen additional cause of distress. Gladstone, during the autumn of 1879, in a series of passionate speeches delivered in Midlothian, charged the government with fomenting disaster by their blustering imperialism. The queen resented his campaign. His persistent attacks on Lord Beaconsfield roused her wrath, and in private letters she invariably described his denunciations of her favourite minister as shameless or disgraceful. Her faith in Beaconsfield was unquenchable. He acknowledged her sympathy

in avowals of the strongest personal attachment to her. He was ambitious, he told her, of securing for her office greater glory than it had yet attained. He was anxious to make her the dictatress of Europe. 'Many things,' he wrote, 'are preparing which for the sake of peace and civilisation render it most necessary that her majesty should occupy that position.' But there were ominous signs that Beaconsfield's lease of power was reaching its close, despite all the queen could do to lengthen it. For the fourth time while he was prime minister the queen opened the last session of his parliament on 5 Feb. 1880. The ceremonial was conducted with greater elaboration than at any time since the prince's death. On 24 March parliament was dissolved, and the future of Lord Beaconsfield was put to the hazard of the people's vote.

Next day the queen left on a month's visit to Germany. She spent most of her time at her late half-sister's Villa Hohenlohe at Baden-Baden, but went thence to Darmstadt to attend the confirmation of two daughters of the late Princess Alice. In the family circle of her daughter, the crown princess, she found while abroad much to gratify her.

Her grandson, Prince William of Prussia (now Emperor William II), was just betrothed to Princess Victoria of [Schleswig-Holstein-Sonderburg] Augustenburg, daughter of Duke Frederick, the claimant to the duchy of Holstein, who had fared so disastrously in the Schleswig-Holstein struggle, and had died in the previous January. She sympathised with the sentiment of the young man's parents that poetic justice was rendered to Duke Frederick, whom Bismarck's Prussian policy had crushed, by the entrance of his daughter into the direct line of succession to the imperial crown of the Prussian ruler's consort. But, in spite of her joy at her grandson's betrothal, her keenest interests were absorbed in the progress of the general election in England. Telegrams passed constantly between her and the prime minister, and her spirits sank when the completeness of the defeat of the conservative party proved to her that he could serve her no longer. Liberals and home rulers had in the new House of Commons no less a majority over the conservatives than 166. On 21 April she was back at Windsor, and next day had two hours' conversation with her vanquished minister. As in 1855 and 1859, when a ministerial crisis brought her in view of the mortifying experience of making prime minister one whom she distrusted, she care-

fully examined all possible alternatives. As soon as Lord Beaconsfield left her she summoned by his advice Lord Hartington, who was nominal leader of the liberal party; for Gladstone had never formally resumed the post since his retirement in 1875. She invited Lord Hartington to form a ministry (22 April). He told her, to her own and Lord Beaconsfield's disappointment, that Gladstone alone had won the victory and that he alone must reap the rewards. Beaconsfield said that Lord Hartington showed want of courage in hesitating to take office; he 'abandoned a woman in her hour of need.' On returning to London Lord Hartington called on Gladstone. Next morning (23 April) he went back to Windsor with the queen's old friend, Lord Granville, the liberal leader of the House of Lords. Against her will they convinced her that Gladstone alone was entitled to power, and, making the best of the difficult situation, she entrusted them with a message to him requesting an interview.

Gladstone hurried to Windsor the same evening, and after a few minutes' conversation he accepted the queen's commission to assume power. Gladstone's second government was soon in being, and, although some of its personnel was little to the queen's taste, she received her new advisers with constitutional correctness of demeanour.

Two acts due to the queen's kindness of heart involved her in some public censure as soon as the new liberal government was installed. She felt lifelong compassion for the family of her exiled cousin, the king of Hanover, and showed great tenderness to his daughter Frederica, whom she called 'the poor lily of Hanover.' She not only countenanced her marriage with Baron von Pawell-Rammingen, who was formerly her father's equerry, but arranged for the wedding to take place in her presence in her private chapel at Windsor (24 April 1880). A few months later she, as visitor of Westminster Abbey, assented to a proposal to place there a monument in memory of the late prince imperial. The House of Commons in spite of Gladstone's remonstrance, condemned the scheme on the ground of the prince's nationality (16 July 1880). The queen at once appointed a site for the monument in St. George's Chapel, Windsor (21 July).

The misgiving with which the queen's new advisers inspired her stimulated her critical activity. She informed Gladstone and his colleagues that she insisted on a full exercise of her right of 'commenting on all proposals before they are matured.' Ministers

must take no decision before their completed plans were before her. One of the new government's first domestic measures—the burials bill—at once caused her disquietude. The bill was designed to authorise the conduct of funerals by nonconformist ministers in parish churchyards, and the queen anxiously sought the opinion of Lord Selboms, like herself a devoted adherent of the Anglican establishment, respecting the forms of religious service in churchyards that were to be sanctioned. She was more seriously per-

Distrust of ministerial measures.

turbed by this government's plans for the further reorganisation of the army, the control of which, despite the last liberal government's legislation, she persisted in treating as the crown's peculiar province. In May she stoutly protested against the proposal for the complete abolition of flogging in the army, to which she saw no possible alternative 'in extreme cases of cowardice, treachery, plundering, or neglect of duty on sentry.' She objected to the suspension of the practice of giving honorary colonelcies with incomes as rewards for distinguished officers; any abuse in the method of distribution could be easily remedied. When Childers, the secretary of war, in the winter of 1880 sketched out a scheme for linking battalions and giving regiments territorial designations, she warmly condemned changes which were likely, in her opinion, to weaken the regimental *esprit de corps*. Childers, though he respectfully considered the queen's suggestions, rarely adopted them, and in a speech at Pontefract on 19 Jan. 1882 he felt himself under the necessity of openly contesting the view that the crown still governed the army.

During the first months of Gladstone's second administration the queen's main energies were devoted to urging on the ministers the duty of spirited and sustained action in bringing to an end the wars in Afghanistan and South Africa, which their predecessors had left on their hands. The Afghan campaign of 1880 she watched with the closest attention. After the defeat of the English troops at Maiwand (27 July 1880) she wrote to Childers of her dread lest the government should not adequately endeavour to retrieve the disaster. She had heard ru-

Afghanistan, 1880.

mours, she said, of an intended reduction of the army by the government. She thought there was need of increasing it. On 22 Aug. she proved her anxiety by inspecting the troopship *Jumna* which was taking reinforcements to India. But, to her intense satisfaction and gratitude, Sir Frederick (now Earl) Roberts, by a prompt march on Kandahar, reduced the

Afghans to submission. The new amir, Abdur-Rahman, was securely installed on the Afghan throne, and to the queen's relief he maintained to the end of her reign friendly relations with her and her government, frequently speaking to his family and court in praise of her character and rule (AMIR ABDUR-RAHMAN, *Autobiography*, 1900). In like manner, after the outbreak of the Boer war in December 1880, and the defeat and death of General Colley on 27 Feb. 1881 at Majuba Hill, the queen was unremitting in her admonitions to the government to hestir themselves.

The Transvaal, 1881.

She recommended Sir Frederick Roberts for the vacant chief command in the Transvaal—a recommendation which the government made independently at the same moment. Her ministers however, decided to carry to a conclusion the peace negotiations which had previously been opened with the Boers, and before General Roberts landed in South Africa the war was ended by the apparent capitulation of the queen's advisors to the enemy. The ministerial action conflicted with the queen's views and wishes, and served to increase her distrust of ministerial policy.

But, whatever her opinion of her government's diplomacy, she was not sparing in signs of sympathy with the sufferings of her troops in the recent hostilities. By her desire the colours of the 24th regiment, which had been temporarily lost during the Zulu war at the battle of Isandhlwana, but were afterwards recovered, were brought to Osborne, and while speaking to the officers in charge of the bravery of the regiment and its trials in South Africa, she decorated the colours with a wreath (28 July 1880). During 1882, she once more held a review at Aldershot (16 May), and she presented at Parkhurst, Isle of Wight, new colours to the second battalion of the Berkshire regiment (66th), which had lost their old colours at Maiwand in Afghanistan (17 Aug.).

Discontent with her present advisers intensified the grief with which she learned of the death of Lord Beaconsfield. Death of Beaconsfield, 18 April, 1881. —her 'dear great friend' she called him—on 19 April 1881. She and all members of her family treated his loss as a personal bereavement. Two days after his death she wrote from Osborne to Dean Stanley: 'His devotion and kindness to me, his wise counsels, his great gentleness combined with firmness, his one thought of the honour and glory of the country, and his unswerving loyalty to the throne make the death of my dear Lord Beaconsfield a na-

tional calamity. My grief is great and lasting.' She knew, she added, that he would wish to be buried beside his wife at Hughenden, but she directed that a public monument should be placed to his memory in Westminster Abbey (STANLEY, ii, 565). At the funeral at Hughenden, on the 26th, she was represented by the prince of Wales and Prince Leopold. Of two wreaths which she sent, one, of primroses, bore the inscription, 'His favourite flower. . . A tribute of affection from Queen Victoria,' and thus inaugurated the permanent association of the primrose with Lord Beaconsfield's memory. But such marks of regard did not exhaust the queen's public acts of mourning. Four days after the burial (30 April) she and the Princess Beatrice visited Lord Beaconsfield's house at Hughenden, and the queen placed with her own hands a wreath of white camellias on the coffin, which lay in the still open vault in the churchyard. Next year, on a site chosen by herself in the church, she set up a memorial tablet—a low-relief profile portrait of the minister—with an inscription from her own pen: 'To the dear and honoured memory of Benjamin, Earl of Beaconsfield, this memorial is placed by his grateful and affectionate sovereign and friend Victoria R.I. ("Kings love him that speaketh right."—Proverbs xvi. 13.) February 27th, 1882.' No sovereign in the course of English history had given equal proofs of attachment to a minister.

The queen's generous sympathies were never wholly absorbed by her own subjects or her friends at home. A few weeks before Lord Beaconsfield's death she was shocked by the assassination of the Tsar Alexander II, father of her daughter-in-law, the Duchess of Edinburgh (13 March), and a few months later the death by a like violence of President Garfield of the United States drew from her an autograph letter of condolence to the widow which the veteran politician Charles Pelham Villiers described as a 'masterpiece' of womanly consideration and political tact.

Before the end of 1881 the government was involved in grave difficulties in Egypt.

Arabi Pasha, the khedive's war minister, fomented a rebellion against the khedive's authority in the autumn, and by the summer of 1882 he had gained complete control of the Egyptian government. Grave disorders in the administration of Egyptian finance had led England and France in 1878 to form what was known as the dual control of the Egyptian revenue, and this arrangement im-

posed on them the responsibility of preserving order in the country. France now, however, declined to join England in active defence of the khedive's authority, and the queen's government undertook to repress the insurrection of Arabi single-handed. The queen, quickly convinced of the need of armed intervention, evinced characteristic solicitude for prompt and effectual action. On 10 July, when hostilities were imminent, she inquired of Childers what forces were in readiness, and deprecated the selection of a commander-in-chief until she had had time to consider the government's suggestions. The condition of the transport and the supply of horses demanded, she pointed out, immediate consideration. On the 21st she approved the appointment of Sir Garnet Wolseley as commander-in-chief, with Sir John Acland as chief of the staff. On 28 July she asked for information respecting the press regulations. Her concern for the success of the expedition was increased by the appointment, with her full consent, of her son, the Duke of Connaught, to the command of the guards' brigade in the first division of the army, while the Duke of Teck filled a place on Wolseley's staff. Until the

whole of the expeditionary force was embarked she never ceased to advise the war office respecting practical points of equipment, and was peremptory in her warnings in regard to food supplies and hospital equipment. The comfort as well as the health of the troops needed, in her view, attention. In a single day in August she forwarded no less than seventeen notes to the minister of war.

The opening of the campaign sharpened her zeal. On 12 Sept. she wrote from Balmoral, 'My thoughts are entirely fixed on Egypt and the coming battle.' When the news of the decisive victory at Tel-el-Kebir reached her (13 Sept.), she caused a bonfire to be lit on the top of Craig Gowan, thus celebrating the receipt of the news in the same way as that of the fall of Sebastopol in 1855. But her joy at the victory was dashed by the fear that the government would not follow it up with resolution. She was aware of differences of opinion in the cabinet, and she spared no exertion to stiffen the backs of her ministers. On 19 Sept. she protested alike against any present diminution of troops in Egypt, and against the lenient treatment of the rebellious Arabi. On 21 Sept. 1882 she wrote to Childers (*Life*, ii, 33): 'If Arabi and the other principal rebels who are the cause of the deaths of thousands are not severely punished, revolution and rebellion will be greatly en-

couraged, and we may have to do all over again. The whole estate of Egypt and its future are full of grave difficulties, and we must take great care that, short of annexation, our position is firmly established there, and that we shall not have to shed precious blood and expend much money for nothing.' Finally Egypt was pacified, and English predominance was secured, although disorder was suffered to spread in the subsidiary provinces of the Soudan with peril to the future. In the last months of the year the queen turned to the grateful task of meting out rewards to those who had engaged in the recent operations. In October she devised a new decoration of the royal red cross for nurses who rendered efficient service in war; the regulations were finally issued on 7 April 1883. On 18 Nov. she reviewed in St. James's Park eight thousand troops who had just returned from Egypt; and at Windsor, three days later, when she distributed war medals, she delivered to the men a stirring address of thanks.

But it was not only abroad that anxieties confronted the queen and her government during 1882. For the fifth time the queen's life was threatened by assassination. A lunatic, one Roderick Maclean, fired a pistol at her—happily without hitting her—on 2 March at Windsor railway station, as she was returning from London. Soon afterwards disaffection in Ireland reached a climax in the murder of Lord Frederick Cavendish, the chief secretary, and of Thomas Henry Burke, the under-secretary (8 May). Resolution in the suppression of disorder always won the queen's admiration, and she had given every encouragement to W. E. Forster, while Irish secretary, in his strenuous efforts to uphold the law. The more conciliatory policy which ultimately prevailed with Forster's successors awoke no enthusiasm in her.

Happily the queen found some compensation for her varied troubles in private life. In the spring she spent a vacation abroad for the first time in the Riviera, staying for a month at Mentone. Once more, too, a marriage in her family gladdened her. Her youngest son, Leopold, duke of Albany, had become engaged to a German princess of the house of Waldeck-Pyrmont, whose sister was second wife of the king of the Netherlands. Parliament was invited on 23 March to increase the prince's income, as in the case of his two next elder brothers, from 15,000*l.* to 25,000*l.* Gladstone pressed the proposal on the House of Commons, but as many as forty-two members—mainly

from Ireland—voted against the proposal, which was carried by a majority of 345. The customary corollary that in case of the prince's death 6,000*l.* a year was to be allowed his widow happily passed without dissent. Shortly after the queen's return from Mentone she attended the marriage at St. George's Chapel, Windsor. She purchased in perpetuity the crown property of Claremont, which had been granted her for life by parliament on the death in 1866 of its former holder, King Leopold, and generously presented it to the newly married pair for their residence. Twice during the year she took part in public ceremonies of interest. On 6 May she went to Epping Forest, which the corporation of London had recently secured for a public recreation ground, and she dedicated it formally to public use. At the end of the year, on 4 Dec., at the request of the lord chancellor, she inaugurated the new law courts in the Strand.

The prevailing note of the queen's life, owing alike to public and private causes, during the two years that followed was one of gloom. At the close of 1882 she had been deprived by death of another friend in whom she trusted—
 Years of gloom, 1883-5. Archbishop Tait. Fortunately she found Gladstone in agreement with herself as to the fitness of Edward White Benson, the first headmaster of her husband's foundation of Wellington College, and afterwards first bishop of Truro, to succeed to the primacy. Benson's acceptance of the office was, she said, 'a great support to herself,' and with him her relations were uninterruptedly cordial. At the moment that he took the appointment, the queen suffered a new sense of desolation from the death, on 27 March 1883, of her faithful attendant, John Brown. She placed a tombstone to his memory in Crathie churchyard, and invited suggestions from Tennyson for the inscription, which she prepared herself. At Balmoral she caused a statue of Brown to be erected, and at Osborne a granite seat was inscribed with pathetic words to his memory. Subsequently an accidental fall on the staircase at Windsor rendered her unable to walk for many months and increased her depression. Even in January 1884 it was formally announced that she could not stand for more than a few minutes (*Court Circular*, 21 Jan.)

In the summer of 1883 she consoled herself in her loneliness by preparing for publication another selection from her journal—'More Leaves from a Journal of Life in the Highlands, 1862-1882,' and she dedicated it

'To my loyal highlanders, and especially to the memory of my devoted personal attendant and faithful friend, John Brown.' She still took a justly modest view of the literary value of her work. When she sent a copy to Tennyson she described herself as 'a very humble and unpretending author, the only merit of whose writing was its simplicity and truth.' Unluckily her reviving spirit was dashed by the second loss of a

Prince Leopold's death.

child. On 28 March 1884, the Duke of Albany, her youngest and her lately married son, died suddenly at Cannes. This trial shook her severely, but she met it with courage. 'Though all happiness is at an end for me in this world,' she wrote to Tennyson, 'I am ready to fight on.' In a letter to her people, dated from Windsor Castle 14 April, she promised 'to labour on for the sake of my children, and for the good of the country I love so well, as long as I can;' and she tactfully expressed thanks to the people of France, in whose territory her son had died, for the respect and kindness that they had shown. Although the pacific temper and condition of the prince's life rendered the ceremony hardly appropriate, the queen directed a military funeral for him in St. George's Chapel, Windsor, on 6 April.

The conduct of the government during the year (1883-4) gave her small cause for satisfaction. Egypt, which was now practically administered by The Sudan. England, was the centre of renewed anxiety. Since Arabi's insurrection, the inhabitants of the Soudan had, under a fanatical leader, the Mahdi, been in revolt against Egyptian rule, and they were now menacing the Egyptian frontier. During 1883 the English ministry had to decide whether to suppress by force the rebellion in the Soudan, or by abandoning the territory to the insurgents to cut it off from Egypt altogether. To the queen's dismay the policy of abandonment was adopted, with a single qualification. Some Egyptian garrisons still remained in the Soudan in positions of the gravest peril, and these the English government undertook to rescue. The queen recommended prompt and adequate action, but her words fell on deaf ears (January 1884). In obedience to journalistic clamour the government confined themselves to sending General Gordon, whose influence

with the Soudan natives had in the past proved very great, to Khartoum, the capital of the disturbed districts, in order to negotiate with the rebels for the relief of the threatened garrisons. The queen watched Gordon's

advance towards his goal with the gravest concern. She constantly reminded the government of the danger he was running. His influence with the natives of the Soudan unluckily proved to be of no avail, and he was soon himself besieged in Khartoum by the Mahdi's forces. Thereupon the queen solemnly and unceasingly warned the government of the obligations they were under of despatching a British expedition to relieve him. The government feared to involve itself further in war in Egypt, but the force of public opinion was with the queen, and in the autumn a British army was sent out, under Lord Wolseley, with a view to Gordon's rescue. The queen reproached the government with the delay, which she treated as a gross neglect of public duty. The worst followed. The expedition failed to effect its purpose; Khartoum was stormed, and Gordon was killed before the relieving force arrived (26 Jan. 1885). No disaster of her reign

The queen's view of Gordon's death. caused the queen more pain and indignation. She expressed scorn for her advisers with unqualified frankness. In a letter of condolence, written with her own hand, to Gordon's sister she said that she 'keenly felt the stain left upon England' by General Gordon's 'cruel but heroic fate' (17 Feb. 1885). She had a bust of Gordon placed in the corridor at Windsor, and when Miss Gordon presented her with her brother's bible she kept it in a case in the corridor near her private rooms at Windsor, often showing it to her guests as one of her most valued treasures. She greatly interested herself in the further efforts to rescue the Egyptian garrisons in the Soudan. In February 1885 the grenadier guards, who were ordered thither, paraded before her at Windsor, and she was gratified by offers of men from the Australian colonies, which she acknowledged with warm gratitude, although the government declined them. At the end of the year she visited the wounded at Netley, and she distributed medals to non-commissioned officers and men at Windsor. But the operations in the Soudan brought her cold comfort. They lacked the decisive success which she loved to associate with the achievements of British arms, and she regretfully saw the Soudan relapse into barbarism.

Home politics had meanwhile kept the queen closely occupied through the autumn of 1884. In the ordinary session of that year the government had passed through the House of Commons a bill for a wide extension of the franchise: this the House of Lords

had rejected in the summer, whereupon the government announced their intention of passing it a second time through the House of Commons in an autumn session. A severe struggle between the two houses was thus imminent. The queen had adopted Lord Beaconsfield's theory that the broader the basis of the constitution, the more secure the crown, and she viewed the fuller enfranchisement of the labouring

bill, 1861.

classes with benevolence. At the same time she always regarded a working harmony between the two houses of parliament as essential to the due stability of the monarchy, and in the existing crisis she was filled with a lively desire to settle the dispute between two estates of the realm with the least possible delay. In her private secretary, Sir Henry Ponsonby, she had a tactful counsellor, and she did not hesitate through him to use her personal influence with the leaders of both parties to secure a settlement. Luckily it was soon apparent that the danger of conflict looked greater than it was. Before her intervention had gone far, influential members of the conservative party, including Lord Randolph Churchill and Sir Michael Hicks Beach, had independently reached the conclusion that the House of Lords might safely pass the franchise bill if to it were joined a satisfactory bill for the redistribution of seats. This view rapidly gained favour in the conservative ranks, and was approved by some of Gladstone's colleagues, although he himself at first opposed it. The queen urged on all sides a compromise on these lines, and her influence with leading conservatives of the House of Lords removed what might have proved to be a strong obstacle to its accomplishment. Before the end of the year (1884) the franchise bill and a redistribution of seats bill were concurrently introduced into parliament, and the queen had the satisfaction of seeing averted the kind of warfare that she most dreaded within the borders of the constitution.

The queen spent the spring of 1885 at Aix-les-Bains, and on her return journey

The princess
of Batten-
berg.

visited Darmstadt to attend the confirmation of her grandchild, Princess Irene of Hesse-Darmstadt. But there were other reasons for the visit. Her care for the Hesse family had brought her the acquaintance of the grand duke's first cousins, the young princes of Battenberg. They were sons of the grand duke's uncle, Prince Alexander of Hesse, by amorganatic marriage with the Countess von Hauke, who was created countess of

Battenberg in 1851. All the brothers were known to the queen, had been her guests, and found favour with her. The eldest, Prince Louis, joined the British navy, became a naturalised British subject, and in 1884 married Princess Alice's eldest daughter and the queen's granddaughter, Princess Victoria of Hesse. Thenceforth the relations of the three brothers with the royal family

Princess
Beatrice's
marriage,
1885.

grew more intimate, with the result that in 1885 the third and youngest of them, Prince Henry of Battenberg, proposed marriage to the queen's youngest daughter, Princess Beatrice. The queen readily assented, and, in letters announcing the engagement to her friends, spoke of Prince Henry's soldierly accomplishment, although, she frankly added, he had not seen active service. The princess had long been the queen's constant companion, and it was agreed that the princess with her husband should still reside with her. Parliament, on Gladstone's motion, voted the princess the usual dowry of 30,000*l.*, with an annuity of 6,000*l.* The minority numbered 88, the majority 337. But the match was not popular in England, where little was known of Prince Henry except his German origin, nor was it well received at the court of Berlin, where the comparatively low rank of the Battenbergs was held to unfit them for close relations with the queen. The marriage took place in a simple fashion, which delighted the queen, at Whippingham church, near Osborne, on 23 July.

All the queen's nine children had thus entered the matrimonial state. The queen's mode of life was in no way affected by the admission of Prince Henry into the royal circle. She always enjoyed the society of the young, and in course of time she was cheered by the presence in her household of the children of Princess Beatrice.

Much else happened to brighten the queen's horizon in the summer of 1885.

Gladstone's
fall, 8 June
1885.

Princess Beatrice's marriage followed hard upon the fall of Gladstone's government. It had been effectually discredited by its incoherent Egyptian policy, and it was defeated on its budget proposals on 8 June 1885. Gladstone at once resigned, and the queen did not permit differences of opinion to restrain her from offering him, in accordance with her practice on the close of a minister's second administration, a reward for long service in the form of an earldom. This honour Gladstone declined. She invited the leader of the conservative party, Lord Salisbury, to form a ministry, and at his request

endeavoured to obtain from Gladstone some definite promise of parliamentary support during the few months that remained before the dissolution of parliament in November, in accordance with the provisions of the recent reform bill. Gladstone replied evasively, but the queen persuaded Lord Salisbury to rest content with his assurances, and to take

office (24 June). With Lord Salisbury's first ministry she was at once on good terms.

It was therefore disappointing to her that his first tenure of office should be threatened by the result of the general elections in November, when 250 conservative members were returned against 334 liberals and 86 Irish nationalists. The nationalists, by joining the liberals, would leave this government in a hopeless minority. The queen gave public proof of her sympathy with her conservative ministers by opening parliament in person, as it proved, for the last time (21 Jan. 1886). Five days later Lord Salisbury's government was outvoted. The queen accepted their resignation and boldly faced the inevitable invitation to Gladstone to assume power for the third time.

The session that followed was the stormiest the queen had watched since Peel abolished

the corn laws in 1846. But her hostility to home rule.

attitude to Gladstone through the later session was the antithesis of her attitude to Peel in the earlier. Peel had changed front in 1846, and the queen had encouraged him with all her youthful enthusiasm to persevere in his new path. Gladstone suddenly resolved to grant home rule to Ireland, after having, as it was generally understood, long treated the proposal as a dangerous chimera. To Gladstone's change of front she offered a strenuous resistance. To the bestowal of home rule on Ireland she was uncompromisingly opposed, and she freely spoke her mind to all who came into intercourse with her. The grant of home rule appeared to her to be a concession to the forces of disorder. She felt that it amounted to a practical separation between England and Ireland, and that to sanction the disunion was to break the oath that she had taken at her coronation to maintain the union of the two kingdoms. She complained that Gladstone had sprung the subject on her and on the country without giving either due notice. The voters, whom she believed to be opposed to it, had had no opportunity of expressing their opinion. Gladstone and his friends replied that the establishment of a home rule parliament in Ireland increased rather than diminished the dignity of the crown by making it the strongest link which would henceforth bind

the two countries together. But the queen was unconvinced. To her immense relief Gladstone was deserted by a large number of his followers, and his home rule bill was decisively rejected by the House of Commons (7 June). With that result the queen was content; she desired the question to sleep; and, although she did not fear the issue, she deprecated an immediate appeal to the country; she deemed it a needless disturbance of her own and of the country's peace to involve the people in the excitement of a general election twice within nine months. But Gladstone was resolute, and parliament was dissolved. To the queen's satisfaction the ministry was heavily defeated.

Gladstone resigned without meeting the new parliament, and in July Lord Salisbury for the second time was entrusted by the queen with the formation of a government. The queen's political anxieties were at once diminished. Although the unexpected resignation on 20 Dec. 1886 of the new leader of the House of Commons, Lord Randolph Churchill, roused in her doubts of the stability of the government, and caused her to scan the chances of yet another dissolution, the crisis passed, and Lord Salisbury's second ministry retained office for a full term of years. Indeed, with an interval of less than three (1892-5), Lord Salisbury now remained her prime minister until her death, fourteen and a half years later, and thus his length of service far exceeded that of any of her previous prime ministers. Her relations with him were uniformly cordial. She knew him of old as the colleague of Lord Beaconsfield. With his general views of policy she was in accord. She especially appreciated his deep interest in, and full knowledge of, foreign affairs. She felt confidence in his judgment and admired his sturdy common sense. Hence there was none of that tension between him and the queen which was inevitable between her and Gladstone. Lord Salisbury's second and third governments gave her a sense of security to which Gladstone had made her a stranger. She soon placed a portrait of Lord Salisbury in the vestibule of her private apartments at Windsor face to face with one of Lord Beaconsfield.

Within a few days of the laying of the spectre of home rule, the queen began the fiftieth year of her reign (20 June 1886). The entrance on her year of jubilee, and the coming close of a quarter of a century of widowhood, conquered something of her reluctance to figure in public life, and she resumed much of her earlier public

activity. On 26 Feb. 1886 she had listened to Gounod's 'Mors et Vita' at the Albert Hall. On 11 May she visited Liverpool to open an international exhibition of navigation and commerce. But her public appearances were mainly timed so as to indicate her sympathy with that rising tide of imperialist sentiment which was steadily flowing over the whole British empire, and was strengthening the bonds between the colonies and India and the home country. In the early months of 1886 the prince of Wales had actively engaged in organising a colonial and Indian exhibition at South Kensington. In this enterprise the queen manifested great interest, and on 1 May she visited the exhibition, which drew numerous visitors to England from India and the colonies. On 2 July she attended a review at Aldershot held in honour of the Indian and colonial visitors whom, three days later, she entertained at lunch at Windsor. On 8 July she received there Indian and other native workmen who had taken part in the exhibition, and she accepted gifts from them. In August, on her way to Balmoral, she visited another international exhibition at Edinburgh, and later in the year she approved the suggestion made by the prince of Wales to the lord mayor of London to commemorate her fifty years of reign by inviting public subscriptions for the erection of an imperial institute which should be a meeting-place for visitors to England from India and the colonies and should permanently exhibit specimens of the natural products of every corner of her empire.

During the next year—her year of jubilee—1887, the queen more conspicuously illustrated her attachment to India by including native Indians among her personal attendants, and from one of them, the munshi Abdul Karim, who served her as groom of the chamber, she began taking lessons in Hindustani. Although she did not make much progress in the study, the munshi remained to instruct her till her death.

Since the prince consort's death her visits to London had been few and brief, rarely exceeding two nights. In the jubilee year, 1887, from those that preceded it, she spent in the opening quarter the exceptional period of ten successive days in her capital (19–29 March). The following month she devoted to the continent, where she divided the time between Cannes and Aix-les-Bains. On returning

to England she paid another visit to London, and on 14 May opened the People's Palace in the east end. The enthusiastic loyalty which was displayed on her long journey through the metropolis greatly elated her. After her customary sojourn at Balmoral (May–June) she reached London on 20 June to play her part in the celebration of her jubilee. Next day, 21 June, the chief ceremony took place, when she passed in procession to Westminster Abbey to attend a special thanksgiving service. In front of her carriage rode, at her own suggestion, a cortège of princes of her own house, her sons, her sons-in-law, and grandsons, thirty-two in all. In other processions there figured representatives of Europe, India, and the colonies, all of whom brought her rich gifts. From India came a brilliant array of ruling princes. Europe sent among its envoys four kings: those of Saxony, of Belgium, of the Hellenes, and of Denmark, together with the crown princes of Prussia, Greece, Portugal, Sweden, and Austria. The pope sent a representative, the courtesy of whose presence the queen acknowledged next year by presenting the pope at the papal jubilee with a rich golden basin and ewer. The streets through which she and her guests passed were elaborately decorated, and her reception almost overwhelmed her in its warmth. Her route on the outward journey from Buckingham Palace lay through Constitution Hill, Piccadilly, Waterloo Place, and Parliament Street, and on her return she passed down Whitehall and Pall Mall. The first message that she received on reaching Buckingham Palace was an inquiry after her health from her aged aunt, the Duchess of Cambridge. The queen replied at once that she was 'very tired but very happy.' In the evening there were illuminations on a lavish scale in all the chief cities of her dominions, and at a signal given from the Malvern Hills at 10 p.m. beacon fires were lit on the principal promontories and inland heights of Great Britain from Shetland and Orkney to Land's End.

Next day the queen accepted a personal gift of 75,000*l.* subscribed by nearly three million women of England. A small part of this sum she applied to a bronze equestrian statue of the prince consort, by (Sir) Edgar Boehm, after Marochetti, to be erected on Smith's Lawn, Windsor Park, where she laid the foundation-stone on 15 July (she unveiled the statue 12 May 1890). The bulk of the women's gift she devoted to the foundation of a sick nurses' institute on a great scale, which was to provide trained attendants for

the sick poor in their own homes. Succeeding incidents in the celebration, in which she took a foremost part, included, apart from court dinners and receptions, a fête in Hyde Park on 22 June to twenty-six thousand poor school children; a visit to Eton on her return to Windsor the same evening; the laying of the foundation-stone of the Imperial Institute on 6 July; a review at Aldershot on 9 July; and a naval review on 29 July. The harmony subsisting between her and her prime minister she illustrated by attending a garden party given by him in honour of her jubilee at his house at Hatfield on 13 July.

The processions, reviews, and receptions proved no transient demonstration. Permanent memorials of the jubilee were erected by public subscription in almost every town and village of the empire, taking the form of public halls, clock towers, fountains, or statues. The celebration had historic significance. The mighty outburst of enthusiasm which greeted the queen, as loudly in the colonies and India as in the United Kingdom, gave new strength to the monarchy. Thenceforth the sovereign was definitely regarded as the living embodiment of the unity not merely of the British nation but of the British empire.

VII

But amid the jubilee festivities a new cloud was gathering over the royal house. Since the autumn of 1886 the crown prince, to whose future rule in Germany the queen had for nearly thirty years been looking forward with intense hope, was attacked by a mysterious affection of the throat. Early in June 1887 he was stricken with illness of the crown prince, and the crown princess came to England and settled at Upper Norwood in the hope of benefiting by change of environment. He was well enough to play a conspicuous part in the jubilee procession, when his handsome figure and his white uniform of the Pomeranian cuirassiers attracted universal admiration. Subsequently he stayed in the Isle of Wight and at Braemar, and he did not return to Germany till 14 Sept. The winter of 1887-8 he spent at San Remo, and it there became apparent that he was suffering from cancer. The queen, who completely identified herself with the happiness of her eldest daughter, was constantly with her and her husband while they remained in England or Scotland, and she suffered greatly from the anxiety. Nor was it lessened when, on 9 March 1888, the queen's old friend, the Emperor William I, died, and the crown which she and her

daughter had through earlier days longed to see on the crown prince's head was now at length placed there while he was sinking into the grave. But the queen did not abstain from rejoicings in another of her children's households. On 10 March she dined with the prince and princess of Wales at Marlborough House to celebrate their silver wedding, and at night, on her return to Windsor, she drove through London to witness the illuminations.

On 22 March she left England for a month's holiday at Florence. It was her first visit to the city, and it and its surroundings charmed her. King Humbert courteously paid her a visit on 5 April, and the attention pleased her. On 20 April she left for Germany, where she had resolved to visit the dying Emperor Frederick. On the journey—at Innsbruck—she was gratified by meeting the emperor of Austria. It was their second interview; the first was now nearly a quarter of a century old. On 21 April she drove through Berlin to Charlottenburg, her son-in-law's palace. But it was not solely to

bid farewell to the stricken prince that she had come. It was to mediate in a quarrel in her daughter's family, which was causing grave embarrassment in political circles in Berlin, and for which she was herself freely held responsible. Her own kindly interest in the young princes of Battenberg was shared by her eldest daughter. Of the three brothers, the eldest had married her granddaughter and the youngest her daughter. The second brother, Alexander, who was still unmarried, and was still no more than thirty-one, had had an adventurous career. For seven years he had been prince of Bulgaria, but he had incurred the distrust of the tsar, and in 1886, having been driven from his throne, retired to private life at Darmstadt. He, like his brothers, was personally known to the queen, whose guest he was at Windsor in 1879; she sympathised with his misfortunes, and she encouraged the notion that he also, like his brothers, might marry into her family. An opportunity was at hand. The second daughter of the Emperor Frederick, Victoria, fell in love with him, and a betrothal was arranged with the full approval of the young princess's mother and grandmother. But violent opposition was manifested at the German court. Prince Bismarck, chancellor of the empire, who had always been on hostile terms with the crown princess, denounced the match as the work of Queen Victoria, who had taken the Battenbergs under her protection. He declared that such a union was injurious to the interest of the German

royal family. Not merely did it humiliate the imperial house by allying it with a prince of inferior social standing, but it compromised the good relations of Berlin with St. Petersburg, where Prince Alexander was heartily disliked. Bismarck even credited the queen with a deliberate design of alienating Russia and Germany in the hope of bringing about an Anglo-German alliance against the tsar. When the queen reached Charlottenburg this awkward dispute was at its height. The Empress Frederick stood by her daughter, who was unwilling to abandon Prince Alexander. The dying emperor and his son, the Crown Prince William, in vain endeavoured to move her. Prince Bismarck threatened resignation unless Prince Alexander was summarily dismissed. On 24 April the queen, after much conversation with her daughter, boldly discussed the question in all its bearings with Prince Bismarck. He forced her to realise the complications that resistance to his will would raise, and, yielding to his power, she used her influence with her daughter and granddaughter to induce them to break off the engagement with Prince Alexander. Reluctantly they yielded. The Crown Prince William, who had stoutly opposed his mother, was by the queen's persuasion reconciled to her, and domestic harmony was restored. On the night of her interview with Bismarck, the queen attended a state banquet in the Charlottenburg Palace, and the reconciliation was ratified. None the less the queen always took a kindly interest in Prince Alexander, whose humiliation she deplored; and though she regretted his marriage next year (6 Feb. 1889) to Fräulein Loisinger, a singer at the Dresden and Darmstadt court theatres, she used no harsh language, merely remarking pathetically, 'Perhaps they loved one another.' The prince barely survived his marriage four years; he died on 17 Feb. 1893.

On 15 June 1888 the Emperor Frederick died. A week later the queen wrote from Windsor to her friend, Archbishop Benson: 'The contrast between this year and the last jubilee one is most painful and remarkable. Who could have thought that that splendid, noble, knightly prince—as good as he was brave and noble—who was the admiration of all, would on the very day year—(yesterday) be no longer in this world? His loss is indeed a very mysterious dispensation, for it is such a very dreadful public as well as private misfortune' (*Life of Archbishop Benson*, ii. 211). Court mourning prevented any celebration of the fiftieth anniversary of the queen's

coronation on 28 June. But on her visit to Balmoral in the autumn she took part in several public ceremonies. She stayed with Sir Archibald Campbell at Blythswood in Renfrewshire in order to open new municipal buildings at Glasgow, and to visit the exhibition there. She also went to Paisley, which was celebrating the fourth centenary of its incorporation as a borough. In November the widowed Empress Frederick was her mother's guest at Windsor for the first of many times in succeeding years; the queen showed her the unusual attention of meeting her on her landing in England at Port Victoria (19 Nov.)

During 1889 the queen's health was good and her activity undiminished. Her spring holiday was spent for the first time at Biarritz, in former days the favoured health resort of the queen's friend, the Empress Eugénie (6 March to 1 April). On 27 March she made an excursion into Spain to visit the queen-regent at San Sebastian. This was another new experience for an English sovereign. None before had set foot on Spanish soil, although Charles I and Charles II went thither as princes. On her return to England she was distressed by the death of her aunt, the Duchess of Cambridge, at the age of ninety-one (6 April). The final link with her childhood was thus severed. The queen wished the duchess to be buried at Windsor, but her aunt had left instructions that she should be buried beside her husband at Kew. The queen was present at her funeral on the 18th, and placed a wreath on the coffin. At the end of the month she paid a visit to her son at Sandringham, and on the 26th she witnessed there a performance by (Sir) Henry Irving and his company of 'The Bells' and the trial scene from 'The Merchant of Venice.' It was the second time that the queen had permitted herself to witness a dramatic performance since the prince consort's death. The first occasion, which was near the end of her twentieth year of widowhood, was also afforded by the prince and princess of Wales, who, when at Abergeldie Castle in 1881, induced the queen to come there and see a London company of actors perform Mr. Burnand's comedy of 'The Colonel' (11 Oct. 1881).

In May 1889 she laid the foundation-stone of new buildings at Eton (on the 18th), and she reviewed troops at Aldershot (on the 31st). On 3 June she presented at Windsor new colours to the regiment with which she had already closely identified herself, Princess Victoria's royal Irish fusiliers; she had presented colours to it in 1833 and 1866. Next

Spain.

day, 4 June, she witnessed at Eton for the first time the annual procession of boats which celebrated George III's birthday.

In the summer came difficulties which tried her tact and temper. She turned to consider the pecuniary prospects of her numerous grandchildren. Provision had already been made by parliament for every one of

The queen
and her
grand-
children.

her nine children and for her three first cousins, the Dukes of Cambridge and his sisters; and although the deaths of Princess Alice and Prince Leopold had caused a net reduction of 25,000*l.*, the sum annually assigned to members of this royal family, apart from the queen, amounted to 152,000*l.* No responsibility for providing for the German royal family, the offspring of her eldest daughter, the Empress Frederick, or for the family of the Princess Alice of Hesse-Darmstadt, attached to her; but she had twenty-two other grandchildren—domiciled in England—for whom she regarded it as her duty to make provision. In July 1889 events seemed to her to render an appeal to parliament in behalf of the third generation of her family appropriate. The elder son of the prince of Wales was coming of age, while his eldest daughter was about to marry with the queen's assent the Earl (afterwards Duke) of Fife. She therefore sent two messages to the House of Commons requesting due provision for the two older children of her eldest son. The manner in which her request was approached was not all she could have wished. New life was given to the old cry against the expenses of monarchy.

The queen's financial position still from time to time excited jealous comments, not only among her subjects, but in foreign countries. Exaggerated reports of the extent of her fortune were widely current, and small heed was paid to her efforts to correct this false impression. In 1885 it was stated with some show of authority that she had lately invested a million pounds sterling in ground

False reports
of her
wealth.

rents in the city of London. Through Sir Henry Ponsonby she denied that she had any such sum at her disposal. At Berlin, Bismarck often joked coarsely over her reputed affluence, to which he attributed this power she exerted over the Crown Prince Frederick and his household. But while the best friends of the crown deprecated such kind of criticism, they deemed it inexpedient for the country to undertake the maintenance indefinitely of the queen's family beyond the second generation. Both the extreme and the moderate opinions found free expression in the House of Commons, and calm observers like Lord Selborne

perceived in the discussion ominous signs of a recrudescence of republican sentiment. To the government's proposal to appoint a committee representative of all sections of the house to determine the principles which should govern the reply to the queen's messages, a hostile amendment to refer the whole question of the revenues of the crown to the committee was moved by Mr. Bradlaugh. He argued that the queen's savings on the civil list enabled her unaided to provide for her grandchildren, and that the royal grants were an intolerable burden on the people. The amendment was rejected by a majority of 188, but 125 votes were cast in its favour.

On the due appointment of the committee the government recommended, with the queen's approval, the prospective allocation to the prince of Wales's children of annuities amounting on their marriages to 49,000*l.*, besides a sum of 30,000*l.* by way of dowries. But the grant immediately payable was to be 21,000*l.* annually and 10,000*l.* for the dowry of the Princess Louise. Precedent, it was shown, justified public provision for all the children of the sovereign's sons. The daughters of former sovereigns had invariably married foreign reigning princes, and their children, not being British subjects, were outside the purview of the British parliament. The question whether the children of the sovereign's daughters who were not married to foreign reigning princes were entitled to public provision had not previously arisen. The queen and the government perceived that public opinion was not in this mood to permit lavish or unconditional grants, and it was soon apparent that a compromise would be needful. The queen disliked the debate, but showed a wish to be conciliatory. She at once agreed to forego any demand on behalf of her daughters' children; but although she demurred to a formal withdrawal of her claim on behalf of her younger son's children, she stated that she would not press it. Gladstone, whose faith in the monarchy was strong, and who respected the royal family as its symbol, was anxious to ward off agitation, and he induced the government to modify their original proposal by granting to the prince of Wales a fixed annual sum of 36,000*l.*, to be paid quarterly, for his children's support. This proposal was accepted by a majority of the committee; but when it was presented to parliament, although Gladstone induced Parnell and the Irish nationalists to support it, it met with opposition from the radical side of the house. Mr. Labouchere invited the house to re-

Wales's chil-
dren, 1889.

fuse peremptorily any grant to the queen's grandchildren. The invitation was rejected by 398 votes against 116. Mr. John Morley then moved an amendment to the effect that the manner of granting the 86,000*l.* to the prince of Wales left room for future applications from the crown for further grants, and that it was necessary to give finality to the present arrangement. Most of Gladstone's colleagues in the late government supported Mr. Morley, but his amendment was defeated by 355 votes against 134, and the grant of 86,000*l.* a year was secured (*Hansard*, 3rd ser. cccxxxvii. col. 1840 sq.) In the course of the debate and inquiry it was officially stated that the queen's total savings from the civil list amounted to 824,025*l.*, but that out of this sum much had been spent on special entertainments to foreign visitors. In all the circumstances of the case the queen accepted the arrangement gratefully, and she was not unmindful of the value of Gladstone's intervention. For a season she displayed unusual cordiality towards him. On 25 July, while the negotiation was proceeding, she sent to him and Mrs. Gladstone warm congratulations on their golden wedding. Meanwhile, on 27 June, she attended the marriage of her granddaughter, Princess Louise of Wales, to the Earl of Fife in the private chapel of Buckingham Palace.

After the thorny pecuniary question was settled, hospitalities to foreign sovereigns absorbed the queen's attention. In July 1889 she entertained, for a second time, the shah of Persia, and in August she welcomed her grandson, the German emperor William II, on his first visit to this country since his accession to his throne. The incident greatly interested her, and she arranged every detail of her grandson's reception. The emperor came to Cowes on his way to Osborne in his yacht *Hohenzollern*, accompanied by twelve warships. The queen held a naval review in his honour at Spithead, 8 Aug., and on 9 Aug. reviewed the seamen and marines of the German fleet at Osborne. All passed off happily, and she congratulated herself on the cordial relations which the visit established between the two countries. The young emperor gave proof of private and public friendship by causing the queen to be gazetted honorary colonel of his first regiment of horseguards, on which he bestowed the title of Queen of England's Own (12 Aug.) The emperor repeated his visit to Osborne next year, when a sham naval fight took place in his presence, and he came back in 1891, when he was officially

received in London, in 1898, 1894, and 1895. There was then a three years' interval before he saw the queen again.

During the last eleven years (1889-1901) of her long career the queen's mode of life followed in all essentials the fixed routine. Three visits to Osborne, two to Balmoral, a few days in London or in Alderley, shot, alternated with her spring vacation abroad and her longer sojourns at Windsor. Occasionally, in going to or returning from Balmoral or Osborne, she modified her route to fulfil a public or private engagement. In August 1889, on her way to Scotland, she made a short tour in Wales, which she had been contemplating for some ten years. For four days she stayed at Palé Hall, near Lake Bala. On the 26th, 'the dear prince's birthday,' she paid a visit to Bryntysilio near Llangollen, the residence of Sir Theodore and Lady Martin, both of whom were congenial acquaintances. She was gratified by the loyalty shown by the Welsh people, and thoroughly enjoyed the beauty of the scenery. On 14 May 1890 she paid a visit to Baron Ferdinand de Rothschild's château at Waddesdon Manor. On 26 July following she opened the deep-water dock at Southampton. On 26 Feb. 1891, at Portsmouth, she christened and launched the Royal Sovereign, the largest ironclad in her fleet, and the Royal Arthur, an unarmoured cruiser of new design. On 21 May 1891 she laid the foundation-stone of the new royal infirmary at Derby. On 21 May 1894 she revisited Manchester after an interval of thirty-seven years in order to open officially the great ship canal; on 21 May 1897 she went to Sheffield to open the new town hall; and on 15 Nov. 1899 she performed a last function in the English provinces, when she went to Bristol to open the convalescent home which had been erected to commemorate her length of rule.

Only in her foreign tours did she seek change of scene with any ardour. In 1890 her destination was Aix-les-Bains; in 1891, Grasse; and in 1892 Costebelle, near Hyères. In 1898 and again in 1894 she passed the spring at Florence for a second and a third time, and her delight in the city and neighbourhood grew with closer acquaintance. Each of these years King Humbert paid her a visit; and in 1894 Queen Margherita accompanied him. In 1896 she was at Cannes; both in 1896 and 1897 at Nice; and during the two successive years, 1898 and 1899, at Cimiez. On the homeward journey in 1890, 1892, and 1895 she revisited Darmstadt. On

her return in 1894 she paid a last visit to Coburg—the city and duchy which were identified with her happiest memories. There she was present, on 19 April 1894, at the intermarriage of two of her grandchildren—the Princess Victoria Melita of Coburg, the second daughter of her second son, Alfred, with the Grand Duke of Hesse, the only surviving son of her second daughter, Alice. On returning from Nice in March 1897, while passing round Paris, she was met at the station of Noisy-le-Sec by M. Faure, the president of the French Republic, who greeted her with every courtesy. On 5 May 1899 she touched foreign soil for the last time when she embarked at Cherbourg on her home-coming from Cimiez. She frequently acknowledged with gratitude the amenities which were extended to her abroad, and sought to reciprocate them. On 19 Aug. 1891 she welcomed the officers of the French squadron which was in the Channel under Admiral Gervais, and on 11 July 1895 she entertained the officers of an Italian squadron which was off Spithead under the Duke of Genoa.

The queen's court in her last years regained a part of its pristine gaiety. Music and the

Revival of drama and opera at court. drama were again among its recognised recreations. In February 1890 there were private theatricals and tableaux at Osborne, in which the queen's daughters took part, and in their preparation the queen took great personal interest. Next year, for the first time since the prince consort's death, a dramatic performance was commanded at Windsor Castle, 6 March 1891, when Messrs. Gilbert and Sullivan's comic opera of 'The Gondoliers' was performed. In 1894 the Italian actress, Signora Eleonora Duse, performed Goldoni's 'La Locandiera' before the queen at Windsor, and Mr. Tree acted 'The Red Lamp' at Balmoral. Her birthday in 1895 she celebrated by a performance there of Verdi's opera of 'Il Trovatore' in the Waterloo Chamber. On 26 June 1900 Mascagni's 'Cavalleria Rusticana' with a selection from 'Carmen' was given there, and on 16 July 1900 the whole opera of 'Faust.'

Domestic incidents continued to bring the queen alternations of joy and grief in abundant measure. In December 1891 she was gratified by the betrothal of Princess Mary (May), daughter of her cousin the Duchess of Teck, to the Duke of Clarence, older son of the prince of Wales, who was in the direct line of succession to the throne. But death stepped in to forbid the union. On 14 Jan. 1892 the duke died. The tragedy

for a time overwhelmed the queen. 'Was there ever a more terrible contrast?' she wrote to Tennyson; 'a wedding with bright hopes turned into a funeral!' In an address to her people she described the occasion as 'one more sad and tragical than any but one that had befallen her.' The nation fully shared her sorrow. Gladstone wrote to Sir William Harcourt: 'The national grief resembles that on the death of Princess Charlotte, and is a remarkable evidence of national attachment to the queen and royal family' (6 Feb. 1892). Lord Selborne foresaw in the good feeling thus evoked a new bond of affection between the queen and the masses of her people. On the Duke of Clarence's death, his brother George, duke of York, became next heir to the crown after his father; and on 8 May 1893

The Duke of York's marriage. the queen assented to his betrothal to the Princess May of Teck. Sorrow was thus succeeded by gladness. The Duke of York's marriage in the Chapel Royal at St. James's Palace on 6 July 1893, which the queen attended, revived her spirits; and she wrote to her people a letter full of hope, thanking them for their congratulations.

Another change in her domestic environment followed. On 22 Aug. 1893 her brother-in-law, Duke Ernest of Saxe-Coburg, died. The cordiality of her early relations with him was not maintained. She had never thought highly of his judgment, and his mode of life in his old age did not commend itself to her. His death gave effect to the arrangement by which the duchy of Saxe-Coburg-Gotha passed to her second son, Alfred, duke of Edinburgh; and he and his family thenceforth made Coburg their chief home. Thus the German principality, which was endeared to her through her mother's and her husband's association with it, was brought permanently under the sway of her descendants.

The matrimonial fortunes of her grandchildren occupied much of her attention next year. At the time of the Grand Duke of Hesse's marriage with a daughter of the new Duke of Saxe-Coburg, which she herself attended at Coburg (19 April 1894), she warmly approved the betrothal of the Tsarevitch Nicholas with another granddaughter—Alix, sister of the Grand Duke of Hesse. This was the most imposing match that any of her grandchildren had made, or indeed any of her children save her eldest daughter. Her second son was already the husband of a tsar's daughter. But this union brought the head of the Russian royal

Grand-children's marriages.

family into far closer relations with her own. Before the tsarevitch's marriage, the death of his father, Tsar Alexander III, on 1 Nov. 1894, placed him on the Russian throne. His marriage followed on 23 Nov. The queen gave an appropriately elaborate banquet at Windsor in honour of the event, and made the new Tsar Nicholas II—now the husband of her granddaughter—colonel-in-chief of the second dragoons (Royal Scots Greys). Meanwhile, on 23 June 1894, the birth of a first son (Edward) to the Duke and Duchess of York added a new heir in the fourth generation to the direct succession to her throne. The queen was present at the christening at White Lodge, Richmond, on 16 July. A year later she gave a hearty welcome to a foreign kinsman in the third generation, Carlos, king of Portugal, friendship with whose father and grandparents (Queen Maria II and her consort, Prince Ferdinand of Saxe-Coburg) she had warmly cherished. She celebrated King Carlos's visit by conferring on him the order of the Garter (9 Nov. 1895).

Politics at home had once more drifted in the direction which she dreaded. At the end of June 1892 the twelfth parliament of the reign was dissolved after a life of just six years, and a majority of home rulers was returned (355 to 315). Lord Salisbury waited for the meeting of parliament before resigning, but a vote of want of confidence was at once carried against him and he retired (12 Aug.). The queen had no choice but to summon Gladstone for a fourth time to fill the post of prime minister, and with the legislation that his new government prepared the queen found herself in no greater sympathy than on former occasions. Her objections to home rule for Ireland were rooted and permanent; but, though she was depressed by the passage of Gladstone's home rule bill through the House of Commons (27 July 1893), she rejoiced at its rejection by the House of Lords on 8 Sept. by the decisive majority of 378. As far as her reign was concerned the scheme then received its death-blow. She was spared further anxieties in regard to it, and the political horizon brightened for her. On

2 March 1904 Gladstone went to Windsor to resign his office owing to his age and failing health, and the queen accepted his resignation with a coldness that distressed him and friends. She did not meet him again. On 19 May 1898 he died, and though she felt sympathy with his relatives, and was grateful for the proofs he had given of attachment

to the monarchy, she honestly refrained from any unequivocal expression of admiration for his public labours. She was fully alive to the exalted view of his achievements which was shared by a large number of her subjects, and in a telegram to Mrs. Gladstone on the day of his funeral in Westminster Abbey she wrote with much adroitness of the gratification with which his widow must 'see the respect and regret evinced by the nation for the memory of one whose character and intellectual abilities marked him as one of the most distinguished statesmen of my reign.' But she did not commit herself to any personal appreciation beyond the concluding remark: 'I shall ever gratefully remember his devotion and zeal in all that concerned my personal welfare and that of my family.'

On Gladstone's resignation in 1894, the queen, by her own act and without seeking any advice, chose the Earl of Rosebery to succeed him (8 March). She had long known him and his family (his mother had been one of her bridesmaids), and she admired his abilities. But the government's policy underwent small change. The Welsh disestablishment bill, which was read a second time in the House of Commons on 1 April 1895, ran directly counter to her personal devotion to church establishments. Nor did she welcome the changes at the war office, which relieved her cousin, the Duke of Cambridge, of the commandership-in-chief of the army, and by strictly limiting the future tenure of the post to a period of five years gave the death-blow to the cherished fiction that the commander-in-chief was the sovereign's permanent personal deputy. But Lord Rosebery's government fell in June, and Lord Salisbury, to the queen's satisfaction, resumed power on the understanding that he would be permitted an early appeal to the country. In the new ministry the conservative leaders coalesced with the leaders of liberal unionists. The dissolution of parliament was followed by the return of the unionists in a strong majority, and the unionist party under Lord Salisbury's leadership retained power till her death. With Lord Salisbury and his unionist colleagues her relations were to the last harmonious. Her sympathy with the imperialist sentiments, which Mr. Chamberlain's control of the colonial office conspicuously fostered, was whole-hearted. As in the case of Peel and Disraeli, her first knowledge of him had not prepossessed her in his favour. When he was a leader of a radical section of the

Lord Rosebery prime minister.

The queen and Mr. Chamberlain.

liberal party she regarded him with active distrust; but his steady resistance to the policy of home rule, and his secession from the ranks of Gladstone's followers, dissipated her fears, and his imperialist administration of colonial affairs from 1895 till her death, was in complete accord with her sentiment. But, despite her confidence in her advisers, her energy in criticising their counsel never slackened. She still required all papers of state to be regularly submitted to her; she was impatient of any sign of carelessness in the conduct of public business, and she pertinaciously demanded full time for the consideration of ministers' proposals. She had lately resumed her early practice of signing commissions in the army, and when in 1895 the work fell into arrears and an appeal was made to her to forego the labour, she declined the suggestion. Her resolve to identify herself with the army never knew any diminution. Her public appearances came to have almost exclusively military associations. On 10 May 1892 she opened with much formality the Imperial Institute, but participation in civil ceremonial was rare in her closing years. On 4 July 1890 she inspected the military exhibition at Chelsea hospital. On 27 June 1892 she laid the foundation-stone of a new church at Aldershot, and witnessed the march past of ten thousand men. Next year, to her joy, but amid signs of public discontent, her son the Duke of Connaught took the Aldershot command. In July 1894 she spent two days there; on the 11th there was a military tattoo at night in her honour, and a review followed next day. In July 1896, July 1898, and June 1899 she repeated the agreeable experience. In 1898, besides attending a review, she presented colours to the 3rd battalion of the Coldstream guards.

Early in 1896 the military ardour which she encouraged in her immediate circle cost it a sad bereavement. At the end of 1895 Prince Henry of Battenberg, her youngest daughter's husband, who resided under her roof, volunteered for active service in Ashanti, where native races were in revolt against British rule. Invalided home with fever, the prince died on board H.M.S. *Blonde* on the way to Madeira on 20 Jan. 1896. His body was met on its arrival at Cowes on 5 Feb. by the queen and her widowed daughter, who accompanied it to its last resting-place in the church at Whippingham, where their marriage took place less than eleven years before. In the following autumn (22 Sept.—5 Oct.) she had the gratification of entertaining at Balmoral the Tsar Nicholas II and

her granddaughter the tsaritsa with their infant daughter. The tsar's father, grandfather, and great-grandfather had all been her guests in earlier days.

On 23 Sept. 1893 the queen achieved the distinction of having reigned longer than any other English sovereign. She had worn her crown nearly twice as long as any contemporary monarch in the world, excepting only the emperor of Austria, and he ascended his throne more than eleven years after her accession. Hitherto George III's reign of fifty-nine years and ninety-six days had been the longest known to English history. In 1897 it was resolved to

celebrate the completion of her sixtieth year of rule—her 'diamond jubilee'—with appropriate splendour. She readily accepted the suggestion that the celebration should be so framed as to emphasise that extension of her empire which was now recognised to have been one of the most imposing characteristics of her sovereignty. It was accordingly arranged that prime ministers of all the colonies, delegates from India and the dependencies, and representatives of all the armed forces of the British empire should take a prominent part in the public ceremonies. The main feature of the celebration was a state procession through London on 22 June. The queen made almost a circuit of her capital, attended by her family, by envoys from foreign countries, by Indian and colonial officials, and by a great band of imperial troops—Indian native levies, mounted riflemen from Australia, South Africa, and Canada, and coloured soldiers from the West Coast of Africa, Cyprus, Hongkong, and Borneo. From Buckingham Palace the mighty cortège passed to the steps at the west end of St. Paul's, where a short religious service was conducted by the highest dignitaries of the church. Thence the royal progress was continued, over London Bridge, through the poorer districts of London on the south side of the Thames. Buckingham Palace was finally reached across Westminster Bridge and St. James's Park. Along the six miles route were ranged millions of the queen's subjects, who gave her a rousing welcome which brought tears to her eyes. Her feelings were faithfully reflected in the telegraphic greeting which she sent as she set out from the palace to all parts of the empire: 'From my heart I thank my beloved people. May God bless them!' In the evening, as in 1897, every British city was illuminated, and every headland or high ground in England, Scotland, and Wales, from Cornwall to Caithness, was

Her interest in the army.

The diamond jubilee of 1897.

ablaze with beacons. The festivities lasted a fortnight. There was a garden party at Buckingham Palace on 28 June; a review in Windsor Park of the Indian and colonial troops on 2 July; a reception on 7 July of the colonial prime ministers, when they were all sworn of the privy council; and a reception on 18 July of 180 prelates of English-speaking protestant peoples who were assembled in congress at Lambeth. By an error on the part of officials, members of the House of Commons, when they presented an address of congratulation to the queen at Buckingham Palace on 28 June, were shown some want of courtesy. The queen repaired the neglect by inviting the members and their wives to a garden party at Windsor on 8 July. The only official celebration which the queen's age prevented her from attending in person was a great review of battleships at Spithead (26 June), which in the number of assembled vessels exceeded any preceding display of this kind. Vessels of war to the number of 173 were drawn up in four lines, stretching over a course of thirty miles. The queen was represented by the prince of Wales. Not the least of many gratifying incidents that marked the celebration was the gift to Great Britain of an ironclad from Cape Colony. On 18 July this close of the rejoicings drew from the queen a letter of thanks to her people, simply expressing her boundless gratitude. The passion of loyalty which the jubilee of 1887 had called forth was brought to a degree of intensity which had no historic precedent; and during the few years of life that yet remained to the queen it burned with undiminished force throughout the empire in the breasts of almost every one of her subjects, whatever their race or domicile.

The anxieties which are inseparable from the government of a great empire pursued the queen and her country in full measure during the rest of her reign, and her armies were engaged in active hostilities in many parts of the world. Most of her energies were consequently absorbed in giving characteristic proof of her concern for the welfare of her troops. She closely scanned the military expeditions on the frontier of India (1897-1899). The campaign of English and Egyptian troops under Lord Kitchener, which finally crushed the long-drawn-out rebellion in the Sudan at the battle of Omdurman on 2 Sept. 1898, and restored to Egypt the greater part of the territory that had been lost in 1883, was a source of immense gratification to her. In 1898 she

indicated the course of her sympathies by thrice visiting at Netley Hospital the wounded men from India and the Sudan (11 Feb., 14 May, and 8 Dec.) When at Balmoral, 29 Oct. 1898, she presented colours to the newly raised 2nd battalion of the Cameron highlanders. On 1 July 1899 she reviewed in Windsor Great Park the Honourable Artillery Company, of which the prince of Wales was captain-general, and a few days later (15 July) she presented in Windsor Castle colours to the Scots guards, afterwards attending a march past in the park. On 10 Aug., while at Osborne, she inspected the Portsmouth volunteers in camp at Ashley, and at Balmoral on 29 Sept. she presented new colours to the 2nd battalion of the Seaforth highlanders. Her chief public appearance during 1899, which was unconnected with the army, was on 17 May 1899, when she laid the foundation-stone of the new buildings of the Victoria and Albert Museum at Kensington. The South Kensington Museum, as the institution had hitherto been named, had been brought into being by the prince consort, and was always identified in the queen's mind with her husband's public services.

All other military experiences which had recently confronted the queen sank into insignificance in the autumn of 1899 in the presence of the great Boer war. With her ministers' general policy in South Africa before the war she was in agreement, although she studied the details somewhat less closely than had been her wont. Failing sight disabled her after 1898 from reading all the official papers that were presented to her, but her confidence in the wisdom of Lord Salisbury and her faith in Mr. Chamberlain's devotion to the best interests of the empire, spared her any misgivings while the negotiations with the Transvaal were pending. As in former crises of the same kind, as long as any chance remained of maintaining an honourable peace, she cherished the hope that there would be no war; but when she grew convinced that peace was only to be obtained on conditions that were derogatory to the prestige of her government she focussed her energies on entreaties to her ministers to pursue the war with all possible promptitude and effect. From the opening of active operations in October 1899 until conspicuousness failed her on her deathbed in January 1901, the serious conflict occupied the chief place in her thoughts. The disasters which befell British arms at the beginning of the struggle caused her infinite distress, but her spirit rose with the danger. Defeat merely

added fuel to the zeal with which she urged her advisers to retrieve it. It was with her especial approval that in December 1899 reinforcements on an enormous scale, drawn both from the regular army and the volunteers, were hurriedly ordered to South Africa under the command of Lord Roberts, while Lord Kitchener was summoned from the Soudan to serve as chief of the staff. In both generals she had the fullest trust.

Offers of assistance from the colonies stirred her enthusiasm, and she sent many messages of thanks. She was consoled, too, by a visit at Windsor from her grandson, the German emperor, with the empress and two of his sons, on 20 Nov.

1899. Of late there had been less harmony than of old between the courts of London and Berlin. A misunderstanding between the two countries on the subject of English relations with the Boer republics of South Africa had threatened early in 1896. The German emperor had then replied in congratulatory terms to a telegram from President Kruger informing him of the success of the Boers in repelling a filibustering raid which a few Englishmen under Dr. Jameson had made into the Transvaal. The queen, like her subjects, reprobated the emperor's interference, although it had none of the significance which popular feeling in England attributed to it. The emperor's visit to the queen and prince of Wales in November 1899 had been arranged before the Boer war broke out, but the emperor did not permit his display of friendly feeling to be postponed by the opening of hostilities. His meeting with the queen was most cordial, and his relations with the English royal family were thenceforth unclouded. By way of indicating his practical sympathy with the British army, he subscribed 300*l.* to the fund for the relief of the widows and orphans of the men of the 1st royal dragoons who were then fighting in South Africa—a regiment of which he was colonel-in-chief.

Throughout 1900 the queen was indefatigable in inspecting troops who were proceeding to the seat of war, in sending to the front encouraging messages, and in writing letters of condolence to the relatives of officers who lost their lives, often requesting a photograph and inquiring into the position of their families. In the affairs of all who died in her service she took a vivid personal interest. Her anxieties at Christmas 1899 kept her at Windsor and precluded her from proceeding to Osborne for the holiday season, as had been her in-

variable custom, with one exception, for nearly fifty years. On Boxing day she entertained in St. George's Hall, Windsor, the wives and children of the non-commissioned officers and men of the regiments which were stationed in the royal borough. She caused a hundred thousand boxes of chocolate to be sent as her personal gift to every soldier at the front, and on New Year's day (1900) forwarded greetings to all ranks. When the news of British successes reached her in the early months of 1900—the relief of Kimberley (15 Feb.), the capture of General Cronje (27 Feb.), the relief of Ladysmith (28 Feb.), the occupation of Bloemfontein (13 March), the relief of Mafeking (17 May), and the occupation of Pretoria (5 June)—she exchanged congratulations with her generals with abundant enthusiasm.

The gallantry displayed by the Irish soldiers was peculiarly gratifying to her, and she acknowledged it in a most emphatic fashion. On 2 March she gave permission to her Irish troops to wear on St. Patrick's day, by way of commemorating their achievements in South Africa, the Irish national emblem, a sprig of shamrock, the display of which had been hitherto forbidden in the army. On 7 March she came to London, and on the afternoon of 8th and 9th she drove publicly through many miles of streets in order to illustrate her watchful care of the public interests and her participation in the public anxiety. Public enthusiasm ran high, and she was greeted everywhere by cheering crowds. On 22 March she went to the Herbert Hospital, at Woolwich, to visit wounded men from South Africa. But the completest sign that she gave of the depth of her sympathy with those who were bearing the brunt of the struggle was her decision to abandon for this spring her customary visit to the South of Europe and to spend her vacation in Ireland, whence the armies in the field had been largely recruited. This plan was wholly of her own devising.

Nearly forty years had elapsed since she set foot in Ireland. In 1900, that interval political disaffection had been rife, and had unhappily discouraged her from renewing her acquaintance with the country. She now spent in Dublin, at the viceregal lodge in Phoenix Park, nearly the whole of April—from the 4th to the 26th. She came, she said, in reply to an address of welcome from the corporation of Dublin, to seek change and rest, and to revive happy recollections of the warm-hearted welcome given to her, her husband, and children in former days. Her reception was all that could be wished, and it vindicated her con-

Emperor William II's visit, November 1899.

The queen's sympathy with her soldiers.

fidence in the loyalty, despite political agitation, of the Irish people to the crown. The days were spent busily and passed quickly. She entertained the leaders of Irish society, attended a military review and an assembly of fifty-two thousand school children in Phoenix Park, and frequently drove through Dublin and the neighbouring country. On 5 April she gave orders for the formation of a new regiment of Irish guards. On her departure on 28 April she thanked the Irish people for their greeting in a public letter addressed to the lord lieutenant.

After her return to Windsor on 2 May 1900 she inspected the men of I.I.M.S. Powerful who had been besieged in Ladysmith, and warmly welcomed their commander, Captain Hedworth Lambton. On the 17th she visited the wounded at Netley. Lord Roberts's successes in South Africa at the time relieved her and her people of pressing anxieties, and ordinary court festivities were suffered to proceed. On 4 May she entertained at Windsor the king of Sweden and Norway, who had often been her guest as Prince Oscar of Sweden. On 10 May she held a drawing-room at Buckingham Palace; it was the only one she attended that season, and proved her last. Next day she was present at the christening of the third son of the Duke of York, when she acted as sponsor. After the usual visit to Balmoral (22 May to 20 June) she gave several musical entertainments at Windsor. On 11 June there was a garden party at Buckingham Palace, and on 28 June at Windsor a state banquet to the khedive of Egypt, who was visiting the country. Her old friend the Empress Eugénie was her guest at Osborne in September.

Apart from the war, she was interested during the session in the passage through the House of Commons of the Australian commonwealth bill, ^{The federation of Australia, 1900.} which was to create a federal union among the Australian colonies. She received at Windsor on 27 March the delegates from Australia, who were in England to watch the bill's progress. When in the autumn the bill received the royal assent, she, on 27 Aug., cordially accepted the suggestion that her grandson the Duke of York, with the duchess, should proceed as her representative to Australia in 1901, to open in her name the first session of the new commonwealth parliament. She was especially desirous of showing her appreciation of the part taken by colonial troops in the Boer war, and she directed that the inauguration of the commonwealth at Sydney on 1 Jan. 1901, should be attended by a guard

of honour representing every branch of the army, including the volunteers.

But the situation in South Africa remained the central topic of her thought, and in the late summer it gave renewed cause for concern. Despite Lord Roberts's occupation of the chief towns of the enemy's territory, fighting was still proceeding in the open country, and deaths from disease or wounds in the British ranks were numerous. The

queen was acutely distressed ^{Distresses of the war.} by the reports of suffering that reached her through the summer, but, while she constantly considered and suggested means of alleviating the position of affairs, and sought to convince herself that her ministers were doing all that was possible to hasten the final issue, she never faltered in her conviction that she and her people were under a solemn obligation to fight on till absolute victory was assured. Owing to the prevailing feeling of gloom the queen, when at Balmoral in October and November, allowed no festivities. The usual highland gathering for sports and games at Braemar, which she had attended for many years with the utmost satisfaction, was abandoned. She still watched closely public events in foreign countries, and she found little consolation there. The assassination of her friend Humbert, king of Italy, on 29 July at Monza greatly disturbed her equanimity. In France a wave of strong anti-English feeling involved her name, and the shameless attacks on her by unprincipled journalists were rendered the more offensive by the approval they publicly won from the royalist leader, the Duc d'Orléans, great-grandson of Louis Philippe, to whom and to whose family she had proved the staunchest of friends. Happily the duke afterwards apologised for his misbehaviour, and was magnanimously pardoned by the queen.

In October a general election was deemed necessary by the government—the existing parliament was more than five years old—and the queen was gratified by the result.

^{The new unionist House of Commons, October 1900.} Lord Salisbury's government, which was responsible for the war and its conduct, received from England and Scotland overwhelming support. The election emphatically supported the queen's view that, despite the heavy cost of life and treasure, hostilities must be vigorously pursued until the enemy acknowledged defeat. When the queen's fifteenth and last parliament was opened in December, Lord Salisbury was still prime minister; but he resigned the foreign secretaryship to Lord Lansdowne, formerly

minister of war, and he made with the queen's approval some unimpressive changes in the personal constitution of the ministry. Its policy remained unaltered.

Death had again been busy among the queen's relatives and associates, and cause for private sorrow abounded in her last years.

The queen's latest be-reavements. Her cousin and friend of youth, the Duchess of Teck, had passed away on 27 Oct. 1897. Another blow was the death at Meran of phthisis, on 5 Feb. 1899, of her grandson, Prince Alfred, only son of the Duke of Saxe-Coburg-Gotha. The succession to the duchies of Saxe-Coburg-Gotha, which was thus deprived of an heir, was offered by the diet of the duchies to the queen's third son, the Duke of Connaught; but, although he temporarily accepted it, he, in accordance with the queen's wish, renounced the position in his own behalf and in that of his son a few months later in favour of his nephew, the Duke of Albany, the posthumous son of the queen's youngest son, Leopold. To the queen's satisfaction the little Duke of Albany was adopted on 30 June 1899 as heir presumptive to the beloved principality. The arrangement unhappily took practical effect earlier than she anticipated. A mortal disease soon attacked the reigning duke of Saxe-Coburg, the queen's second son, Alfred, and he died suddenly at Rosenau on 30 July 1900, before a fatal issue was expected. The last bereavement in the royal circle which the queen suffered was the death, on 29 Oct. 1900, of her grandson, Prince Christian Victor of Schleswig-Holstein, eldest son of Princess Helena, the queen's second daughter. The young man had contracted enteric fever on the battlefields of South Africa. But even more distressing was it for the queen to learn, in the summer of 1900, that her eldest child, the Empress Frederick, was herself the victim of a malady that must soon end in death. Although the empress was thenceforth gravely disabled, she survived her mother rather more than six months.

On 7 Nov. the queen returned to Windsor from Balmoral in order to console Princess

Funeral migra-tions of the court. Christian on the death of her son, and twice before the end of this

month she took the opportunity of welcoming home a few of the troops from South Africa, including colonial and Canadian detachments. On each occasion she addressed a few words to the men. On 12 Dec. she made her last public appearance by attending a sale of needlework by Irish ladies at the Windsor town hall. On 14 Dec. she celebrated the thirty-ninth anniversary of the prince consort's death at Frog-

more with customary solemnity, and on the 18th she left for Osborne. It was the last journey of her life.

Throughout life the queen's physical condition was robust. She always believed in The queen's health in old age. the efficacy of fresh air and abundant ventilation, and those who waited on her had often occasion to lament that the queen never felt cold. She was long extremely careful about her health, and usually consulted her resident physician, Sir James Reid, many times a day. Although she suffered no serious ailments, age told on her during the last five or six years of her life. Since 1805 she suffered from a rheumatic stiffness of the joints, which rendered walking difficult, and from 1808 incipient cataract greatly affected her eyesight. The growth of the disease was steady, but it did not reach the stage which rendered an operation expedient. In her latest year she was scarcely able to read, although she could still sign her name and could write letters with difficulty. It was not till the late summer of 1900 that symptoms menacing to life made themselves apparent. The anxieties and sorrows due to the South African war and to deaths of relatives proved a severe strain on her nervous system. She manifested a tendency to aphasia, but by a strong effort of will she was for a time able to check its growth. She had long justly prided herself on the strength and precision of her memory, and the failure to recollect a familiar name or word irritated her, impelling increased mental exertion. No more specific disease declared itself, but loss of weight and complaints of sleeplessness in the autumn of 1900 pointed to a general physical decay. She hoped that a visit to the Riviera in the spring would restore her powers, but when she reached Windsor in November her physicians feared that a journey abroad might have evil effects. Arrangements for the removal of the court early next year to the Riviera were, however, begun. At Osborne her health showed no signs of improvement, but no immediate danger was apprehended.

On Christmas morning her lifelong friend and lady-in-waiting, Jane Lady Churchill, passed away suddenly in her sleep.

Last days at Osborne. The queen was greatly distressed, and at once made a wreath for this

coffin with her own hands. On 2 Jan. 1901 she nerved herself to welcome Lord Roberts on his return from South Africa, where the command-in-chief had devolved on Lord Kitchener. She managed by an effort of will briefly to congratulate him on his successes, and she conferred on him an earldom and

the order of the Garter. On the 10th Mr. Chamberlain had a few minutes' audience with her, so that she might learn the immediate prospect of South African affairs. It was her last interview with a minister. The widowed duchess of Saxe-Coburg-Gotha arrived on a visit, and, accompanied by her, the queen drove out on the 15th for the last time. By that date her medical attendants recognised her condition to be hopeless. The brain was failing, and life was slowly ebbing. On the 19th it was publicly announced that she was suffering from physical prostration. The next two days her weakness grew, and the children who were in England were summoned to her deathbed. On 21 Jan. her grandson, the German emperor, arrived, and in his presence and in the presence of two sons and three daughters she

The queen's death.

passed away at half-past six in the evening of Tuesday, 22 Jan. She was eighty-one years old and eight months, less two days. Her reign had lasted sixty-three years, seven months, and two days. She had lived three days longer than George III, the longest-lived sovereign of England before her. Her reign exceeded his, the longest yet known to English history, by nearly four years. On the day following her death her eldest son met the privy council at St. James's Palace, took the oaths as her successor to the throne, and was on the 24th proclaimed king under the style of Edward VII.

In accordance with a dominant sentiment of her life the queen was accorded a military funeral. On 1 Feb. the yacht

Her funeral.

Alberta, passing between long lines of warships which fired a last salute, carried the coffin from Cowes to Gosport. Early next day the remains were brought to London, and were borne on a gun carriage from Victoria station to Paddington. In the military procession which accompanied the cortege, every branch of the army was represented, while immediately behind the coffin rode King Edward VII, supported on one side by his brother, the Duke of Connaught, and on the other by his nephew, the German emperor. They were followed by the kings of Portugal and of Greece, most of the queen's grandsons, and members of every royal family in Europe. The funeral service took place in the afternoon, with imposing solemnity, in St. George's Chapel, Windsor. On Monday, 4 Feb., the coffin was removed privately, in the presence only of the royal family, to the Frogmore mausoleum, and was there placed in the sarcophagus which already held the remains of Prince Albert.

No British sovereign was more sincerely mourned. As the news of the queen's death

The universal sorrow.

spread, impassioned expressions of grief came from every part of the United Kingdom, of the British empire, and of the world. Native chieftains in India, in Africa, in New Zealand, vied with their British-born fellow-subjects in the avowals of a personal sense of loss. The demonstration of her people's sorrow testified to the spirit of loyalty to her person and position which had been evoked by her length of life and reign, her personal sorrows, and her recent manifestations of sympathy with her subjects' welfare. But the strength and popularity which the grief at the queen's death proved the monarchy to enjoy were only in part due to her personal character and the conditions of her personal career. A force of circumstances which was not subject to any individual control largely contributed to the intense respect and affection on the part of the people of the empire which encircled her crown when her rule ended. The passion of loyalty with which she in-

The queen and imperial unity.

spired her people during her last years was a comparatively late growth. In the middle period of her reign the popular interest, which her youth, innocence, and simplicity of domestic life had excited at the beginning, was exhausted, and the long seclusion which she maintained after her husband's death developed in its stead a coldness between her people and herself which bred much disrespectful criticism. Neither her partial resumption of her public life nor her venerable age fully accounts for the new sentiment of affectionate enthusiasm which greeted her declining days. It was largely the outcome of the new conception of the British monarchy which sprang from the development of the colonies and dependencies of Great Britain, and the sudden strengthening of the sense of unity between them and the mother country. The crown after 1880 became the living symbol of imperial unity, and every year events deepened the impression that the queen in her own person typified the common interest and the common sympathy which spread a feeling of brotherhood through the continents that formed the British empire. She and her ministers in her last years encouraged the identification of the British sovereignty with the unifying spirit of imperialism, and she thoroughly reciprocated the warmth of feeling for herself and her office which that spirit engendered in her people at home and abroad. But it is doubtful if, in the absence of the imperial idea for the creation of which she

was not responsible, she could under the constitution have enjoyed that popular regard and veneration of which she died in unchallenged possession.

The practical anomalies incident to the position of a constitutional sovereign who is in theory invested with all the semblance of power, but is denied any of its reality or responsibility, were brought into strong relief by the queen's personal character and the circumstances of her life. Possessed of no commanding strength of intellect but of an imperious will, she laboriously studied every detail of government business, and on every question of policy or administration she formed for herself decided opinions, to which she obstinately adhered, pressing them ^{Her attitude to business of state.} pertinaciously on the notice of her ministers. No sovereign of England ever applied himself to the work of government with greater ardour or greater industry. None was a more voluminous correspondent with the officers of state. Although the result of her energy could not under the constitution be commensurate with its intensity, her activity was in the main advantageous. The detachment from party interests or prepossessions, which her elevated and isolated position came to foster in her, gave her the opportunity of detecting in ministerial schemes any national peril to which her ministers might at times be blinded by the spirit of faction, and her persistence occasionally led to some modification of policy in the direction that she urged with happy result. Her length of sovereignty, too, rendered in course of years her personal experiences of government far wider and far closer than that of any of her ministers, and she could recall much past procedure of which she was the only surviving witness. Absolutely frank and trustful in the expression of her views to her ministers, she had at the same time the tact to acquiesce with outward grace, however strong her private objections, in any verdict of the popular vote, against which appeal was seen to be hopeless. In the two instances of the Irish church bill of 1869 and the franchise extension bill of 1884 she made personal efforts, in the interest of the general peace of the country, to discourage an agitation which she felt to be doomed to failure. While, therefore, she shrank from no exertion whereby she might influence personally the machinery of the state, she was always conscious of her powerlessness to enforce her opinions or her wishes. With the principle of the constitution which imposed on the sovereign the obligation of giving formal

assent to every final decision of his advisers, however privately obnoxious it might be to him, she had the practical wisdom to avoid any manner of conflict.

Partly owing to her respect for the constitution in which she was educated, partly ^{The decay of royal power.} owing to her personal idiosyncrasies, and partly owing to the growth of democratic principles among her people, the active force of such prerogatives as the crown possessed at her accession was, in spite of her toil and energy, diminished rather than increased during her reign. Parliament deliberately dissolved almost all the personal authority that the crown had hitherto exercised over the army. The prerogative of mercy was practically abrogated when the home secretary was in effect made by statute absolute controller of its operations. The distribution of titles and honours became in a larger degree than in former days an integral part of the machinery of party politics. The main outward signs of the sovereign's formal supremacy in the state lost, moreover, by her own acts, their old distinctness. Conservative as was her attitude to minor matters of etiquette, she was self-willed enough to break with large precedents if the breach consorted with her private predilections. During the last thirty-nine years of her reign she opened parliament in person only seven times, and did not prorogue it once after 1854. It had been the rule of her predecessors regularly to attend the legislature at the opening and close of each session, unless they were disabled by illness, and her defiance of this practice tended to weaken her semblance of hold on the central force of government. Another innovation in the usages of the monarchy, for which the queen, with a view ^{Innovations in royal practice.} to increasing her private convenience, was personally responsible, had a like effect. Her three immediate predecessors on the throne never left the country during their reigns. Only three earlier sovereigns of modern times occasionally crossed the seas while wearing the crown, and they were represented at home in their absence by a regent or by lords-justices, to whom were temporarily delegated the symbols of sovereign power, while a responsible minister was the sovereign's constant companion abroad. Queen Victoria ignored nearly the whole of this procedure. She repeatedly visited foreign countries; no regent nor lords-justices were called to office in her absence; she was at times unaccompanied by a responsible minister, and she often travelled privately and informally under an assumed title of inferior

rank. The mechanical applications of steam and electricity which were new to her era facilitated communication with her, but the fact that she voluntarily cut herself off from the seat of government for weeks at a time—in some instances at seasons of crisis—seemed to prove that the sovereign's control of government was in effect less constant and essential than of old, or that it might, at any rate, incur interruption without in any way impairing the efficiency of the government's action. Her withdrawal from parliament and her modes of foreign travel alike enfeebled the illusion which is part of the fabric of a perfectly balanced monarchy that the motive power of government resides in the sovereign.

In one other regard the queen, by conduct which can only be assigned to care for her personal comfort at the cost of the public advantage, almost sapped the influence which the crown can legitimately exert on the maintenance of a healthy harmony among the component parts of the United Kingdom. Outside England she bestowed markedly steady favour on Scotland. Her sojourns there, if reckoned together, occupied a period of time approaching seven years. She spent in Ireland in the whole of her reign a total period of less than five weeks. During fifty-nine of her sixty-three years of rule she never set foot there at all. Her visit in her latest year was a triumph of robust old age and a proof of undiminished alertness of sympathy. But it brought into broad relief the neglect of Ireland that preceded it, and it emphasised the errors of feeling and of judgment which made her almost a complete stranger to her Irish subjects in their own land during the rest of her long reign.

The queen's visits to foreign lands were intimately associated with her devotion to her family which was a ruling principle of her life. The kinsmen and kinswomen with whom her relations were closest were German, and Germany had for her most of the associations of home. She encouraged in her household many German customs, and with her numerous German relatives maintained an enormous and detailed correspondence. Her patriotic attachment to her own country of England and to her British subjects could never be justly questioned, and it was her cherished conviction that England might and should mould the destinies of the world; but she was much influenced in her view of foreign policy by the identification of her family with Germany, and by her natural anxiety to protect the interests of

ruling German princes who were lineally related to her. It was 'a sacred duty,' as she said, for her to work for the welfare of Prussia, because her eldest daughter had married the heir to the Prussian crown. As a daughter and a wife she felt bound to endeavour to preserve the independence of the duchy of Saxe-Coburg-Gotha, whence her mother and husband sprang. Her friendship for Belgium was a phase of her affection for her uncle, who sat on its throne. The spirit of patriotic kingship was always strong enough in her to quell hesitation as to the path she should follow when the interest of England was in direct conflict with that of her German kindred, but it was her constant endeavour to harmonise the two.

Although the queen disliked war and its inevitable brutalities, she treated it as in certain conditions a dread necessity which no ruler could refuse to face. Thoroughly as she valued peace, she deemed it wrong to purchase it at the expense of national rights or dignity. But she desired that warfare should be practised with all the humanity that was possible, and she was deeply interested in the military hospitals and in the training of nurses. The queen's wealth of domestic affection was allied to a tenderness of feeling and breadth of sympathy with mankind generally, which her personal sorrows accentuated. She spared no exertion personally to console the bereaved, to whatever walk of life they belonged, and she greatly valued a reciprocation of her sympathy. Every instance of unmerited suffering that came to her notice—as in the case of Captain Dreyfus in France—stirred her to indignation. Nor were animals—horses and dogs—excluded from the scope of her compassion. To vivisection she was strenuously opposed, denouncing with heat the cruelty of wounding and torturing dumb creatures. She countenanced no leniency in the punishment of those guilty of cruel acts.

The queen was not altogether free from that morbid tendency of mind which comes of excessive study of incidents of sorrow and suffering. Her habit of accumulating sepulchral memorials of relations and friends was one manifestation of it. But it was held in check by an innate cheerfulness of disposition and by her vivacious curiosity regarding all that passed in the domestic and political circles of which she was the centre. She took a deep interest in her servants. She was an admirable hostess, personally consulting her guests' comfort. The ingenuousness of youth was never wholly extinguished in her. She was easily amused,

and Ireland.

Her tem-
perament.

The queen's
foreign
relations.

and was never at a loss for recreation. Round games of cards or whist she abandoned in later years altogether; but she sketched, played the piano, sang, did needlework until old age.

The queen's artistic sense was not strong. In furniture and dress she preferred the fashions of her early married years to any other. She was never a judge of painting, and she bestowed her main patronage on portrait painters like Winterhalter and Von Angeli, and on sculptors like Boehm, who had little beyond their German nationality to recommend them. 'The only studio of a master that she ever visited was that of Leighton, whose "Procession of Cimabue" the prince consort had bought for her, and whom she thought delightful, though perhaps more as an accomplished and highly agreeable courtier than as a painter.' In music she showed greater taste. Staunch to the heroes of her youth, she always appreciated the operas of Rossini, Bellini, and Donizetti; Handel and Bach bored her, but Mendelssohn also won her early admiration, and Gounod and Sullivan fascinated her later. She never understood or approved Wagner or his school. She was devoted to the theatre from girlhood, and all her enthusiasm revived when in her last years she restored the dramatic performances at court, which her mourning had long interrupted. She was not well read, and although she emulated her husband's respect for literature, it entered little into the business or recreation of her life.

In talk she appreciated homely wit of a quiet kind, and laughed without restraint when a jest or anecdote appealed to her. Subtlety or indelicacy offended her, and sometimes evoked a scornful censure. Although she naturally expected courtesy of address, and resented brusque expression of contradiction or dissent, she was not conciliated by obsequiousness. 'It is useless to ask —'s opinion,' she would say; 'he only tries to echo mine.' Her own conversation had often the charm of naïveté. When told that a very involved piece of modern German music, to which she was listening with impatience, was a 'drinking song' by Rubinstein, she remarked, 'Why, you could not drink a cup of tea to that.' Her memory was unusually sound, and errors which were made in her hearing on matters familiar to her she corrected with briskness and point.

The queen's religion was simple, sincere, and undogmatic. Theology did not interest her, but in the virtue of religious toleration she was an ardent believer. When Dr. Creighton, the last bishop of London of her

reign, declared that she was the best liberal he knew, he had in mind her breadth of religious sentiment. On moral questions her views were strict. She was opposed to the marriage of widows. To the movement for the greater emancipation of women she was thoroughly and almost blindly antipathetic. She never realised that her own position gave the advocates of women's rights their strongest argument. With a like inconsistency she regarded the greatest of her female predecessors, Queen Elizabeth, with aversion, although she resembled Queen Elizabeth in her frankness and tenacity of purpose, and might, had the constitution of the country in the nineteenth century permitted it, have played as decisive a part in history. Queen Victoria's sympathies were with the Stuarts and the Jacobites. She declined to identify Prince Charles Edward with his popular designation of 'the Young Pretender,' and gave in his memory the baptismal names of Charles Edward to her grandson, the Duke of Albany. She was deeply interested in the history of Mary Stuart; she placed a window in Carisbrooke Church in memory of Charles I's daughter Elizabeth (1850), and a marble tomb by Marochetti above her grave in the neighbouring church of St. Thomas at Newport (1856). She restored James II's tomb at St. Germain. Such likes and dislikes reflected purely personal idiosyncrasies. It was not Queen Elizabeth's mode of rule that offended Queen Victoria; it was her lack of feminine modesty. It was not the Stuarts' method of government that appealed to her; it was their fall from high estate to manifold misfortune. Queen Victoria's whole life and action were, indeed, guided by personal sentiment rather than by reasoned principles. But her personal sentiment, if not altogether removed from the commonplace, nor proof against occasional inconsistencies, bore ample trace of courage, truthfulness, and sympathy with suffering. Far from being an embodiment of selfish whim, the queen's personal sentiment blended in its main current sincere love of public justice with staunch fidelity to domestic duty, and ripe experience came in course of years to imbue it with the force of patriarchal wisdom. In her capacity alike of monarch and woman, the queen's personal sentiment proved, on the whole, a safer guide than the best devised system of moral or political philosophy.

VIII

Of her nine children (four sons—Albert Edward, prince of Wales, Alfred, Arthur, and Leopold—and five daughters—Victoria,

Alice, Helena, Louise, and Beatrice), two sons, Leopold and Alfred, and one daughter, Alice, died in the queen's lifetime.

The queen's descendants.

She was survived by two sons—the prince of Wales and Arthur duke of Connaught—and by four daughters—Victoria, Empress Frederick, Helena, Princess Christian, Louise, Duchess of Argyll, and Beatrice, Princess Henry of Battenberg. The eldest daughter, Victoria (Empress Frederick), died on 5 Aug. 1901 at her seat, Friedrichshof, near Frankfurt. All her children were married, and all except the Princess Louise had issue. The queen's grandchildren numbered thirty-one at the date of her death—nine died in her lifetime—and her great-grandchildren numbered thirty-seven. Seventeen of her grandchildren were married. In two instances there was intermarriage of first cousins—viz. Grand Duke of Hesse (Princess Alice's only surviving son) with Princess Victoria Melita (Prince Alfred's second daughter), and Prince Henry of Prussia (Princess Royal's second son) with Princess Irene Marie (Princess Alice's third daughter). Other marriages of her grandchildren connected her with the chief reigning families of Europe. The third daughter of the Princess Royal (Empress Frederick), Princess Sophie Dorothea, married in 1889 the Duke of Sparta, son of the king of Greece. Princess Alice's youngest daughter (Princess Alix Victoria) married in 1894 Nicholas II, tsar of Russia, while Princess Alice's second daughter (Elizabeth) married the Grand Duke Serge of Russia, a younger son of Tsar Alexander II and

Her grandchildren.

uncle of Tsar Nicholas II. Prince Alfred's eldest daughter (Princess Marie) married in 1893 Ferdinand, crown prince of Roumania. Princess Maud, youngest daughter of the prince of Wales, married in 1896 Prince Charles of Denmark. Only one grandchild married a member of the English nobility, the prince of Wales's eldest daughter, who became the wife of the Duke of Fife. The remaining seven marriages of grandchildren were contracted with members of princely families of Germany. The Emperor William II married Princess Victoria of Augustenburg. The Princess Royal's daughters, the Princesses Charlotte, Frederika Victoria, and Margareta Beatrice, married respectively the hereditary Prince of Saxe-Meiningen (in 1878), Prince Adolphe of Schaumburg-Lippe (in 1890), and Prince Frederick Charles of Hesse-Cassel (in 1893). Princess Alice's eldest daughter (Victoria) married in 1884 Prince Louis of Battenberg. Prince Alfred's third daughter (Alexandra) married in 1896

the hereditary Prince of Hohenlohe-Langenburg. Princess Helena's elder daughter (Louise Augusta) married in 1891 Prince Aribert of Anhalt.

There was one marriage in the queen's lifetime in the fourth generation of her family. On 24 Sept. 1898 the eldest of her great-grandchildren, Féodora, daughter of the hereditary Princesses of Saxe-Meiningen (Princess Royal's eldest daughter), married Prince Henry XXX of Reuss.

The queen's portrait was painted, drawn, sculptured, and photographed several hundred times in the course of the reign. None are satisfactory presentments. The queen's features in repose necessarily omit

Portraits of the queen.

suggestion of the animated and fascinating smile which was the chief attraction of her countenance. Nor is it possible graphically to depict the exceptional grace of bearing which compensated for the smallness of her stature. Among the chief paintings or drawings of her, those of her before her accession are by Sir William Beechey, R.A. (with the Duchess of Kent), 1821; by Richard Westall, R.A., 1830; by Sir George Hayter, 1833; and by R. J. Laue, A.R.A., 1837. Those after her accession are by Alfred Chalon, in state robes (engraved by Cousins), 1838; by Sir George Hayter, 1838; by Sir David Wilkie, 1839 (in Glasgow Gallery); by Sir Edwin Landseer (drawing presented by the queen to Prince Albert), 1839; by F. Winterhalter, 1845 and other years; by Winterhalter (group with Prince Arthur and Duke of Wellington), 1848; by Sir Edwin Landseer, 1866; by Baron H. von Angeli, 1876 (of which many replicas were made for presents, and a copy by Lady Abercromby is in the National Portrait Gallery, London), 1886 and 1897; by Mr. W. Q. Orchardson, R.A. (group with prince of Wales, Duke of York, and Prince Edward of York), 1900; and by M. Benjamin Constant, 1900. There are several miniatures by Sir W. O. Rose, R.A., and one by Robert Thorburn, A.R.A. (with prince of Wales as a child). There is a clever caricature lithographic portrait, by Mr. William Nicholson, 1897. Every leading episode in the queen's life was commemorated on her commission by a painting in which her portrait appears. Most of these memorial paintings, many of which have been engraved, are at Windsor; a few are at Buckingham Palace or Osborne. They include Sir David Wilkie's 'The Queen's First Council,' 1837; C. R. Leelis's 'The Queen receiving the Sacrament at her Coronation,' 1838, and 'The Christening of the Princess Royal,' 1841; Sir George Hayter's 'Corona-

tion,' 'The Queen's Marriage,' 1840, and 'Christening of the Prince of Wales,' F. Winterhalter's 'The Reception of Louis Philippe,' 1844; E. M. Ward's 'The Queen investing Napoleon III with the Garter' and 'The Queen at the Tomb of Napoleon,' 1855; G. H. Thomas's 'Review in Paris,' 1855; J. Phillip's 'Marriage of Princess Royal,' 1859; G. H. Thomas's 'The Queen at Aldershot,' 1859; W. P. Frith's 'Marriage of the Prince of Wales,' 1863; G. Magnussen's 'Marriage of Princess Helena,' 1866; Sydney P. Hall's 'Marriage of the Duke of Connaught,' 1879; Sir James Linton's 'Marriage of the Duke of Albany,' 1882; R. Caton Woodville's 'Marriage of the Princess Beatrice,' 1885; Laurenz Tuxen's 'The Queen and Royal Family at Jubiles of 1887,' Sydney P. Hall's 'Marriage of the Duchess of Fife,' 1889; Tuxen's 'Marriage of the Duke of York,' 1893. The sculptured presentations of the queen, one or more examples of which is to be found in almost every city of the empire, include a bust by Behnes, 1829 (in possession of Lord Ronald Gower); an equestrian statue by Marochetti at Glasgow; a statue by Boehm at Windsor; a large plaster bust by Sir Edgar Boehm (in National Portrait Gallery, London); a statue at Winchester by Mr. Alfred Gilbert, R.A.; a statue at Manchester by Mr. Onslow Ford, R.A., 1900. A national memorial in sculpture, designed by Mr. Thomas Brock, R.A., has been placed in the Mall opposite the entrance to Buckingham Palace.

The portrait head of the queen on the coinage followed three successive types in the course of the reign. Soon after her accession William Wyon designed from life a head which appears in the silver and gold coinage with the hair simply knotted, excepting in the case of the florin, where the head bears a crown for the first time since the coinage of Charles II. In the copper coinage a laurel wreath was intertwined with the hair. In 1887 Sir Edgar Boehm designed a new bust portrait, showing the features in mature age with a small crown and veil most awkwardly placed on the head. This ineffective design was replaced in 1893 by a more artistic crowned presentment from the hand of Mr. Thomas Brock, R.A.

Of medals on which her head appears the majority commemorate military or naval achievements, and are not of great artistic note (cf. JOHN H. MARO's *Medals and Decorations of the British Army and Navy*, 1897). Many medals commemorating events in the queen's reign were also struck by order of

the corporation of London (cf. CHARLES WELCH's *Numismata Londinensia*, 1894, with plates). Of strictly official medals of the reign the chief are that struck in honour of the coronation from designs by Pistrucci in 1838; the jubilee medal of 1887, with the reverse designed by Lord Leighton; and the diamond jubilee medal of 1897, with Wyon's design of the queen's head in youth on the reverse, and Mr. Brock's design of the head in old age on the obverse with the noble inscription: 'Longitudo dierum in dextera eius et in sinistra gloria.'

The adhesive postage stamp was an invention of the queen's reign, and was adopted by the government in 1840. A crowned portrait head of the queen was designed for postage stamps in that year, and was not modified in the United Kingdom during her lifetime. In most of the colonies later postage stamps bore a portrait of the queen in old age.

[A life of Queen Victoria based on this article appeared in 1902. There are contemporary biographic sketches by Sir R. R. Holmes, formerly librarian at Windsor (with elaborate portrait illustrations, 1887, and text alone, 1901), by Mrs. Oliphant, by the Rev. Dr. Tulloch, by the Marquis of Lorne (fourth duke of Argyll), by Sarah Tooley, by G. Barnett Smith, and by J. Cordy Jeaffreson (1893, 2 vols.) The outward facts of her reign are best studied in the Annual Register from 1837 to 1900, together with the Times newspaper, Haasard's Parliamentary Debates, and the collected edition of Poch. A vast library of memoirs of contemporaries supplies useful information. For the years before and immediately after the accession, see Mrs. Gerald Gurney's *Childhood of Queen Victoria*, 1901; Tuer's *First Year of a Silkeo Reign*; *Memoir of Gabriela von Billow* (Engl. transl.), 1897; *Earl of Albemarle's Fifty Years of my Life*; *Stafford House Letters*, 1891, pt. vi.; and Sir Charles Murray's papers in Cornhill Mag. 1897. The portion of the queen's career which has been dealt with most fully is her married life, 1840-61, which is treated in General Gray's *Early Years of the Prince Consort*, 1886, and in Sir Theodore Martin's *Life of the Prince Consort*, 6 vols. 1874-80. Both works drew largely on her and her husband's journals and letters. Both General Gray and Sir Theodore Martin write from the queen's point of view; some memoirs published since the appearance of these volumes usefully supplement the information. An important selection from the queen's correspondence between 1837 and 1861 was issued officially in 1897, under the editorship of Viscount Esher and Mr. A. C. Benson. The best authority for the general course of the queen's life and her relations with political history down to 1860 is, apart from this correspondence, to be

found in the three series of the Greville Memoirs (1817-60), which are outspoken, and in the main trustworthy. The Duke Ernest of Saxe-Coburg's Memoirs, 4 vols. (English transl. 1888-90), throw side lights on the queen's personal relations with Germany and German politics, and print many of her letters; they carry events from 1840 to 1870. The early years of the same period are covered by the Memoirs of Baron von Bunsen and by Memoirs of Baron von Stockmar, by his son (Engl. transl. 2 vols. 1892). Other hints from the German side may be gleaned in Th. von Bernhardt's *Aus dem Leben*, pt. v. 1895; Memoirs of Count von Beust; Memoirs of Count Vitzthum von Eckstadt; Moltke's Letters to his wife and other Relatives, ed. Sidney Whitman (2 vols. 1896); Margaretha von Poschinger's Life of Emperor Frederick (Engl. transl. by Whitman, 1901); Bismarck's Reflections and Reminiscences (2 vols. 1898, Engl. transl.); and Busch's Conversations of Bismarck (3 vols. 1897). For the English relations with Napoleon III (1851-68) see De la Gorce's *Histoire du Second Empire* (6 vols.) The queen's domestic life from 1838 to 1870 may be traced in Letters from Sarah, Lady Lyttelton, 1797-1870 (privately printed for the family, 1873); from 1803 to 1873 in the Letters of Princess Alice, with memoir by Dr. Soll (Engl. transl. 1884); from 1842 to 1882 in the queen's Leaves (1868), and *More Leaves* (1883) from her Journal in the Highlands; and from 1860 to 1897 in Sir Kinloch Cooke's Life of the Duchess of Teck, 3 vols. 1900. Both court and diplomatic affairs (1837-68) are sketched in Lady Bloomfield's Court and Diplomatic Life (1893, 2 vols.), and diplomatic affairs alone (1837-1870) in Lord Augustus Loftus's Reminiscences, 2 series (4 vols. 1892-4). For home politics see Torrens's Life of Lord Melbourne; the Creevey Papers; the Croker Papers; the Peel Papers (a specially valuable work); Sir Spencer Walpole's Life of Lord John Russell (a most useful biography); Bulwer and Ashley's Life of Lord Palmerston; Lord Malmesbury's Memoirs of an Ex-Minister; Benham and Davidson's Life of Archbishop Tait (1891); Lord Selborne's Memorials; Gladstone's Gleannings, vol. i.; Childers's Life of Hugh C. E. Childers (1901); Morley's Life of Gladstone, 1903; Fitzmaurice's Life of Lord Granville, 1905; Sir Algernon West's Recollections. Personal reminiscences of the queen in private life abound in Donald Macleod's Life of Norman Macleod (2 vols. 1876), Mrs. Oliphant's Life of Principal Tulloch (1888), Prothero's Life of Dean Stanley, Lord Tennyson's Memoir of Lord Tennyson, Benson's Memoirs of Archbishop Benson, and Sir Theodore Martin's Queen Victoria as I Knew Her (1908), all print some letters of hers. A character sketch is in Quarterly Rev., April 1901. Slighter particulars are in Trevor-Lyn's Life of Macaulay; Ashwell and Wilberforce's Life of Bishop Wilberforce (3 vols. 1879); Reid's Lord Houghton and W. E. Forster; Fanny Kemble's Records; Lang's Lord Iddeleigh; Maxwell's Life

of W. H. Smith; Sir Theodore Martin's Life of Helena Faucit, Lady Martin (1900); Sir John Mowbray's Seventy Years at Westminster; Laughton's Life of Henry Reeve (1899); W. A. Lindsay's The Royal Household (1897); Lord Ronald Gower's Reminiscences; and Wilkinson's Reminiscences of King Ernest of Hanover. In the preparation of this article the writer has utilised private information derived from various sources.] S. L.

VOGEL, SIR JULIUS (1835-1896), premier of New Zealand, son of Albert Leopold Vogel and his wife Phæbe, daughter of Alexander Isaac of Russell Square, London, was born in London on 24 Feb. 1835. He was educated at University College School, London, and at the Royal School of Mines. Both his parents died when he was sixteen, and after serving as a merchant's clerk in his grandfather's office he emigrated to the gold-fields of Victoria, where, after gaining a livelihood by various shifts, he became editor of a small country newspaper, 'The Maryborough and Junolly Advertiser.' After being beaten in an attempt to enter the Victorian parliament he was drawn in 1861 to Otago, New Zealand, by the large discoveries of gold then made there, and, settling in Dunedin, bought a half-share in the 'Otago Witness' and started the 'Otago Daily Times.' As brother-editor and partner he had the novelist, Mr. B. L. Furseon. He quickly made his paper what it still is, one of the leading morning journals in the colony, and with its help was chosen in 1862 a member of the Otago provincial council. There in 1866 he became, and for three years remained, head of the provincial executive.

Vogel's entry into the New Zealand House of Representatives was made in 1863, and six years later he was appointed colonial treasurer in the cabinet of Sir William Fox [q. v. Suppl.] To the treasury were soon added the post office and the departments of customs and telegraphs, and he became the moving mind of what was quickly called the Fox-Vogel ministry. In 1869 the colony, still struggling with the native tribes, was exhausted by nearly a decade of intermittent and inglorious warfare with them, and it was embarrassed by English disfavour and the low price of its staple export, wool. The imperial troops had been withdrawn, and though, with some reluctance, the imperial government guaranteed a loan of 1,000,000*l.* to enable the colonists to carry on the warfare with their own militia, the colony and the provinces owed some 7,000,000*l.*, and were depressed and disheartened. Vogel believed that if peace could be secured the great natural resources of the islands might be

rapidly developed by making roads, bridges, railways, and telegraphs with money borrowed by the colony in London. His proposed to raise 10,000,000*l.* for this work, and to take as security five million acres of land adjacent to the proposed railway lines. His parliament authorised the borrowing of 4,000,000*l.*, but refused to touch the public lands, which were the endowment of the provinces. Except during one month in 1892, when Sir Edward Stafford ejected the Fox-Vogel ministry, Vogel remained in office for seven years, and was always at the head of affairs, though not always premier. The Maori wars were honourably ended, public works were rapidly pushed on, immigrants poured in, the San Francisco mail service was begun, and a cable laid between New Zealand and Australia. The ballot act was passed, the Torrens land transfer system adopted, the public trust office opened, and the government life insurance department set up. Finally (1874-6) Vogel, hitherto accounted a provincialist, allied himself with Stafford and Atkinson, and abolished the provinces. Immediately afterwards he appointed himself agent-general in London, and, resigning the premiership, quitted the colony.

Vogel left New Zealand prosperous and confident. Nearly all the money he had borrowed had been wisely spent. Unfortunately, no steps were taken to check speculation in land, which went on wildly, especially in the south island. This, combined with a steady decline in the prices of wool and grain, brought about a reaction in 1879, the effects of which lasted for fifteen years, and which was popularly attributed to Vogel's policy of public works and loans. In 1877 an imperial act was passed confirming an arrangement made by Vogel in 1875 with the Bank of England, by which colonial stocks were authorised to be inscribed there, to the great advantage of the borrowing colonies. In 1880 Vogel, who had been knighted in 1875, was a candidate for election to the British House of Commons; he stood for Penryn as a conservative, but was beaten. In 1881 he resigned the agent-generalship, as the New Zealand government objected to his connection with certain public companies, and in 1884 re-entered New Zealand politics. Elected for Christchurch by a large majority he was welcomed back to the colonial parliament by numbers who hoped from his resourceful, inventive, and sanguine mind some scheme or policy which might restore cheerfulness and prosperity to the overclouded colony. Since lavish borrowing had for the time gone out of fashion, the

phrase 'Vogel with the brake on' was caught up as representing the combination of enterprise with prudence, which a coalition between Vogel and the radical party was expected to bring about. The coalition was arranged, the Atkinson ministry was ousted, and Vogel became treasurer once more, under the radical chief, Sir Robert Stout. Fate, however, did not aid the Stout-Vogel government. Prices, low in 1884, fell still further in 1885; the largest financial institution in the colony, the Bank of New Zealand, showed signs of embarrassment; the customs revenue declined; and Vogel, who had come into office to reduce taxation, found himself obliged in 1887 to admit a heavy deficit and ask for more taxes. The ministry was defeated, appealed to the country, and was beaten. Sir Robert Stout and many of his section disappeared from parliament, and though Vogel was returned with a substantial following, he did not prolong the struggle, but, after leading the opposition unsuccessfully for one session, quitted the colony finally.

Thereafter poverty and bodily infirmities combined to keep him out of public life. He lived quietly near London, where for the last three years of his life he held a small post, under the New Zealand government, the duties of which were nominal, and the salary 300*l.* In addition to this quasi-pension the colony after his death gave his widow 1,500*l.* Vogel died at Hillersdon, East Molesey, on 12 March 1890. His physical sufferings had been great. For many years he had been tortured by gout, afflicted with deafness, and partly paralysed in the lower limbs. The courage and buoyant spirit which helped him to struggle against his afflictions, to toil over complicated financial problems in a sick-room, and to direct a colonial political party from a bath-chair, were not the least admirable of his qualities. Bold and sanguine as he was in temperament, his constitutional hastiness did not prevent his manner in private life from being uniformly kind, considerate, and even patient towards those around him. A speculator, though without greed or hardness, his rashness in his private affairs gave colour to the harsh verdict of the many critics who declared that in public life he was a gambler masquerading as a statesman. This was not true. The policy of developing colonies by borrowing and spending state loans is obviously open to abuse. But it would be more easy to show that those who followed in Vogel's footsteps went too far and too fast than that he himself wasted public money uselessly. Finance apart, he left his mark on the institutions of New Zealand;

the public trust and state life insurance offices have flourished; women's franchise, proposed by him in 1887, became law in 1893; the conservation of the New Zealand forests, which he unsuccessfully prayed for, is now a recognised necessity; the extension of British influence in the South Seas, advocated by him in 1874, then dismissed as a dream by the colonists, and which, when he attempted it at Samoa in 1886, was thwarted by the colonial office, was a scheme the scouting of which most Australasians now regret. Vogel's imperialism, as set out in many magazine and newspaper articles, though vague and dreamy, was in effect an anticipation of the views of a subsequently popular school. Curious mixture as he was of visionary and financier, his visions were often tinged with realism, just as his finance was inspired by imagination. Industrious as well as original in administration, he was a persuasive and copious rather than a brilliant or incisive talker and speaker. He wrote clearly and easily on political matters,

though his solitary novel, 'Anno Domini 2000, or Woman's Destiny,' written late in life, has little merit. His other publications were: 'Great Britain and her Colonies' (London, 1865, 8vo) and 'New Zealand and the South Sea Islands' (London, 1878). He also edited the 'Official Handbook of New Zealand' for 1875.

Vogel, who was a Jew of the Ashkenazim, married, on 19 March 1867, Mary, daughter of William Henry Clayton, colonial architect, New Zealand, and left two sons and a daughter. Another son was killed when cut off with Major Wilson's force by the Matabele in 1894.

P. R.

W

WALKER, JOHN (1692?-1741), a Cambridge scholar and coadjutor of Bentley in his proposed edition of the Græco-Latin Testament, was son of Thomas Walker of Huddersfield, and was educated, like Bentley, at Wakefield school, where he was under Edward Clarke. He entered Trinity College, Cambridge, as a pensioner on 24 May 1710, at the age of seventeen. He was Craven scholar in 1712. He graduated B.A. in 1713, and was elected minor fellow on 28 Sept. 1716 (see E. Rieu, *Diary*, ed. Luard, Cambridge, 1860). He took his M.A., and was elected socius major and sublector tertius in 1717.

Walker was amiable and attractive, and ready to work with others, as well as learned. The firstfruits of his studies that have come down to us are emendations on Cicero, 'De Natura Deorum,' printed at the end of the edition of Dr. John Davies, master of Queens' College, in 1713, and honourably mentioned in the preface. They are mostly bold or ingenious conjectures, after the manner of Bentley, and show a wide range of reading. Pearce also incorporated some notes of Walker's in his edition of the 'De Officiis' in 1745 (see p. xiv). While working for the New Testament he also helped Bentley with various readings of manuscripts of Suetonius and Cicero's 'Tusculans.' For his own part he was preparing an edition of Arno-

bis, and left large materials for the purpose to Dr. Richard Mead [q. v.] One valuable volume of this collection now belongs to Professor J. E. B. Mayor of Cambridge, and contains notes and conjectures well worthy of attention, as well as collations of the Paris and Antwerp manuscripts, the second of which is a copy from the first, and was then at Brussels.

In the summer or autumn of 1719 he went to Paris, as Bentley's emissary, for the purpose of collecting various readings for the proposed Græco-Latin New Testament, which had been projected by Bentley about 1716. J. J. Wetstein had been first employed; but, after Wetstein's return to Switzerland, Bentley was naturally glad to have one of his own scholars as his confidential assistant. Walker was kindly received at Paris, especially by the Benedictines, and, after some suspicion of a clash of literary interests between their project for an edition of the 'Versio Italica' and Bentley's undertaking, he was aided by them in his work. Thuillier, Sabatier, Mopinot, and Montfaucon were his chief friends, and the latter regarded him as a son. He remained in Paris apparently nearly a year. Bentley thus writes of him at the end of his 'Proposals,' published in 1720: 'The work will be put in the press as soon as money is contributed to support the charge of the impression. . . .'

The overseer and corrector of the press will be the learned Mr. John Walker of Trinity College in Cambridge; who with great accuracy has collated many MSS. at Paris for the present edition. And the issue of it, whether gain or loss, is equally to fall on him and the author.' Walker had, in fact, collated the whole New Testament in five Latin manuscripts at Paris, and part of it in nine others, besides noting the readings of four Tours manuscripts collated by Léon Chevallier, which were given him by Sabatier. These collections are contained in the volume numbered B. 17. 5, in the library of Trinity College, Cambridge (ELLIS, pp. xxxv foll.; *Old Lat. Bibl. Texts*, i. 85, foll., where they are all identified). Next year (1721) he returned to Paris, this time to collate Greek texts. The readings of the manuscripts from the Royal, Coislin, St. Germain, and Colbert collections in Trinity College (B. 17. 42, 43) probably belong to this date or to the following years. The winter of 1721-2 was, however, spent in Brussels in the company of Charles Graham, third viscount Preston (*d.* 1789), grandson of James II's ambassador at Paris. Here Walker collated the manuscript of Arnobius (and Minucius Felix) already mentioned, and the Corsendonk Greek Testament (now at Vienna, Imp. Lib., cursive 3), and succeeded in identifying many of the manuscripts used by Lucas Brugensis. When the fear of the plague had abated, Walker returned to Paris, and seems to have remained there till 1723.

Bentley had communicated his undertaking to Archbishop Wake in 1716, and this naturally led to intercourse between the archbishop and Walker. The first extant evidence of this is a letter from Walker at Brussels, 24 Nov. 1721 (*Old Lat. Bibl. Texts*, i. 66), in answer to a kind one of Wake's, perhaps the beginning of their friendship. Wake showed him many marks of favour, and Walker collated a great number of his manuscripts. These collations are found, some in B. 17. 42, 43, and others in B. 17. 34. A selection of Walker's readings is also found in a Greek Testament in Christ Church Library, where the Wake MSS. themselves are (WAKE, *Arch. Gr.* 85). Altogether Walker seems to have collated some seventy-eight Greek manuscripts, containing the whole or parts of the New Testament.

His course of promotion was as follows: He became dean and rector of Bocking, Essex, in the archbishop's patronage, 15 Nov. 1725. At Lady day 1726 he received his last dividend as fellow of Trinity. He be-

came chancellor of St. David's on 17 July 1727. His marriage followed six months later, 26 Jan. 1727-8. He was made B.D. under royal commission (together with Richard Walker the vice-master) on 26 April 1728. A year later Wake appointed him archdeacon of Hereford on 3 Feb. 1728-9, and on 12 Dec. 1730 he was instituted rector of St. Mary Aldermary in the same patronage. He also became incumbent of St. Thomas the Apostle in the same year. He was also chaplain to King George II. He died on 9 Nov. 1741, at the early age of forty-eight.

Walker married Charlotte Sheffield, one of the three natural daughters of the well-known John Sheffield, duke of Normanby and Buckinghamshire (*d.* 1721) [q. v.], by Frances Stewart, who afterwards married Hon. Oliver Lambert (she *d.* 1750-1). These daughters (and their brother) took the name of Sheffield under their father's will. Mrs. Walker had a fortune of some 6,000*l.*, and bore her husband six sons and four daughters. One of their sons, Henry, became fellow of King's College, B.A. 1757, M.A. 1760. Mrs. Walker is described as 'a woman of violent and turbulent temper, but professed much respect for her husband, to whom she erected a monument in the chancel of Bocking church, with a laudatory character' (*Old Lat. Bibl. Texts*, i. 66), which all extant evidence confirms. It asserts that his 'uncommon learning and sweetness of temper, joined to all other Christian perfections, and accompanied with a pleasing form of body, justly rendered him the delight and ornament of mankind.'

The later course of his studies and the reasons for the collapse of his great literary project are matters of conjecture and inference. He certainly went on collating Greek manuscripts till after 1735, as the Greek Testament numbered B. 17. 44, 45 is one of J. Wetstein and G. Smith's, Amsterdam, 1735, and contains collations of manuscripts, some of them brought to Archbishop Wake in that year. Wake died in 1737, and left his manuscripts to Christ Church, Oxford, and therefore Walker's work on them was probably done before that. Bentley himself was in perpetual strife in his later years, and had a paralytic stroke in 1739. Walker's own health was delicate, and he may have had warnings of approaching death. Something of the kind seems necessary to explain the fact that Bentley, making his will on 29 May 1741 (six months before Walker's death), left his Greek manuscripts brought from Mount Athos to the college, and 'the rest and residue of his library' (including, apparently, Walker's collations in the

volumes now at Trinity College) to his nephew Richard, and did not mention Walker. Bentley himself died six months after his younger friend. There is no trace of a quarrel between them. It seems therefore that Walker's premature death was the chief cause of the failure of all this preparation, and the operation of this simple circumstance has been strangely overlooked by Bentley's biographers. Bentley used to call Walker 'Clarissimus Walker,' probably to distinguish him from his two contemporaries at Trinity College, Richard the vice-master and Samuel.

Walker's collations of Latin manuscripts are decidedly better than Bentley's, although they are not as perfect as his reputation for scholarship and his neat writing would lead one to hope.

[Life of Bentley [q. v.] and Old Latin Biblical Texts, i. (St. Germain, St. Matthew, Oxf. 1883, esp. pp. v, xxiii-xxvi, 56-67; Gent. Mag. 1741, p. 609; Hennessy's Nov. Rep. Eccl. 1808, pp. cxxx, 300, 302. The contents of the volumes at Trinity College are given (not quite accurately) in A. A. Ellis's *Bentley Critica Sacra*. Information has also been supplied by friends at Cambridge and elsewhere. Walker's will, which has been consulted, is at Somerset House.]

JOHN SARUM.

WALLACE, ROBERT (1831-1899), divine and member of parliament, second son of Jasper Wallace, master gardener, was born near Cupar, Fife, on 24 June 1831. He was educated at the Geddes Institution, Culross, the High School, Edinburgh, and at St. Andrews University, where he won special distinction and graduated M.A. in 1853. After teaching for some time in private families, and attending the 1853-4 session at the Divinity Hall, Edinburgh, he was appointed on 22 April 1854 classical master at the Madras Academy, Cupar, Fife. In October 1855 he resumed his theological studies at Edinburgh University. He was licensed to preach in 1857, and shortly afterwards appointed to the charge of Newton-on-Ayr, whence he removed in 1860 to Trinity College Church, Edinburgh. In 1866 he was appointed examiner in philosophy in the university of St. Andrews, and two years later the Edinburgh corporation presented him with the charge of Old Greyfriars. In 1869 the university of Glasgow conferred upon him the degree of D.D.

Wallace as a churchman was noted for the support he gave both in the Edinburgh presbytery and in the general assembly of the church of Scotland to broad views on theology and to the reform of worship, of which Dr. Robert Lee (1804-1868) [q. v.]

was the chief champion. To the latter controversy he contributed 'Reform of the Church of Scotland in Worship, Government, and Doctrine,' and to the former an essay on 'Church Tendencies in Scotland,' published in 'Recess Studies' (Edinburgh, 1870), which led to much controversy, and ultimately to his impeachment for heresy. In 1872 he was appointed by the crown to the chair of church history in Edinburgh University, and his ecclesiastical and political opponents protested. The controversy which followed was one of the most exciting in the recent annals of the church of Scotland. Wallace won mainly owing to his own remarkable powers as a debater, but in 1876 he determined to leave the church, and became editor of the 'Scotsman' newspaper.

For some years previously he had been contributing to that newspaper, but his editorship was not a success, and he resigned in 1880. In 1881 he entered the Middle Temple, and in 1883 was called to the bar. In 1886 he was elected to parliament as a radical to represent East Edinburgh, and his connection with the constituency lasted until his death. In parliament he maintained an unusual independence, and though he took only an occasional part in the debates, he kept up the reputation he had won in the ecclesiastical courts. While about to address the House of Commons on 5 June 1899 he fell down in a fit, and died in Westminster hospital on the following day. He was buried in Kensal Green cemetery.

He was married in 1858 to Margaret, daughter of James Robertson of Cupar, who predeceased him; by her he had four sons and a daughter.

Wallace wrote frequently for the magazines, but in addition to fugitive controversial matter he published little. His inaugural address as professor of church history, 'The Study of Ecclesiastical History in its Relations to Church Theology,' was published in Edinburgh, 1873. At the time of his death he was engaged on a biography of George Buchanan, since completed (Edinburgh, 1899), and on his own reminiscences, which will be included in his 'Life.'

[Hew Scott, *Fasti Ecclesie*, x. i. 156, xi. i. 151, &c.; Lawson's *Reminiscences* (private circulation); *Scotsman*, 7 June 1899; Biography by Sheriff Campbell Smith and Mr. Wallace is in preparation.] J. R. M.

WARBURTON, SIR ROBERT (1842-1899), warden of the Khyber, born in a Ghilzai fort between Jagdallak and Ganda-

mak on 11 July 1842, was the only son of Robert Warburton (d. 10 Nov. 1864), lieutenant-colonel in the royal artillery, by his wife, a noble Afghan lady, niece of the Amir Doet Muhammad. At the time of his birth his mother was flying from the troopers of Sardar Muhammad Akbar Khán, who pursued her for months after the massacre of English at Kábul on 1 Nov. 1841. She was sheltered by her relatives, and finally rejoined her husband on 20 Sept. 1842. At the close of the Afghan war Robert and his mother accompanied his father's battery to Sipri, whence they removed to Morar in Gwalior. In 1850 he was placed at school at Mussoorie under Robert North Maddock, where he remained until 1 Dec. 1856. He was then sent to England, and was placed at Kensington grammar school under G. Frost. Thence he obtained a cadetship, and after one term at Addiscombe and two at the Royal Military Academy at Woolwich he obtained his commission in the royal regiment of artillery on 18 Dec. 1861. In 1862 he was sent to India and stationed with the 1st battery of the 24th brigade at Fort Govindghar, the fortress of Amritsar. In August 1864 he exchanged into the F battery of the 18th brigade and was stationed at Mian Mir. In 1866 the failure of the Agra and Masterman's bank left him with only his pay to support himself and his mother. To increase his resources he exchanged into the 21st Punjab infantry. This regiment was then under orders for the Abyssinian campaign, and disembarked at Zoula on 1 Feb. 1868. While serving with the transport train he showed great tact in conciliating native feeling and received the thanks of Sir Robert Napier (afterwards Baron Napier) [q. v.] for his services. When he was invalided to England Napier interested himself in his behalf, and wrote to the lieutenant-governor of the Punjab recommending him for employment on the frontier. On his return to India in April 1869 he was attached as a probationer to the 15th Ludhiána Sikhs, and in July 1870 he was appointed to the Punjab commission as an assistant commissioner to the Pesháwar division. At the end of September 1872 he was removed temporarily to the sub-district of Yusufzai and stationed at Hoti-mardán, and in February 1876 he was permanently appointed. Under Sir Pierre Louis Napoleon Cavagnari [q. v.] he took part in several enterprises against the hill tribes who persisted in raiding British territory, particularly against the Utmán Khel in 1878, and was five times complimented by the government of the Punjab and thrice by the secretary of state for India. In 1879,

during the Afghan campaign, Cavagnari made repeated applications for his services, but the Punjab government refused to spare him. In July, however, he was appointed political officer of the Khyber, a post which he held for eighteen years.

On the news of the murder of Cavagnari at Kábul, Warburton was nominated chief political officer with General Sir R. O. Bright, commanding the Jalálábád field force. He joined the force on 10 Oct. and proceeded to Jalálábád to ascertain the revenues of the district. In April 1890 he was invalided to England, and he did not return to the Khyber Pass until 16 Feb. 1882. From that time he remained on the frontier almost continuously until his retirement. He obtained a remarkable influence over the hill tribes, due in part no doubt to his Afghan blood. He raised the Khyber rifles from among these tribes, a force which for many years kept the pass tranquil. His camp became the rendezvous of mutually hostile tribesmen, who carefully refrained from hostilities so long as they remained within its precincts. He was accustomed to travel with no weapon but a walking-stick, and everywhere met with demonstrations of attachment. Able to converse fluently with the learned in Persian and with the common folk in the vernacular Pushto, he succeeded, by his acquaintance with tribal life and character, in gaining an influence over the border Afghans which has never been equalled. In 1881 he attained the rank of major, and in 1887 that of lieutenant-colonel. On 1 Jan. 1890, in recognition of his services, he was created C.S.I. In 1893 he was nominated to the brevet rank of colonel. He resigned his post on 11 July 1897 and received the thanks of the Punjab government. He had frequently requested government to give him an English assistant who might continue his policy and succeed to his influence after his retirement. This request was never granted, and the advent of a successor without local experience was at once followed by disquiet. On the outbreak of excitement among the Afridis in August, he was asked by the Indian government on 13 Aug. whether he was willing to resume his service in connection with the Khyber Pass and the Afridis. He declared himself willing, but on 23 Aug., before definite orders had been given, hostilities broke out. He served with the Tirah expedition of 1897-8, and in 1898 he was created K.C.I.E. The hardships of the Tirah campaign wore out his frame and the loss of the Khyber posts broke his heart. He returned to England with broken health, and dying at 8 Russell

Road, Kensington, on 22 April 1899, was buried at Brompton cemetery on 27 April. In 1868 he married Mary, eldest daughter of William Cecil of Dyffrin, Monmouthshire.

Warburton's reminiscences of his life were published in 1900 under the title 'Eighteen Years in the Khyber,' London, 8vo.

[Eighteen Years in the Khyber (with portraits); Times, 24, 25, 28 April 1899.]

E. I. O.

WARD, MARY (1585-1645), founder of a female order modelled on the rule of the jeauits, born at Mulwith, near Ripon, on 28 Jan. 1584-5, was the eldest child of Marmaduke Ward of Givendale, Mulwith, and Newby, in the West riding of Yorkshire, by his wife Uranla, daughter of Robert Wright (d. 1594) of Plowland in Ilolderness, and widow of John Constable (d. 1581) of Hatfield in the same district. John Wright (1568?-1605) [q. v.] was Mary's uncle. She was at baptism named Jane, a name which at her confirmation was changed to Mary. Her parents were Roman catholics, and she was educated in the same faith. At the age of five she went to live at Plowland with her grandmother, Ursula Wright, the daughter of Nicholas Rudaton of Ilayton in the East riding. On the death of her grandfather in 1594 she returned to Mulwith, but the household was broken up by the persecution of 1597-8, and she was entrusted to her kinewoman, Mrs. Ardington of Harewell, a daughter of Sir William Ingleby of Ripley. From 1600 to 1606 she resided with the wife of Sir Ralph Babthorpe of Osgodby and Babthorpe, near York. Her birth and her great beauty attracted numerous suitors, but her heart was set on the monastic life, and in 1606 she proceeded to St. Omer, and entered the community of the Colettines, the severest order of St. Clare. Somewhat against her inclination she was appointed to collect alms from the townspeople, her own desire being for greater solitude and contemplation. Moreover, as a lay sister she was not subject to the rule of St. Clare, but to the less rigorous discipline of the third order of St. Francis. In May 1607 she left the convent, resolved on founding a community especially for Englishwomen. She repaired to the court of the archdukes at Brussels, and in spite of considerable opposition obtained land for a convent near Gravelines. On Christmas eve she commenced her community in a temporary dwelling at St. Omer, with five English nuns transferred from 'the Walloon monastery' in that city. In 1609, however, she left this convent also, after endowing it with most of her possessions.

She returned to St. Omer, after a visit to England, accompanied by five young English ladies, with whom she founded a community in the Grosse Rue, which chiefly concerned itself with the education of girls, and did not bind itself to the life of strict seclusion which was characteristic of most female orders. In 1611, after a severe illness, she resolved, in consequence of a supernatural communication, to adopt the rules of the Society of Jesus for her community, adapting them for the use of women. About 1611 the first affiliated community was established in London at Spitalfields. By 1617 the number of inmates in the parent community had increased to sixty persons, and in that year a second subordinate community was established at Liège, Mary Ward herself removing to the new house. During the next few years she travelled constantly in England and the Low Countries, and on one occasion was arrested and thrown into prison in London. In 1620 and 1621 she was occupied in founding houses in Köln and Trier.

At the close of 1621, finding considerable opposition arising to her order, she resolved to proceed to Rome, where she arrived on Christmas eve. She immediately submitted to Gregory XV a memorial, stating that she and her companions had by divine appointment taken upon them the rule of life of the jesuits, and requesting the establishment of an order under his sanction. Finding that the English clergy were hostile and passed strictures on the conduct of her house in London, she requested leave on 1 July 1622 to establish a house in Rome, that her plan might be made a matter of observation. Her request was granted, schools for girls were instituted, and the community was quickly organised.

For more than a year affairs went well, but renewed trouble arose at the close of that period. In June 1625, in consequence of fresh charges brought against Mary of preaching publicly in London before an altar, and similar absurdities, the schools were closed by the order of Urban VIII. In November 1626, despairing of obtaining the ratification of her order, Mary determined to proceed to England through Germany. At Milan she was received with great respect by the saintly cardinal archbishop, Federigo Borromeo. Passing through Tyrol she arrived at Munich, where the elector, Maximilian I, permitted her and her companions to remain, and gave them a residence and a yearly allowance for their maintenance. In 1627 the Emperor Ferdinand invited Mary to Vienna, and provided a foundation

for her in that city. The dislike aroused by her independent action pursued her to Germany, and in July 1628, in consequence of a communication from the Archbishop of Vienna, Cardinal Klesel, a private congregation was called by Urban VIII, when it was decided that measures should be taken through the legates of the various countries to break up the houses of the institute without issuing a papal bull. Warned of the imminence of the peril Mary set out for Rome, but owing to illness was unable to reach the city until February 1629. After laying her case before Urban VIII and the cardinals she returned to Munich, and thence proceeded to Vienna. The report of the suppression rapidly spread; but on hearing that Mary was to be imprisoned as a heretic, the emperor refused to allow the measures against her to be carried into effect at Vienna. Unwilling to be a cause of strife, she removed to Munich, where on 7 Feb. 1630-1 she was arrested and confined in the Anger convent. The unhealthiness of her prison brought on an illness that was almost fatal. Her friends, however, interested themselves in her behalf, and on 15 April she was released by a papal mandate. During her imprisonment a papal bull for the suppression of the institute had been issued; but, owing to the favour of Maximilian, Mary and her companions were permitted to remain in their abode at Paradeiser Haus in Munich. In April 1632 she again set out for Rome to intercede for the dispersed members of her sisterhood, who were undergoing great hardships. She was well received by Urban VIII, who seemed won by her patience under trial, and gave her permission to establish a new house in Rome itself. In October 1634 she took possession of an abode on the Esquiline, which became a frequent resort of English Catholics in Rome. Here she remained until 1637, continually beset by spies, and assailed by the malice of her opponents, but supported by the esteem of Urban. In September 1637 she set out for England, arriving in London on 20 May 1638. There she drew companions round her in a house in the neighbourhood of the Strand. She remained in London until the strict parliamentary régime that followed the departure of Charles I for the north in 1642 rendered it too unsafe. She left the city on 1 May, sought refuge in Yorkshire, where she was well received by her Catholic kinsfolk, and settled at Hutton Rudby in Cleveland. In 1644 she removed to Heworth, near York. Her health, which had been much impaired during her later years, altogether failed during the hardships of the siege of York by the parliamentary

troops, and she died on 20 Jan. 1644-5 at Heworth, soon after the capitulation of the city, and was buried on 22 Jan. in the corner next the porch of Osbaldwick church on the east side, where a gravestone was afterwards placed bearing an inscription which is still legible. It is, however, probable that her body was secretly removed to the Netherlands by her companions at a later date.

After Mary Ward's death various communities following her rule subsisted unrecognised by ecclesiastical authority, until on 13 June 1703 a bull of confirmation of the Institute of Mary, the blessed Virgin, was obtained from Clement XI, which sanctioned all the essential features of Mary Ward's scheme. The headquarters of the order were established at Munich until 1809, when their property was secularised with most of the ecclesiastical possessions in Germany. In Austrian territory, however, they enjoyed the protection of the emperor, and several communities exist at the present day in England, Ireland, and Germany, as well as dependent houses in Asia, Africa, and America. In 1877 Pius IX gave his final approbation to the whole institute.

Mary Ward left fragmentary autobiographies in English and Italian, which are now in possession of the community at Nymphenburg, near Munich. An oil painting of Mary Ward, executed about 1620, is in possession of the nuns of the English Institute of the Blessed Virgin at Augsburg, and a second, representing her in later life, is in possession of the nuns of the institute of Alttötting in Bavaria. Many of her autograph letters, as well as many historical documents relative to the society, are in the Nymphenburg archives.

A life of Mary Ward by her friend and companion, Winifrid Wigmore, was written between 1646 and 1657. Several copies exist in manuscript both in French and English. A manuscript life in Italian by Vincenzo Pageti, secretary of Cardinal Borghese and apostolic notary, written in 1662, and entitled '*Brave Racconto della Vita di donna Maria della Guardia*,' is in the possession of the community at Nymphenburg. The next biography in point of time was compiled in Latin in 1674 by Dominic Bissel, canon regular of the holy cross at Augsburg. There is a copy among the archives of the diocese at Westminster. In 1689 a life was written in German at Munich by Tobias Lohner, a Jesuit father. The autograph copy is in the Nymphenburg archives. All of these are in large measure independent, although that by Winifrid Wigmore is of primary importance. In 1717 an account of

the order by the Benedictine father, Corbinian Khamm, entitled 'Relatio de Origine et Propagatione Institutii, Mariæ nuncupati, Virginum Anglarum,' was printed at Augsburg, and about 1729 a life of Mary Ward by Marco Fridl, a priest. The chief incidents of Mary's life are portrayed in fifty very large oil paintings which have existed in the convent of the institute at Augsburg almost from its foundation in 1663. The series is known among the nuns as 'the painted life,' and was probably constructed from descriptions given to the artist by Mary's surviving companions. The German descriptions appended to the pictures are quoted by Lohner as early as 1689, indicating that they were existing at that early date. These various sources have been collated in the 'Life of Mary Ward' by Mary Catherine Elizabeth Chambers, which appeared in the 'Quarterly Series' in 1882 and 1885 (vols. xxxv. and lii.), under the editorship of Henry James Coleridge.

WATSON, WILLIAM, Lord Watson (1827-1899), judge, son of the Rev. Thomas Watson, minister in the church of Scotland, by Eleonora, daughter of David McInally, was born at the Manse, Covington, Lanarkshire, on 25 Aug. 1827. He was educated at the universities of Glasgow and Edinburgh, the latter of which conferred upon him the degree of LL.D. in 1876. He was admitted advocate in 1851, but nearly a decade elapsed before he entered upon his career, and then he owed his introduction to practice to the illness of a friend who recommended him as a substitute. In July 1865 he appeared for the defence in the *cause célèbre* of Dr. Edward Pritchard [q. v.], the poisoner. Thenceforth his practice grew steadily, though slowly, until in 1874 it was sufficient to warrant Disraeli in rewarding his conservatism, then altogether exceptional at the Scottish bar, with the office of solicitor-general for Scotland (21 July). In the following year he was elected dean of the faculty of advocates, and in 1876 he succeeded Edward Strathairn Gordon [q. v.] in the office of lord advocate and the representation of the universities of Glasgow and Aberdeen. In 1878 he was sworn of the privy council, and placed on the committee of the council for education in Scotland (2 April). As lord advocate he conducted the prosecution of the fraudulent directors

of the City of Glasgow Bank, and several civil actions arising out of the failure. On 28 April 1880 he was appointed to the place among the lords of appeal in ordinary, vacant by the recent death of Lord Gordon, and created a life peer by the title of Baron Watson of Thankerton, Lanarkshire.

A lord advocate of less than four years' standing, who enters the highest judiciary of the empire, might not unreasonably plead his limited experience as a reason for occupying himself mainly, if not exclusively, with the decision of Scottish cases. Almost, however, from the outset Watson grappled boldly and unreservedly with the multifarious, intricate, and frequently recondite legal problems which constitute the staple topics of the judicial deliberations of the House of Lords and privy council, and his great natural acumen and extraordinary assiduity gave to his decisions a soundness and solidity worthy the best traditions of British jurisprudence. The conversance with the civil law which he owed to his Scottish training stood him in good stead in dealing with appeals from colonies in which it still forms the basis of the jurisprudence (see *Law Reports, Appeal Cases*, xii. 569); but where such aid failed him, as in vexed questions of domicile (*ib.* xiii. 436; 1895, p. 522), or French or Indian custom, his judgments were no less able, while the part which he took in determining the policy and practice of the privy council in the exercise of the prerogative jurisdiction in Canadian cases was of capital constitutional importance. His mastery of English law, if less conspicuous, was hardly less consummate; his authority on Scottish law was immense; nor can he be justly taxed with provincialism because he showed himself sedulous to preserve its purity (*ib.* vii. 393). In later life he was reputed the profoundest lawyer in the three kingdoms, and his influence was commensurate.

Watson has thus been generally credited with a principal share in the responsibility for the decision in Lord Sheffield's case, which was perhaps justified by the peculiar facts upon which it turned, but would unquestionably, if followed, have seriously hampered the business of the banking community. This consequence was in fact only obviated by a later decision (*ib.* 1892, p. 201; cf. *IRMSCHMIDT, FARRER, LORD IRMSCHMIDT*); but the aberration, if such it must be deemed, was unique in a career of nearly twenty years of splendid service, which has left an ineffaceable impress upon every part of our legal system.

Watson was homely in appearance and unassuming in manner, though a merciless

dissector of bad argument. He never lost his broad Scottish accent or acquired the niceties of English style, but his judgments are distinguished by a methodical arrangement and massive strength of diction which amply atone for their occasional infelicity of phrase. The care which he lavished on them was prompted neither by zeal nor by ambition, but by sheer sense of duty; for law, if not positively irksome, was at any rate not particularly congenial to him, while of ambition he had not a jot. He was a keen sportsman, but otherwise somewhat indolent, and would probably have been happier in a quiet country life than while dispensing justice in the most august tribunals of the British empire.

Watson died at Sunlaw's House, Kelso, on 14 Sept. 1899, leaving issue by his wife Margaret (*m.* 6 Aug. 1868, *d.* 3 March 1898), daughter of Dugald John Bannatyne. An 'Address on the Repression of Crime,' delivered by Watson in 1877 before the National Association for the Promotion of Social Science, is printed in the 'Transactions' of the association.

J. M. R.

WAUCHOPE, ANDREW GILBERT (1846-1899), major-general, born at Niddrie Marischal, Midlothian, on 5 July 1846, was the second son of Andrew Wauchope (1818-1874) of Niddrie by his wife, Frances Maria (*d.* 26 June 1868), daughter of Henry Lloyd of Lloydsburg, co. Tipperary. Sir John Wauchope [q. v.], the covenanter, was his ancestor. At the age of eleven he was sent to a school at Worksoy in Nottinghamshire, and a little later to Foster's school, Stubbington House, Gosport, to prepare him for the navy. In 1859 he entered the Britannia as a naval cadet, and on 5 Oct. 1860 was entered as midshipman on board the St. George, where he formed a friendship with Prince Alfred. Finding the army more to his taste, he obtained his discharge on 8 July 1862. He obtained a commission in the 42nd regiment (the Black Watch) on 21 Nov. 1865, and was made a lieutenant on 23 June 1867. He served in the Ashanti war from 30 Nov. 1878, obtaining special employment as commander

of Russell's regiment of Haussas during its advance from the river Prah to Kumasi. While in this post he took part in a number of engagements, and was twice wounded, the second time severely. He was mentioned in the despatches, and received a medal with a clasp.

In July 1878, on the annexation of Cyprus, he was placed in charge of the district of Papho on that island, and on his return to England in August 1880 he was nominated C.M.G. in recognition of his services. On 14 Sept. 1878 he obtained his captaincy, and in 1882 he served in the Egyptian campaign. He was one of the first to enter the trenches at Tel-el-Kebir and received a medal with a clasp and the khedive's star. On 14 March 1884 he attained the rank of major, and in the Sudan expedition of that year he served under Sir Gerald Graham as deputy-assistant adjutant and quartermaster-general. At the battle of El Teb he was again severely wounded. He was mentioned in the despatches, and was rewarded on 21 May with a brevet lieutenant-colonelcy. In the following season, 1884-5, he took part in the Nile expedition, serving in the river column under Major-general William Earle [q. v.] At Kirkeban on 11 Feb. 1885 he was again severely wounded.

After the return of the expedition he went back to Scotland to recruit, and for a time devoted himself to the management of his estates, to which he had succeeded on the death of his elder brother, Major William John Wauchope, on 28 Nov. 1882. His popularity in the county of Midlothian became so great that the conservative leaders induced him to contest Midlothian in opposition to W. E. Gladstone at the general election of 1892. He was successful in reducing Gladstone's majority from 4,631 to 690.

On 21 May 1888 he became colonel, and C.B. in 1880, and in the autumn of 1892 he resumed active military duties, being nominated colonel of the 73rd Perthshire regiment. In July 1898 he was selected to command a brigade in the expedition under Major-general (now Lord) Kitchener, for the re-conquest of the Sudan. He took part in the engagements at Atbara and Omdurman, and on 16 Nov. 1898 was appointed major-general in recognition of his services. On 14 April 1899 he received the honorary degree of LL.D. from Edinburgh University, and in June unsuccessfully contested South Edinburgh against Mr. Arthur Dewar at a by-election. In October he received a commission to command the third or highland brigade destined for service in the Trans-

vaal, where war had just been declared. It formed part of the column under General Lord Methuen for the relief of the besieged towns of Kimberley and Mafeking. After taking part in the engagements of Belmont and Modder River he fell at Magersfontein on 11 Dec. while leading his brigade in a night attack on the Boer entrenchments. He was buried on 13 Dec. at the township of Modder River. On 18 Dec. he was reinterred at Matjesfontein. Wauchope was twice married: first, on 9 Dec. 1882, to Elythea Iltuth (*d.* 3 Feb. 1884), daughter of Sir Thomas Erskine, baronet, of Carnbo; and secondly, in 1893, to Joan, daughter of Sir William Muir. He left a son by his first marriage.

WESTMINSTER, DUKE OF. [See GROSVENOR, HUGH LUFUS, 1826-1899.]

WESTMORLAND, EARL OF. [See FANU, FRANCIS WILLIAM HENRY, 1825-1891.]

WESTWOOD, THOMAS (1814-1888), minor poet and bibliographer of angling, was the son of the Thomas Westwood of Enfield so vividly portrayed by Charles Lamb in several letters bearing date 1829-1830. 'Father ('Daddy' or more familiarly 'Gaffer') Westwood,' as Lamb calls him, was formerly a rider or traveller for a wholesale drapery house, then a thriving haberdasher within the sound of Bow Bells, who retired with something under a competence before the beginning of the French war at the close of the eighteenth century, and settled at Enfield, of which place he became a patriarch. Living upon the minimum consistent with gentility, he was nevertheless 'a star among the minor gentry, receiving the bows of the tradespeople and the courtesies of the almswomen daily . . . he hath borne parish offices, since fine old sea souge at three score and ten,' is proud of having married his daughter, 'and sighe only now and then when he thinks that he has a son on his hands about fifteen' (letter to Wordsworth, 22 Jan. 1830).

This son was the future poet, Thomas Westwood, who was born at Enfield on 26 Nov. 1814, and early became an ardent disciple and student of Izaak Walton, Lamb's copy of whose 'Compleat Angler' he was privileged to use. Lamb let him loose in his library, the shelves of which he used frequently to relieve by flinging modern books (presentation copies) into the Westwoods' garden. Many years later Westwood

contributed to 'Notes and Queries' (see below) some interesting reminiscences of Charles Lamb, whom he characterised as 'a seventeenth-century man mislaid.' Introduced by degrees to many of Lamb's literary friends, the young man was imbued with a taste for letters. In 1840 he issued a dainty volume of 'Poems' (London, 8vo), and was credited by a critic in the 'Athenaeum' with 'a poetical eye, a poetical heart, and a musical ear.' It was followed in 1850 by 'Burden of the Bell and other Lyrics,' many of which had previously appeared in the 'Gentleman's Magazine.' His remaining volumes of verse were: 'Berries and Blossoms' (1855), 'Foxglove Bells: a Book of Sonnets' (1856), 'The Sword of Kingship' (privately printed, 1860), 'The Quest of the Sangreall' (1868), 'Twelve Sonnets and an Epilogue (In Memoriam I. Walton),' London, 1884, and 'Gathered in the Gloaming' (1886), poems of early and later years, representing the verses he thought best worthy of survival. In a humorous sonnet on the 'Small Poets,' Westwood sang as a unit in a countless swarm, 'Oh for a wizard's sleight to turn this swarm of mites into one mighty!' Yet all his lyrics are marked by an exquisite taste, and one of them, 'Love in the Alps,' is said to have excited the envious admiration of Landor.

In 1814 Westwood went to Belgium and there obtained the post of director and secretary of the Tournay railway. He spent most of his later life in West Flanders, devoting leisure and money to the collection of a splendid library of works on angling, upon which subject he was recognised in England as an authority, probably without a rival. In 1861 he published through the 'Field' office 'A New Bibliotheca Piscatoria; or General Catalogue of Angling and Fishing Literature, with Bibliographical Notes and Data' (preface dated Brussels, July 1861). In 1864 he issued his 'Chronicle of the Compleat Angler,' now a scarce volume, and deservedly prized, for it is perhaps the most elaborate bibliography on record of any book printed in England, with the exception of the Bible; it was printed as a supplement to Marston's sumptuous edition of 'The Compleat Angler' of 1888 (ii. 268-330, with a new preface). In 1883, with the collaboration of Thomas Satchell (*d.* 1888), Westwood produced in a handsome quarto his *magnum opus*, the 'Bibliotheca Piscatoria: a Catalogue of Books on Angling, the Fisheries and Fish-Culture,' the small volume of 1861 being practically transformed into a new work, containing considerably over five thousand separate entries. In the

same year Westwood reprinted, with a good introduction, 'The Secrets of Angling' (1613) of John Denny. Westwood died in Belgium on 13 March 1888.

WIGHTMAN, JOSEPH (d. 1722), major-general, was appointed ensign to Lieutenant-colonel Robert Smith on 28 Dec. 1690, and lieutenant to Lieutenant-colonel Thomas Hopson on 7 Aug. 1693, with the additional rank of captain. On 8 Dec. 1696 he was promoted captain and lieutenant-colonel in the first foot guards. He subsequently became an officer of Sir Matthew Bridges's regiment of foot (now the Leicestershire regiment), with which he served in the Netherlands under William III. In 1701 he accompanied the regiment to Holland and served in Marlborough's campaigns in 1702 and 1703. He was promoted to the regimental rank of lieutenant-colonel in 1703, and on 26 Aug. 1703 received the brevet rank of colonel. Marlborough commended him as 'a very careful, diligent officer' (*Letters and Despatches of Marlborough*, ed. Murray, 1845, i. 192). In 1704 the regiment was transferred to the Spanish peninsula, where it saw much service under the Earl of Galway, and suffered severely at Almanza on 25 April 1707. On 1 Jan. 1707 Wightman became brigadier-general, and on 20 Aug. he was appointed to the command of the regiment on the death of Colonel Holcroft Blood [q.v.] On 1 Jan. 1710 he was promoted to the rank of major-general.

On 13 July 1712 Wightman was appointed commander-in-chief in Scotland during the absence of John Campbell, second duke of Argyll [q.v.] This command he obtained through General John Richmond Webb [q.v.], somewhat against the inclination of Argyll, who desired to nominate Brigadier-general William Breton (*Addit. MS.* 33273, f. 198). Wightman's position was difficult. He did not get on well with Argyll, who, he complained, never answered his letters, and he found the Scottish people generally jacobite in feeling, and hostile to the English soldiery. To avoid offending the presbyterians he ordered his chaplain to discontinue the use of the book of common prayer in the regimental services (*Addit. MS.* 6116, f. 81). On the outbreak of the rebellion of 1715 under the Earl of Mar [see **ERSKINE, JOHN**, SIXTH or ELEVENTH EARL] Argyll was absent from Scotland, and Wightman, drawing together his forces numbering about eighteen

hundred men, took post under Stirling, where Argyll, hastening from London, joined him about the middle of September. At the battle of Sheriffmuir on 13 Nov. Wightman commanded the centre of the royal forces, composed of about three regiments of infantry, and ably supported Argyll, who, with the cavalry on the right wing, completely routed the enemy's left. He wrote an account of the battle on the following day, which was printed in 1717 in 'A History of the late Rebellion' by Robert Patten [q.v.] It was reprinted and severely criticised in 1745 by Robert Campbell in his 'Life of John, duke of Argyll and Greenwich.'

In 1718, at the time of the landing of the jacobites at Loch Alsh under William Murray, marquis of Tullibardine [q.v.], Wightman was stationed at Inverness, and on 10 June he commanded the royal troops at the battle of Glenshill, where he forced the highlanders to disperse, and the Spanish troops to surrender prisoners of war. His services were rewarded with the government of Kinsale. He died suddenly of apoplexy at Bath on 25 Sept. 1722.

WILDE, JAMES PLAISTED, LORD PENZANCE (1816-1899), judge, second son of Edward Archer Wilde, solicitor, of London, by Marianne, daughter of William Norris, M.D., was born on 12 July 1816 [cf. **WILDN**, THOMAS, LORD TRAUB]. He was educated at Winchester School and the university of Cambridge, where he graduated (from Trinity College) B.A. in 1838, and proceeded M.A. in 1842. On 16 April 1838 he was admitted student at the Inner Temple, and was there called to the bar on 22 Nov. 1839, and elected bencher on 15 Jan. 1866. A pupil of Barnes (afterwards Sir Barnes Peacock), and 'devil' to his uncle, Sir Thomas Wilde, he was rapidly launched into practice. In 1840 he was made counsel to the commissioners of customs, and thereafter both on the northern circuit and at Westminster his career was one of rapid

and sustained success. He took silk on 6 July 1855, was made counsel to the Duchy of Lancaster in 1859, and in 1860 baron of the exchequer, being at the same time invested with the coif and knighted (13, 24 April). Thence, on the death of Sir Cresswell Cresswell in 1863, he was transferred to the court of probate and divorce (28 Aug.), and on 26 April 1864 was sworn of the privy council. In his new office he at once gave proof of the highest judicial qualities, and by a series of luminous decisions did much to shape both the substantive law and the procedure of the court. He took part with Lord-chief-justice Cockburn and Chief-baron Pollock in the proceedings under the Legitimacy Declaration Act (21 & 22 Vict., c. 93), which disposed of the preposterous pretensions of the *soi-disant* Princess Olive [see **SMITH, MRS. OLIVIA**]. He was raised to the peerage on 6 April 1869 by the title of Baron Penzance of Penzance, Cornwall, and on 23 April took his seat in the House of Lords. The new peer counted as a distinct gain to the government. In a weighty and eloquent maiden speech he justified (15 June 1869) the disestablishment of the Irish church on the broad ground of equity. He carried the measure of the same session enabling the evidence of the parties to be taken in actions for breach of promise of marriage and proceedings consequent upon adultery. In the following session he supported the measures in amendment of the laws relating to absconding debtors, married women's property, and the naturalisation of aliens, and moved on 27 March 1871 the second reading of the bill for the legalisation of marriage with a deceased wife's sister. He also took an active part in the discussions on the judicature bills of 1872 and 1874. In November 1872 he retired from judicial office in consequence of ill health, and at considerable pecuniary sacrifice—his pension was fixed at 3,500*l.*—but in 1874 he was sufficiently recovered to undertake the not very onerous duties of judge under the Public Worship Regulation Act (37 & 38 Vict., c. 85). The frankly Erastian character of the act placed Penzance from the first under a grievous disadvantage. He was invested with the statutory jurisdiction by sign manual on 14 Nov. 1874, without other preliminary than a formal nomination by the archbishops of Canterbury and York. By virtue of the statute he succeeded to the offices of dean of the arches court of Canterbury, master of the faculties, and official principal of the chancery court of York on the retirement in the following year (October) of Sir Robert Phillimore and Granville Har-

court Vernon, a mere declaration of churchmanship being substituted for the oath and subscription to the Thirty-nine Articles required by the 127th canon of 1603-4. His jurisdiction thus lacked moral authority, his monitions were disregarded, and his inhibitions treated with contempt. His position in the judicial hierarchy was also by no means well defined. The statute did not expressly constitute his court a superior court of law, or invest him with power to commit for contempt, and the court of queen's bench asserted the right to review his decisions and restrain their enforcement by prohibition [cf. **COCKBURN, SIR ALEXANDER**]. These questions were determined in Penzance's favour by the House of Lords in 1881 and 1882 (*Law Reports, Appeal Cases*, vi. 424, 657, vii. 240), but by that time his occupation was virtually gone. The bishops discouraged recourse to his court, while among the laity not a few of those least disposed to sympathise with lawlessness deplored the scandal and doubted the policy of converting ritualists into martyrs. For these reasons Penzance's court came eventually to be all but deserted for that of the Archbishop of Canterbury. Penzance retired from the bench in March 1899, and died at his seat, Eashing Park, Godalming, Surrey, on 9 Dec. following. His remains were interred on 16 Dec. at Shackleford, near Godalming. By his wife, Lady Mary Playdell Bouverie, youngest daughter of William, third earl of Radnor, whom he married on 20 Feb. 1860, he left no issue: she died on 21 Oct. 1900. Penzance served on the Royal Commissions on the Marriage Laws, 1865; the Courts of Law, 1867 and 1869; claims to compensation consequent on the abolition of purchase in the army, 1873; the retirement and promotion of military officers, 1874; the customs of the Stock Exchange, 1877; and the condition of Wellington College, 1878. He took only very occasional part in the judicial deliberations of the House of Lords. His favourite pastime was floriculture, and his favourite flower the rose, which he hybridised with remarkable success.

An 'Address on Jurisprudence and Amendment of the Law,' delivered by Penzance in 1864 at the York meeting of the National Association for the Promotion of Social Science, is printed in the 'Transactions' of the association.

WILDE, OSCAR O'FLAHERTIE WILLS (1856-1900), wit and dramatist, born in Dublin on 15 Oct. 1856, was the younger son of Sir William Robert Wills Wilde [q. v.], who married, in 1851, Jane Francisca Elgee (d. 1896), a granddaughter of Archdeacon Elgee of Wexford [see under **WILDE, SIR W. IL. W.**] Oscar Wilde's elder brother, William Charles Kingsbury Wilde (1853-1899), a journalist, who wrote much for the 'World' and the 'Daily Telegraph,' died in London in March 1899. His mother, who wrote under the signature 'Speranza,' had a literary salon at Dublin, where much clever talk was listened to by the children.

After education at Portora royal school, Enniskillen, Oscar Wilde studied during 1873-4 at Trinity College, Dublin, where he won the Berkeley gold medal with an essay on the Greek comic poets. He matriculated from Magdalen College, Oxford, 17 Oct. 1874, holding a demyskip at Magdalen from 1874 to 1879, and graduating B.A. in 1878. In 1877, during a vacation ramble, he visited Ravenna and Greece, in company with Professor Mahaffy, and in June 1878 he won the Newdigate prize with a poem on 'Ravenna.' He was greatly impressed by Florence and by the lectures of Ruskin, spending several whole days in breaking stones upon the road which the professor projected near Oxford. He had from his youth a strong antipathy to games, though he was fond of riding. His precocity, both physical and mental, was exceptional, and while still at Magdalen he excogitated his æsthetic philosophy of 'Art for Art's sake,' of which he was recognised at once as the apostle, and enunciated the aspiration that he might be able to live up to his blue china. His rooms, overlooking the Cherwell, were notorious for their exotic splendour, and Wilde's bric-à-brac was the object of several philistine outrages.

The abuse of foes and the absurdities of friends alike furnished material for persiflage. His wit was undoubted, and he successfully cultivated the reputation (not wholly deserved) of being a complete idler. He had a natural aptitude for classical studies, and he obtained with ease a first-class both in classical moderations (1876) and in *literæ humaniores* (1878). He had already written poems, marked by strange affectations, but with a classical finish and an occasional felicity of detail. These had appeared in the 'Month,' the 'Catholic Mirror,' the 'Irish Monthly,' 'Kottabos,' and in the first number of Edmund Yates's periodical called 'Time.' A selection of these juvenile pieces was printed in 1881 as 'Poems by Oscar Wilde' (reprinted in New York, 1882). On leaving Oxford Wilde was already a well-known figure and a favourite subject for caricature (notably in 'Punch,' and later as Archibald Grosvenor in Gilbert and Sullivan's comic opera, 'Patience'). He was recognised as the founder of the æsthetic cult, the symbols of which were peacocks' feathers, sunflowers, daddie, and blue china, long hair, and velvet-ean breeches. His sayings were passed from mouth to mouth as those of one of the professed wits of the age. His fame crossed the Atlantic, and in 1882 he made a tour through the United States, lecturing two hundred times in such cities as New York, Boston, and Chicago, upon 'Æsthetic Philosophy,' and meeting with great, though not unvaried, success. The paradoxical nature of his utterances at times excited disgust. A cablegram to England expressed his 'disappointment' with the Atlantic, and he finally came to the conclusion that the English 'have really everything in common with the Americans—except, of course, language.' A drama by him, called 'Vera,' was produced in New York during his stay there in 1882.

For five or six years after his return from America Wilde resided chiefly in London in comparative privacy, but paid frequent visits to Paris and travelled on the continent. In 1884 he married Constance, daughter of Horace Lloyd, Q.C., and in 1888 he commenced a period of literary activity, which was progressive until the collapse of his career in 1900. This period opened with 'The Happy Prince and other Tales' (1888, illustrated by Walter Crane and Jacob Hood), a volume of charming fairy tales with a piquant touch of contemporary satire. In 1891 appeared 'Lord Arthur Savile's Crime, and other Stories' and 'The Picture of Dorian Gray.' The novel last mentioned,

which was first published in 'Lippincott's Magazine,' was full of subtle impressionism and highly wrought epigram, but owed notoriety to an undercurrent of very disagreeable suggestion. A 'Preface to Dorian Gray,' concluding 'All Art is quite useless,' appeared separately in the 'Fortnightly Review' (March 1891). In the previous number of the 'Review' readers had been more than ever bewildered by Wilde's exceptionally brilliant plea for socialism, on the ground that it would relieve us of 'the eordid necessity of living for others.' Later in the same year Wilde reprinted some 'literary wild oats' under the title 'Intentions' (three contributions to reviews). One of these, on 'Masks,' revealed an intimate knowledge of Shakespeare. 'A House of Pomegranates' (morsfairy tales), 1892, was taken in the main at the author's valuation as 'intended neither for the British child nor the British public.'

Meanwhile in 1891 a blank-verse tragedy by Wilde, called 'The Duchess of Padua,' was produced in New York (it was published in the collective edition of Wilde's works, 1908). Subsequently he found a more profitable mode of expression for his literary abilities in light comedies, which, despite his narrow experience of modern stage conditions, were remarkable equally for theatrical and for literary skill. His first light comedy, 'Lady Windermere's Fan,' was produced at the St. James's Theatre on 20 Feb. 1892, and was printed next year. It was full of saucy repartee and overdone with epigram of the pattern peculiar to the author, namely, the inverted proverb, but it made a hit. It was followed at the Haymarket Theatre in April 1893 by 'A Woman of no Importance,' a drama of a similar kind, to whose success the acting of Mr. Tree and Mrs. Bernard Beere greatly contributed (printed 1894, 4to).

In the summer of 1893 the licenser of plays refused to sanction the performance of 'Salomé,' a play of more serious character, written in French. This was a marvel of mimetic power, which owed most perhaps to Flaubert's 'Herodias'; it was printed as 'Salomé, Drame en un acte' (1893, 4to), was rendered into English by Wilde's friend, Lord Alfred Douglas, in 1894 (London, 4to; with ten pictures by Aubrey Beardsley), and afterwards formed the libretto of an opera by Richard Strauss. The original version was produced in Paris in 1896. In 1894 was also published 'The Sphinx' (dedicated to Marcel Schwob), a poetical catalogue of 'amours frequent and free,' presented in the metre of 'In Memoriam.' In the same year, in a paper entitled 'Phrases and Philosophies for the use of the Young,' Wilde gave the tone to a

shortlived magazine called 'The Chameleon,' issued at Oxford in a limited edition. The tortured paradoxes of the new cult were effectively parodied in Mr. Hichens's 'Green Carnation.' To the 'Fortnightly' of July 1894 Wilde contributed some curious 'Poems in Prose.' He could write English of silken delicacy, but in his choice of epithets there are frequent traces of that 'industry' which he denounced as the 'root of all ugliness.'

A third comedy, 'The Ideal Husband,' was successfully produced at the Haymarket on 3 Jan. 1895, although it was not printed until 1899. On 14 Feb. 1895 was given at the St. James's Theatre a fourth play in the light vein, 'The Importance of being Earnest: a trivial comedy for serious people' (1895, 4to), an irresistible dramatic trifle, at once insolent in its levity and exquisite in its finish. The Victorian era, it may fairly be said, knew no light comedies which for brilliant wit, literary finish, or theatrical dexterity were comparable with Wilde's.

The manuscript of a poetical drama by Wilde, entitled 'A Florentine Tragedy,' was first printed in the collective edition of 1908. There was privately printed in 1889 and first published in the collective edition an essay on Shakespeare's sonnets, entitled 'The Portrait of Mr. W. 11.,' of which an outline appeared in 'Blackwood's Magazine' in July 1889.

In the month following the successful production of 'The Importance of being Earnest' Wilde brought, with fatal insolence, an unsuccessful action for criminal libel against the Marquis of Queensberry. In the result he was himself arrested and charged with offences under the Criminal Law Amendment Act, and being found guilty after a protracted trial at the Old Bailey on 25 May 1895, he was sentenced by Mr. Justice Wills to two years' imprisonment with hard labour. Ruined in fortune as well as in fame, he soon afterwards passed through the bankruptcy court. While in prison he wrote a kind of apology for his life (published posthumously in 1906 as 'De Profundis'), and he also studied Dante assiduously, contemplating an essay on 'The Divine Comedy' which should develop a new theory. On 19 May 1897 he was released from prison. Thenceforth his necessities were provided for by a small annuity purchased by his friends. After spending some time at Berneval, he in 1898 made his headquarters at the Hôtel d'Alsace, Paris. While at Berneval he wrote and issued anonymously in London a powerful but rhetorical 'Ballad of Reading Gaol' (1898). Thenceforth he wrote nothing. He adopted the name Sebastian Melmoth—Melmoth

from the romance of Maturin, a connection of his mother, Lady Wilde, Sebastian suggested by the arrows on the prison dress. He had contributed some information to the 1892 edition of 'Melmoth the Wanderer.'

After visiting Sicily and Rome in the spring of 1900, Wilde died of cerebral meningitis at the Hôtel d'Alsace on 30 Nov. 1900. He received the last rites of the Roman Catholic church. He was buried in the Bagneux cemetery on 3 Dec., but his remains were removed to the cemetery of Père-Lachaise, Paris, on 20 July 1909. His wife had died in 1896. Two sons—Cyril, born in 1885, and Vyvyan, born in 1886—survived both parents.

After Wilde's death there was first published his prose apologia written in prison entitled 'De Profundis' (1905). A uniform edition of Wilde's works in 13 vols. appeared in 1908, edited by Mr. Robert Ross. Almost all his writings were here collected save 'The Picture of Dorian Gray,' reissued independently at the same time. A cheaper collective edition, with a few additions, followed in 1909. Many of his publications were also, after his death, issued separately, either for private or general circulation, and several have been translated into German.

T. S.

WILLIS, Sir GEORGE HARRY SMITH (1823-1900), general, colonel of the Middlesex regiment, of Stretham Manor, Cambridgeshire, only son of Lieutenant George Brander Willis, royal artillery, of Sopley Park, Hampshire, who had served in the Walcheren and Peninsular campaigns, was born at Sopley Park on 11 Nov. 1823. Educated privately he obtained a commission on 23 April 1841 as ensign in the 77th foot, then stationed at Malta. His further commissions were dated: lieutenant 30 Aug. 1844, captain 27 Dec. 1850, brevet major 12 Dec. 1854, brevet lieutenant-colonel 6 June 1856, major unattached 19 Dec. 1859, brevet colonel 26 June 1862, major-general 29 May 1875, antedated to 28 June 1868, lieutenant-general 8 May 1880, general 11 May 1887.

Willis served with his regiment in the

Mediterranean, the West Indies, and North America, and accompanied it to the Crimea in 1854, was present at the affairs of Bulganac and McKenzie's farm, at the battles of Alma (20 Sept.) and of Inkerman (6 Nov.), where his regiment distinguished itself Willis leading the grenadier company in the charge. He did one hundred tours of duty in the trenches before Sebastopol, and took part in the repulse of several sorties. On 13 April 1855 he was appointed deputy-assistant quartermaster-general on Lord Raglan's staff, and was present at the capture of the quarries, the unsuccessful attack of the Redan on 18 June, the battle of the Tchernaya in August, and the fall of Sebastopol on 8 Sept. On 11 May 1856 he was appointed assistant quartermaster-general to the 4th division until the return of the troops to England.

For his services in the Crimea he was mentioned in despatches (*London Gazette*, 24 April 1855), received the war medal with three clasps, the Sardinian and Turkish medals, the 5th class of the legion of honour and of the Medjidie, and brevets of major and lieutenant-colonel.

Willis went to Algeria with the French after the Crimean war, and returned home in 1857, when he formed the second battalion of the 6th foot (Warwickshire), with which he served as major until his appointment to be assistant quartermaster-general at Gibraltar on 25 May 1858. He was transferred to Malta as assistant adjutant-general on 20 Feb. 1859, and remained there five years. From 22 Feb. 1868 he served for five years as assistant quartermaster-general on the staff of the southern district, was made a companion of the order of the Bath, military division, on 20 May 1871, and served on the headquarters staff at the war office as assistant quartermaster-general from 25 Aug. 1873 until his promotion to be major-general.

Willis commanded the northern military district for three years from 1 April 1878, and in 1882 was selected to command the first division in the Egyptian expedition under Sir Garnet (afterwards Viscount) Wolseley. He was in command of the troops at the actions of El Magfar and Tel-el-Mahuta, at the capture of Mahsarah, at the second battle of Kassassin on 9 Sept., and was wounded in the assault of the lines of Tel-el-Kebir (18 Sept.) For his services he was mentioned in despatches (*ib.* 8 and 28 Sept., 6 Oct., and 2 Nov. 1882), received the thanks of both houses of parliament, the medal with clasp and the bronze star, the second class of the Turkish order of the Osmanieh, and was made a K.O.B.

Willis commanded the southern military district with headquarters at Portsmouth for five years from 1 May 1884, and retired from the service on 11 Nov. 1890. In July of this year he was appointed colonel of the Devonshire regiment, and in October honorary colonel of the 2nd Hants volunteer artillery. He unsuccessfully contested Portsmouth as a parliamentary candidate in the conservative interest in 1892. Decorated with a G.C.B. on 25 May 1895, in 1897 he was transferred to the colonelcy of his old regiment, the Middlesex. He was a grand officer of the legion of honour, and a knight of justice of the order of St. John of Jerusalem, and was in receipt of a distinguished service pension. He died after a long illness at his residence, Seabank, Bournemouth, on 29 Nov. 1900.

Willis married, first, in 1866, Eliza (d. 1897), daughter of George Gould Morgan, M.P., of Brickendonbury, Hertfordshire; and, secondly, in 1874, Ada Mary, daughter of Sir John Neeld, first baronet, who survived him.

[War Office Records; Army Lists; Despatches; Who's Who, 1900; Times, 30 Nov. 1900; Kinglake's Invasion of the Crimea; Maurice's Military History of the Campaign of 1882 in Egypt; Royle's Egyptian Campaigns, 1882-5.] R. H. V.

WIMPERIS, EDMUND MORISON (1835-1900), water-colour painter, eldest son of Edmund Richard Wimperis, cashier of Messrs. Walker, Parkor, & Co.'s loan works at Chester, and Mary Morison, was born at Flocker's Brook, Chester, on 6 Feb. 1835. He came early in life to London, and was trained as a wood-engraver and draughtsman on wood under Myles Birket Foster [q. v. Suppl.] He did much for the 'Illustrated London News' and other periodicals and books. He was an indifferent figure draughtsman, and confined himself to landscape when he adopted painting as his profession. He was a member of the Society of British Artists from 1870 to 1874. He began in 1866 to contribute to the Instituto of Painters in Water-colours the pretty landscapes in the manner of Birket Foster or of David Cox in his tamer moods, by which he is chiefly known. They are neat and finished, but somewhat characterless and old-fashioned in technique. In later life he also painted in oils. Wimperis was elected an associate of the institute in 1873, a full member on 8 May 1876, and vice-president on 1 April 1895. He took an active part in the affairs of the institute, and in those of the Artists' Benevolent Fund.

He was married on 11 April 1863 to Anne

Harry, daughter of Thomas Edmonds of Penzance, and left a family of two sons and two daughters at his death, which took place at Southbourne, Christchurch, Hampshire, on 25 Dec. 1900.

[Times, 28 Dec. 1900; Athenæum, 5 Jan. 1901; private information.] C. D.

WODEHOUSE, SIR PHILIP EDMOND (1811-1887), colonial governor, born on 20 Feb. 1811, was the eldest child of Edmond Wodehouse (1784-1855) of Sennow Lodge, Norfolk, by his wife and first cousin, Lucy (d. 21 June 1829), daughter of Philip Wodehouse (1745-1811), prebendary of Norwich. The Earl of Kimberley is his second cousin. Wodehouse obtained a writership in the Ceylon civil service in May 1828, and became assistant colonial secretary and clerk of the executive and legislative councils in October 1833. In 1840 he was appointed assistant judge at Kandi, and in 1843 government agent for the western province. In 1851 he was nominated superintendent of British Honduras, where he directed his attention to financial and fiscal reform, and on 23 March 1854 he arrived at Georgetown as governor of British Guiana. His administration was signalised by two serious negro riots, the second occasioned by the imposition of a head tax. On 25 July 1857 the governor and his suite were pelted by a large mob of negroes, and several persons injured. In 1858 he was employed on a special mission to Venezuela. On 28 Oct. 1861 he succeeded Sir George Grey [q. v. Suppl.] as governor of the Cape of Good Hope and high commissioner in South Africa, offices which he held until 1870. He arrived at Cape Town on 15 Jan. 1862, and was almost immediately occupied in arbitrating between the Orange Free State and the Basuto chief, Moshesh. Wodehouse did not regard the government of the Orange Free State with much favour. In October 1864, however, on the request of the president, Sir Johannes Heinrich Brand [q. v. Suppl.], he determined the boundary line between the Basutos and Free State in favour of the latter. Moshesh acquiesced in the decision, but in the following year took advantage of another pretext to declare war on the Free State. Wodehouse, on 27 June 1865, issued a proclamation of neutrality, and on 12 March 1868, after the natives had been worsted, he declared the Basutos British subjects, at the request of Moshesh, and ordered the cessation of hostilities. After long negotiations he succeeded on 12 Feb. 1869 in coming to an agreement with the Free State, by which they received some cessions of territory

while the rest of the Lesuto became a native reserve under British protection. He was involved during the whole of his administration in a conflict with colonial opinion on the question of responsible government. Cape Colony had received representative institutions, but the limits of the governor's authority were as yet unsettled, and the principle that the administration should direct the internal policy of the colony was not yet established. Unlike his predecessor, Sir George Grey, Wodehouse disapproved of responsible government, desiring a more autocratic system, and even proposing that the Cape should return to the position of a crown colony. He successively proposed four constitutions, each more despotic than the last; but finding no adequate support at home, and encountering bitter opposition in the Cape, he failed to find a solution of the problem, which was left to his successor, Sir Henry Barkley [q. v. Suppl.]

On 2 March 1872 Wodehouse was appointed governor of Bombay, retaining offices until 1877, when he was succeeded by Sir Richard Temple. He cultivated the friendship of native states, and successfully dealt with riots in Bombay, consequent on the famine of 1874. On relinquishing his command on 30 April 1877, he retired from active service. He was nominated C.B. in 1860, K.C.B. in 1862, and G.C.S.I. in 1876. He died in London on 25 Oct. 1887 at Queen Anne's Mansions, Westminster. On 19 Dec. 1833 he married Katherine Mary (d. 6 Oct. 1866), eldest daughter of F. J. Templer. By her he had an only child, the Right Hon. Edmond Robert Wodehouse, M.P. for Bath from 1880 to 1906. The division of Wodehouse in Cape Colony, created in 1872, was called after the governor.

Molteni's Life and Times of Sir J. C. Molteni, 1900, passim; Temple's Men and Events of my Time in India, 1882, pp. 461-2, 476, 480; Temple's Story of my Life, 1892, ii. 2-3.] E. I. C.

WOODGATE, SIR EDWARD ROBERT PREVOST (1845-1900), major-general, born on 1 Nov. 1845, was the second son of Henry Arthur Woodgate (d. 24 April 1874), rector of Belbroughton in Worcestershire. He was educated at Radley and Sandhurst, and joined the 4th foot (now the Royal Lancashire regiment) on 7 April 1865. With it he served in the Abyssinian campaign of 1868; was present at the action of Arogee and the capture of Magdala, and received a medal. He ob-

tained his lieutenantancy on 7 July 1869. He was next employed on special service in the Ashanti war of 1873-4, and took part in the actions of Essaman, Ainsah, Abrakampa, and Faysunah, the battle of Amoasful, and the capture of Kumassi. He was twice mentioned in the despatches and received a medal with a clasp. After passing through the staff college in 1877, he attained the rank of captain on 2 March 1878, and was selected for special employment in the South African war of 1879. He was twice mentioned in the despatches for his work as staff officer of the flying column in the Zulu campaign; was present at Kambula and Ulundi, and was rewarded with a brevet majority on 29 Nov. 1879, and a medal with a clasp.

From 1880 to 1885 Woodgate served as brigade major in the West Indies. In the autumn of 1885 he proceeded to India as a regimental officer, returning in December 1889. In 1893 he obtained the command of the first battalion of the Royal Lancashire regiment, and on 26 June attained the rank of lieutenant-colonel. On 24 May 1896 he was nominated C.B., and on 26 June 1897 he received his colonelcy, obtaining the charge of the fourth regimental district at Lancaster. In April 1898 he was sent to Sierra Leone to organise the new West African regiment. The new corps was almost immediately called to take the field against Bai Burch and other malcontents who had risen on account of the hut tax. Woodgate successfully conducted the operations against the rebels, but in 1899 he was invalided home, where he was placed in command of the seventeenth regimental district at Leicester.

Four months later, on 13 Nov. 1899, on the formation of the fifth division under Sir Charles Warren for service in South Africa, Woodgate was given command over the eleventh or Lancashire brigade with the local rank of major-general. Arriving at Durban in Natal in December 1899 he crossed the Tugela with Warren at Wagon Drift on 10-17 Jan. 1900. On the night of 23 Jan. he occupied the perilous eminence of Spion Kop. On the following day he was dangerously wounded just before the order for retreat from Spion Kop was given. On 23 March he died at Mooi River from the effects of his wounds. A few weeks before his death he was nominated K.C.M.G. in recognition of his services in Sierra Leone.

[Times, 26 March 1900; Who's Who; Hart's Army Lists; Conan Doyle's Great Boer War, 1900; Bennet Burleigh's War in Natal, 1900.] E. I. C.

WOODWARD, BENJAMIN (1815-1861), architect, of Irish birth, was articled to a civil engineer, but his interest in mediæval art led him to take up architecture as his professional work. In 1846 he was associated with Sir Thomas Deane [q. v.] in building Queen's College, Cork, which was finished in 1848. Their next joint work was Killarney lunatic asylum. Both buildings were in the late Gothic style. In 1853 Woodward entered into partnership with Deane and his son (Sir) Thomas Newenham Deane [q. v. Suppl.], and settled in Dublin, where the new library of Trinity College was built from their designs in Venetian style, 1853-7. In this building the influence of Ruskin on Woodward, his ardent admirer, was already apparent; the experiment was made of leaving sculptural details to the taste of individual workmen, who copied natural foliage in an unconventional style.

This attempt to revive freedom of design in the craftsman, in the spirit of mediæval Gothic art, was carried still further, under Ruskin's direct supervision, in the next important work of the firm, the Oxford Museum, with which Woodward's name is especially connected. A competition between Palladian and Gothic designs was decided in 1854 in favour of Deane and Woodward, whose design had been selected, with one in Renaissance style by Barry, from the work of thirty-two anonymous contributors. Their task was a difficult one, as the sum of 30,000*l.* voted by the university for the erection of the shell of the building was inadequate for the purpose; most of the ornament subsequently added was the gift of private individuals. The foundation-stone was laid on 20 June 1855, and the building was mainly completed by 1858; many details, however, remain unfinished. The museum is in thirteenth century Gothic style, strongly influenced by Venetian architecture; the form of the chemical laboratory at the south end of the building was suggested by the abbots' kitchen at Glastonbury. A fine series of shafts in the interior illustrate the principal geological formations of the British islands, while their capitals and the corbels which support statues of men of science are carved with a selection of plants typical of the British flora. The details of these carvings were left to the taste of the craftsmen, the

most skilful of whom were a family of the name of O'Shea, whom Woodward brought with him from Dublin. The same idea was carried out in the wrought-iron decoration, by Skidmore, which was freely employed in the interior. Some details of window tracery and other ornament were also designed by the workmen themselves. The experiment, though interesting as one of the earliest attempts to revive the spirit of mediæval architecture as distinguished from mere correctness in copying detail, was not altogether successful; the museum set the unfortunate example of imitating the palaces of Venice and Verona in the uncongenial surroundings of English streets.

Woodward spent half of each year at Oxford during the building of the museum; he enjoyed the cordial friendship of Ruskin and Sir Henry Wentworth Acland, and was intimate with the younger group of 'pre-Raphaelites' under the influence of Rossetti, of whom Morris and Burne-Jones were the leaders. In 1857, while engaged in building the debating-hall, now the library, of the Union Society, he gave his sanction to the unlucky experiment made by Rossetti and six of his friends of decorating the ceiling and the wall space above the book-shelves with paintings in tempera. In that year Deane and Woodward competed for the new government offices in Whitehall and Downing Street, and their design for the foreign office obtained the fourth premium, standing second among the Gothic designs, none of which were ultimately adopted. The last work of the firm was the Kildare Street club at Dublin, finished in 1861. In 1860 Woodward fell a victim to consumption; he spent the winter months at Hyères in the vain hope of regaining health, but died at Lyons on his return journey on 15 May 1861, in his forty-sixth year.

He contributed some sketches to an early volume of the 'Builder', xix. 436. A medallion portrait of Woodward by Alexander Munro [q. v.], one of the sculptors of the portrait statues in the Oxford Museum, is in the Radcliffe library at Oxford.
